Pescadero Fire Station #59

- Truebeck Construction continues to make strong progress at the jobsite. The team has completed the septic field work and installation of the septic tank. Installation of underground utilities is now underway, including electrical conduits, plumbing, sanitary sewer, and fire water line.

- The project team continues to coordinate with PG&E on the utility work. Two new power poles are expected to be installed next month to replace the leaning polls and support the undergrounding of the over-head power and utility lines in front of the future fire station.
