---

Dear Members of the San Mateo Planning Commission,

I am submitting the attached letter to express my concerns regarding the Ascension Heights Project.

Thank you for your time.

Sincerely,  
Sheila Shea  
San Mateo Baywood Resident

February 24, 2015

Dear Members of the San Mateo Planning Commission,

My family and I live at 1526 Parrott Drive, directly in front of the proposed Ascension Heights development. As residents, we are deeply concerned about the safety and well-being of our neighborhood.

At the January Hillsdale High meeting we hoped to obtain answers to many of the critical questions posed by the community of Baywood neighbors but we still feel very strongly that several key points *have not been addressed* properly by the EIR, including:

- 1) No detailed engineering analysis to examine the impact of the steep lots, several of which are up to more than 40% slope. What are the potential long-term liabilities for the county and for homeowners?
- 2) No truck route has been specified during the heavy grading period. Furthermore, the EIR determined the impact as “not significant.” However, there will be an increase of 28% of traffic during the day, which would clearly impact pedestrian safety. We are deeply concerned about pedestrian safety along any potential truck routes including streets such as Parrott Drive where there are no sidewalks. Parrott Drive is a busy street with CSM drivers, commuters, as well as pedestrians such as elderly, parents with strollers, and young students walking home daily. Pedestrians on Parrott Drive must walk on the street (rather than sidewalk) and carefully dodge traffic throughout the day. Once grading begins, pedestrians will also need to avoid the onslaught of trucks during the lengthy construction period.
- 3) No buffers provided between proposed lots and houses on Parrott Drive in the current plan. Families on Parrott Drive would experience immediate and clear loss of privacy. Any new trees planted would take roughly 25 years to provide an effective screen.
- 4) Finally we were very dismayed to learn that Baywood Neighbors would have no input on the design of the development project, once approved. How will we know what these homes will look like? How many of these will be 3 stories, hovering over our backyards? Will these homes fit in with existing homes?

We urge members of the San Mateo Planning Commission to carefully weigh these and the many significant concerns that Baywood Neighbors have expressed over the years. Clearly the majority of Baywood Neighborhoods are opposed.

Respectfully,

Sheila Shea and Family

## James Castaneda - Ascension Heights Correspondence

**Subject:** Concerns about Watertank Hill Proposal

Dear Members of the San Mateo County Planning Commission,

I am writing to you to express my strong opposition to the Ascension Heights Subdivision Project as proposed and detailed in the Final Environmental Impact Report from 12/2014. I ask that you reject this proposal. The proposal was not developed in the cooperative manner that the Commission laid out when the previous proposal was rejected in 2009. It is still too aggressive for the land and for the surrounding, existing neighborhood.

I find issue with many aspects of the FEIR. By far, however, the issue that upsets me the most is the projected air pollution. The FEIR states the air pollution will be projected to be 470% above the EPA National 24 hour standard. How can this be acceptable? The Commission cannot accept this proposal and endanger its most vulnerable and innocent residents.

Some additional issues I find with the FEIR are as follows:

-- Noise abatement. This appears to be addressed by proposing that construction activities take place within stated work hours. So unacceptable noise levels are allowed as long as they occur within the 'restrictions' of 7AM - 6PM Monday-Friday and 9AM - 5PM Saturdays? The only days that construction will not occur will be Sundays, Christmas and Thanksgiving. So the existing neighborhood will live with construction noise levels of 90dB for 6 out of 7 days a week, all day long. I cannot fathom how this is not "Less than Significant" for those of us living near the proposed site.

-- Dust complaints. The FEIR states that any dust complaints can be made by calling a posted number and must be addressed within 48 hours. This is laughable. So if I have a complaint about immediate dust conditions, I have to wait up to 2 full days for the situation to be addressed? What do you advise neighbors to do -- shut our windows for 2 days and wait?? I find this completely unacceptable.

-- Impact to SMFC School District. The FEIR concludes there are no significant impacts on the SMFC School District based on communications with representatives of the School District. These communications cite multiple references to the passage of Measure P as a means to deal with overcrowding in district and local schools. Measure P failed in November 2013. Overcrowding in the District and the impact to both Highlands and Borel is therefore incorrectly evaluated. The information in the FEIR is out of date and incorrect. This is a major issue in San Mateo and this aspect of the FEIR is unacceptable and incomplete.

In conclusion, I would like to reference the San Mateo General Plan, which calls for development to "Encourage improvements which minimize the dangers of natural and man-made hazards to human safety and property." I hope you agree that the Ascension Heights Subdivision proposal as it is currently drawn up, does not fit with the General Plan. I implore you to please vote AGAINST the Ascension Heights Subdivision on Wednesday night.

Sincerely,

Lilly Won

**Subject:** Fwd: Ascension Heights Development

Wanted to touch base with the upcoming meeting regarding the Ascension Heights Development. I wanted to reiterate the points I made below in my letter of January 27, 2015.

1. \*Environmental Concerns\*. Damaging the hill through excessive grading. Risking both property and life of existing and future neighbors.
2. \*Density\*. The proposed development is significantly more dense than the existing neighborhood. This is unnecessary and damages the character of the neighborhood. Towering structures three stories above current residents is unacceptable. \*Building codes are in place to protect neighbors from infringing on each other's normal and typical use of their property through development\*.
3. \*Quality of Life\*. Increased noise, traffic, and pollution due to excessive development. Permanent decrease in sunlight and privacy.

Please read my original email that discusses these points more fully. I fully hope and expect these plans to be put on hold permanently until a more responsible and reasonable plan can be put in place. We hope you recommend specifics to the developer such as reduced number of units, decreased excavation work, and a larger set back from the Parrott Drive neighbors, considering the daylight plane issues.

\*Subject:\* Ascension Heights Development

My neighbors have brought to my attention the building project to be done in the Ascension Heights Development.

My family and I are concerned with this on a number of levels, most importantly, long-term safety and enjoyment of our neighborhood.

1. \*Dangerous Excavation:\* Tremendous excavation and grading work is to be done on this project. Because of the high water table and delicate nature of our hill, this could destabilize existing properties and increase the likelihood of avalanche like what happened a few years ago. This is dangerous to the new owners, but also to the existing property owners whose

houses will now be BELOW the new construction. This cannot be allowed.

2. \*Character of Neighborhood:\* Size and height of the homes. Our neighborhood on Parrott is predominantly one-story ranchers, with a few two story properties. They are gracefully arranged on 80' or 100' lots. The new development is packed very tightly together on narrow lots, and the homes rise THREE stories above ground level. This changes the nature of our neighborhood unnecessarily when more generous lots and lower profiles could be utilized.

3. \*Reduced Property Values: \*Because of the size and massive nature of the proposed development, existing homeowners will experience a decrease in the values of their homes. The new construction to be built behind Parrott Drive towers above those properties, significantly reducing the resale value and enjoyment of the property. Again, this is unnecessary when more gracious lots and lower profiles could be utilized.

4. \*Quality of Life: \*Finally, the quality of life in our neighborhood will be reduced permanently. Partially, this is due to the extended construction period (26 months). More importantly, our neighbors will experience a significant decrease in sunlight and privacy in their own homes.

\*We strongly recommend against this project as it currently stands. We recommend the developer explore alternative proposals reducing grading, reducing building height, reduced units, and taking into consideration the concerns his neighbors have raised. Again, most important is the long-term safety and enjoyment of our current and future residents.\*

RE: Ascension/Watertank Hill Project

February 19, 2015

Dear Planning Commission,

I have been diligently trying to understand the storm drainage system and how the system will implement the requirement stated by the county that the project generate ZERO NET NEW INFLOW to the existing storm drainage system.

The problems encountered so far:

1) The **EIR AND FEIR are at odds with the county staff report** in that the specified system in the EIR and FEIR is a 20-tank system. The county report is a 23-tank system. I am assuming the latter is the correct system, as it seems to be the better documented.

The **EIR and FEIR were also missing the crucial diagram (Figure 3.4)** on the stormwater system that would show the system planned. We received the county report one week before the 1st planning commission meeting giving us virtually no time to understand the system assuming that is the system to be built. However, even the county report did not specify key characteristics of the system. **Neither the FEIR nor staffs report showed the Hydrology report, which would confirm the requirements were actually met.**

**CEQA textbook handbook [http://www.ucop.edu/ceqa-handbook/chapter\\_03/3.3.html](http://www.ucop.edu/ceqa-handbook/chapter_03/3.3.html) states that EIRs should requires planning for 100yr events and calculate increases in stormwater runoff from the proposed project.**

2) When questioned about the sizing and flow rate calculations we were referred to the engineering company, which said, they had produced such a report. The staff report simply stated as fact but did not show the work that the system envisioned actually achieved the objective as required by CEQA. Jim Toby of the engineering company employed by the applicant said it had done the requisite work.

When we asked the county which should have included the more detailed report in the EIR and FEIR and **which James Castenada thought was in the FEIR we discovered it was not.**

I asked James for the report that Jim Toby had said was done but finally I was only able to get a copy from the engineering company well after the planning commission meeting. When I finally got the report for which there was no explanation why it was not included in the FEIR I discovered it **only covers 40,000 sq ft of the 90,000 sq ft of impervious area being created** by the project. It is less than half the required report. The explanation is that the system has been sized to compensate for the flow expected from the other 60% of the impervious area, however, this is a method that I have not seen in any other hydrology report. It is not clear that there is sufficient water to be collected at the houses to compensate for the road or that the pattern of road runoff would not cause problems for the drainage system or increase net inflow at certain points in the storm.

It is clear after reading the Hydrology report that the system is designed for a particular type of storm of a certain intensity and duration. It is clear that other storms would yield potentially very different results with considerable increase in runoff. There are assumptions in the report that are not justified for instance the Tc of 10minutes seems a guess. They refer to frictional assumptions but never show calculations how they arrive at Tc=10min. For a construction project that has impact on 600 residents it is interesting that the developer is allowed such leeway in doing the

hydrology study and what appears any lack of critical assessment. A peer report is clearly called for as was done for instance at Laurel Way in Redwood city and other high impact projects.

In other words the **hydrology report DOES NOT show that the system will achieve the requirements of the project to achieve ZERO NET INFLOW as stated in the staff report and FEIR.**

This contrasts with several other EIRs I have found in the area done recently which have full hydrology reports for all impervious land done for 100 yr storms and included in the EIRs. These include precise sizing and calculations of runoff from all structures. The project at Laurel Way, Redwood City includes a detailed 82-page report calculating all the flows from the impervious structures and a peer review study of the drainage system by an independent group. The systems are similar to the ones proposed for this project but do not include a ZERO Net inflow requirement and DO NOT have 90,000 sq ft of impervious structure. I have included several EIR reports below with full hydrology calculations.

A final point is that the novel way they have for compensating for the road by overbuilding the housing system is not something I have seen in other hydrology reports and would be a separate additional good reason to have a peer report from another independent Engineering firm or firms picked by someone other than the applicant.

3) When asked to provide "comparable" projects we could see that had 90,000 sq ft or larger new impervious land, ZERO NET INFLOW requirement, on 40% slopes on type C land or worse we were told there were loads of comparables. Hundreds even thousands of use cases. However, after 14 days of repeated requests no comparables have been forthcoming. I have to conclude that this has never been tried before or at least the **county or applicant has no experience of or knowledge of any comparable project** utilizing this system involving storing hundred(s) of thousands of gallons on hillsides.

4) All the EIRs in the area including Menlo Park, City of San Mateo, Laurel Way that I have found include 100-year storm planning. I have looked at a dozen EIR's now and they all include planning for 100-year and sometimes 500-year storms and include detailed storm water calculations with specific sizing of the systems when such systems were called for.

The county has asked for only 10-year storm planning. When the community asked for 100-year storm planning we were met with resistance. Yet, we got a 10-year storm just a month ago and with global warming we may get more storms larger than 10-year storms more often. How can this be reasonable policy? CEQA guidelines seem to clearly specify that 100-year planning is required for water storms. **In fact I have not found ANY EIRs which use only 10 year storm planning.**

Jim Toby told us that the county told him NOT to run a 100-year hydrology report. Interesting. Maybe these reasons are why the report was not included in the FEIR as required by CEQA since the report was incomplete and was for 10 years not 100 years.

CONCLUSION

It is hard to understand how the FEIR can be considered adequate since it doesn't meet a key requirement set forth in the EIR and the project guidelines to provide zero net inflow to the existing stormwater system.

We don't know the environmental consequences from the existing system in either a 10-year event other than the single event studied or 100-year event in contradiction to CEQA standards.

It is disturbing that since the community called out for more transparency and information in the EIR comments 6 months ago that the FEIR is completely vacant when it comes to more detail, omits key documentation that is referenced in the FEIR, that documents such as the incomplete hydrology report were not included as required.

Whether these omissions were by accident or on purpose is unclear but it is clear that we called for such information, the county had some of the information and in every case we were rebuffed, provided the information late after we insisted and even when the information was finally provided it turns out to be 40% of the required information.

I would respectfully ask the planning commission to deny approval of this project for the 5 reasons below:

- 1) Case Studies or Examples of similar system implemented which requires the storage of 100(s) of thousands of gallons of water on slopes not provided.
- 2) A complete hydrology report with all calculations for all impervious land, sizing and flow rate calculations prior and after the buildout was not done.
- 3) An analysis for 10-year and 100-year events was not done.
- 4) A peer review report of the system was not done.
- 5) Confirmation of zero net inflow requirements to existing drainage system is not possible with the report.

---

Yours respectfully,

John Mathon

---

Dear Planning Commission members;

I'd like to start by thanking you for your attention to the proposed development of Water Tower Hill. I appreciated your review of the proposal and your questions for the developer and his team at the January 28<sup>th</sup> session at Hillsdale High. I attended this meeting with others from my neighborhood, Baywood Heights. You asked thoughtful, informed questions. My name is J. Radov Martin and live at 2054 King's Lane.

Though I will attend today's hearing at 9:00, I'll be unable to stay if the hearing of this issue is delayed. I'm sending this letter to ensure my opinion is expressed.

My view is this: if further development in the hilly neighborhoods were possible, it would've happened long ago. Please uphold the original plan to leave this rocky promontory, Water Tower Hill, alone. The underground drainage, 3-story homes and steep streets are NOT reasonable concepts.

I also want to comment on the tactics of the developer: he has not been completely truthful in his communications and proposals. An example: his plan, reviewed on January 28, stated that walking trails would be created on Water Tower Hill. Your questioning on this date revealed the complete truth: these trails will NOT be accessible to the community because they are surrounded by privately-owned homes.

There is real risk associated with this development, and his proposal is to shift responsibility for inevitable unplanned mishaps to the homeowners' association created for Water Tower Hill homes. Again, this is not responsible. He paid very little for this land due to the ruling that it could not be developed. Please uphold the original ruling that further development in hilly neighborhoods is NOT reasonable or possible.

Thank you,

J. Radov Martin

Hello All,

I am appalled that Dennis Thomas said he wasn't aware he had to fill out a slip in order to speak. After all these meetings , he had the audacity to say that! He spoke at the last meeting...and all prior meetings.

We were not allowed to have the same people speak again.

The facts haven't changed. The hill is not a magic mountain that changes its properties on his section of land. He is dragging out the inevitable.....we are a persistent educated large group of homeowners who care deeply about our neighborhood and have the facts on our side. He cannot, should not be allowed to sweet talk his way out of this .

Please help support our positions,

Sincerely,

Dr. And Mrs. Stephen A. Mikulic

**Subject:** Water tank hill  
**Attachments:** San Mateo County Planning Commission. response to 2-25-15 meet.doc; Part.002

Response to both the meeting on Feb. 25, 2015 and the Mercury news article. Please take note of the response as from several of us on CSM Drive.

Additionally, we agree that the proposed 19 homes on that fragile site (and it is - contrary to Mr. Thomas' imperfect analysis). It "is still too big." commissioner Laurie Simonson felt that there could be a development of lesser magnitude but worried about "unlawful taking of private property." What are the parameters of "eminent domain"? Mr. Thomas' reluctance to meet the criteria for the FEIR, EPA etc standards, a veiled threat of a lawsuit, and unwilling to scale down the project - show he is resistant to "working with the community". Big Business does have a responsibility to the community - if it wants to stay in business - that IS what business/trade is all about.

## San Mateo County Planning Commission

February 25, 2015

We residents who were prohibited from attending the 9:00am meeting today (jobs, etc) were waiting this evening with hope to hear that the Board would decide that the developers of Water tank Hill had not provided anywhere near enough factual information to make a decision on the property- which would protect the property itself and the surrounding neighborhoods.

We understand that there are also multiple interests to be considered:

- the atmosphere that would welcome business into San Mateo County and the tax base that would ensue;
- the health (physical and mental) and well-being of the residents who are your constituents;
- the use and maintenance of our shrinking open space;

These are in conjunction with all the past presentations of options. Today, the protocol was established that there could only be new speakers, new evidence/facts and a redirect on the issues the Board sought about erosion. Apparently, there was a 'breach' of this and the project staff was able to 'sweet talk' the Board (reporter's viewpoint to us) with ideas/pleas but no real facts during the phase of voting. This lack of protocol caused much consternation among the residents who respected the directions of the Board and abided by them. And to add to the community's last report with: *All the major issues which will adversely affect our health, our safety, and our property remain. We **DISAGREE** with the developer and the Final Environmental Impact Report that the hillside stability, risky storm water drainage system, air pollution, and the dangerous "blind spot" intersection at Bel Aire are **LESS THAN SIGNIFICANT. (the developer has not addressed these to the extent past home neighborhoods were required to meet)***

*Finally, there was much concern about the liability that the new homeowners association (19 members or less) will be saddled with if there is a landslide, erosion, or failure of the storm water drainage system. What happens if this new homeowners association cannot pay for these huge repair costs? Additionally, how long will it take/years for the completion of this projects' independently built homes? (without recourse from the residents or the Planning Board) Therefore, how long before there is a*

cohesive HOA to take responsibility for their property [and any damage to ours?](#)

As stated by residents who have impressive, professional credentials to support their facts (equal or surpassing the developer's consultants) the presentations by the developer do NOT come close to satisfying even the base line government requirements for a Civil Engineering project of this magnitude. It truly feels like a "snatch and grab" of land for the enrichment of a few at the cost to the residents of San Mateo County - supported by today's report from those there. It was frustrating. Please review the facts and lack of facts/homework by the developer. Demand that there be a complete, accurate and environmentally supportive civil engineering report from the project group. There is not any rush to completion, but there is a NEED to have whatever is done to this property be the best it can be! Why have a shoddy and dangerous site when the site can be truly a prize that would reflect careful, detailed planning by the Planning Commission? And also protect the existing residents – Of course, the continued use of the property – "as is" would be the best choice. In lieu of that, you are in the position to DEMAND that the details be completed BEFORE the Board calls any more decisions on this.

---

Ooops, looks like you mis-typed my email, forgot the "s" in Wilson so they go to the boss. I will have a cost to you tomorrow. Been a rough couple of days.

The multiple surveys were brought up in the first hearing and it would be a good idea to provide a staffing report that gives the whole picture. Because the nature of identifying species, even if surveys were conducted every year for 10 years, there still needs to be a final survey before construction unless it just isn't possible for the species to be present. We can add this information to the existing setting of the biological discussion.

Measure P looks like a bond measure but we state in the analysis that while the personal communication from the district states that the project would not impact schools (and the district brought up Measure P) we explicitly state that the Impact Fee will reduce impacts and that in the discussion of the existing setting we note that "Government Code §65996 states that the development fees authorized by SB 50 are deemed to be "full and complete school facilities mitigation." So we don't rest on conclusion on Measure P. Both districts flat out states in our personal communication that the project would not impact the school district. The City district does state that cumulatively schools could be beyond capacity. But as stated above, that is what the mitigation impact fees are for. Measure P was a bond measure to borrow money to speed up the process, but the developer is covered from impacts by paying the impact fees. We will update this section with the most recent information and discussion and expand upon the impact fee discussion.

The alternatives discussion is pretty straight forward; the no action alternative (alternative A) would be the environmental superior alternative because there would be no construction on the site. Alt C would be the environmentally superior development action, since only 6 lots would be developed. Maybe the Commissioner mistook seeing Alternative A as meaning the Proposed Project instead of as the first alternative to the Proposed Project? Here is the text from the EIR:

"Generally, the environmentally superior alternative is the alternative that would cause the least damage to the biological and physical environment. Since implementation of the No Project Alternative would result in the fewer adverse environmental effects than would occur under the Proposed Project and other alternatives, Alternative A - No Project/No Development Alternative would be considered the environmentally superior alternative. However, the No Project/No Development Alternative would not achieve any of the project objectives.

If the No-Project Alternative is the environmentally superior alternative, CEQA *Guidelines* Section 1526.6(e)(2) requires identification of an environmentally superior alternative among the other alternatives considered in the EIR. When comparing the remaining development alternatives, Alternative C, the Alternative Design Alternative, is the most environmentally superior alternative. Under Alternative C, development of fewer housing units on larger lots with increased open space would achieve some of the project objectives. Development of Alternative

C would result in lesser impacts than the Proposed Project in six issue areas, similar impacts to the Proposed Project in three issue areas, and greater impacts in one issue area.

**Subject:** Ascension Follow Up

Good afternoon Trent,  
Based on some of our initial conversations internally and with the applicant, I have a few things I wanted to check in with you and give you an idea of what we're looking at so far.

After speaking to Dennis, we don't expect too many changes other than minor altering to the entrance to the site (to provide some more space from Mr Mathon's property). He did indicate that he's having the biologist go out there right now to do another survey, so we can expect that to coming in the next few weeks.

For what we need now concerning the EIR, we have so far the following items/areas that we think will need to be address/edited:

1. Biological Resources- According the applicant's biologist, there were more surveys conducted that weren't reflected in the EIR. I asked them to provide all the previous surveys in additional to the one they're conducting as we speak. We'll need to include their surveys the help with the analysis (which I suspect will result in the same conclusion).
2. School Impacts- Per the feedback regarding Measures P, we'll need to make sure we need to clarify the impact absent of that measure using all current assumptions. We'll be working with the applicant to figure out what the estimated fees will be that he'll be obligated to pay as part of developing and clarifying the requirement. But for the purposes of the EIR, we'll need to have that discussion revised.

3. Environmentally Superior Alternative- Per the Commission's comments, we'll need to clarify this a bit more. If not as part of the EIR text, perhaps as part of some proposed language staff can use within a report when we return back to the Planning Commission.

That's all I had regarding possible edits/additions to the EIR, and of course any you identified as well. Aside from the EIR, I think our approach the next time is having as much information to provide clarity on the issues we were anticipating to answer in person within a report. So, I think we'll need to help in providing clarification in the areas commonly mistaken not to be addressed (air quality for example), and documents utilized to make an adequate environmental assessment.

What we'll need is an estimate of time and cost to perform these. Right now, the best estimate we have June for the next Planning Commission hearing.

If you want to chat about it over the phone, I'm available Monday after 8am. Thanks Trent.

James

Planner III - San Mateo County Planning & Building Department  
Program Coordinator - SFO Airport/Community Roundtable

455 County Center, 2nd Floor  
Redwood City, CA 94063  
T 650.363.1853 | F 650.363.4819  
[planning.smcgov.org](http://planning.smcgov.org) | [sforoundtable.org](http://sforoundtable.org)

1. Please confirm if this is correct or edit as necessary: Aragon High School, located at 900 Alameda de las Pulgas in the City of San Mateo, serves the project site and surrounding area.

Yes, Aragon High School would be the assigned school.

2. What is the current enrollment at Aragon High School (or whichever high school that serves the project area)? Is enrollment below, above, or at capacity?

The current enrollment at Aragon is 1,444 students. The school is at capacity.

2a. If SMHUSD high schools are above capacity, what measures does the District employ to address this issue?

Below is some of the verbiage for Board Policy 5116-School Attendance Boundaries, which addresses what the Superintendent or designee does every year to review the capacity for the district.

The District Board Policy 5116 states "The Superintendent or designee shall periodically review school attendance boundaries and, as necessary make recommendations to the Board for boundary adjustments. When reviewing school attendance boundaries, the Superintendent or designee may consider the following factors to ensure boundaries align with approved facility capacity. 1) School enrollment data 2 ) Facility capacity and design, including potential commercial and residential developments 3 ) School feeder patterns 4) Federal, state, or court mandates 5) Community input 6) Student safety 7) Transportation capacity 8) Community and neighborhood identity 9) Geographic features of the district 10) Educational programs 11) Other factors. In order to alleviate overcrowding, the Superintendent or designee shall place some students in a school outside of their attendance area. Parents/guardians of students who are attending schools outside of their attendance area shall be notified of the school their child will be attending as soon as possible. (To read more on Board Policy 5116-School Attendance Boundaries go to the district website and on the homepage click on "Board Policies."

3. Are there any current plans to upgrade, improve, and/or expand Aragon High School (or whichever high school serves the project area)? Would these plans increase capacity?

Aragon High School, as well as all the district high schools, has had upgrades and improvements. There are no plans to expand Aragon High School.

4. Based on the above description of the proposed project, will serving the residents of the proposed project have a significant impact on the SMUHSD?

No, it will not have significant impact on the San Mateo Union High School District.

5. In addition to addressing project-specific impacts to SMUHSD, the EIR will also address cumulative impacts to SMUHSD. We are in the process of compiling a list of reasonably foreseeable development in the County. Table 1, Related Projects List, includes a list of some of the other major, reasonably-foreseeable approved development in the County in proximity to the proposed project's location. However, additional projects will likely be added to the list as our research continues. Can the Department accommodate the demand for SMUHSD associated with the development of these projects in conjunction with the proposed project?

We are seeing severe growth in the southern part of the district and we are anticipating the growth by expanding three high schools, Burlingame High School, Hillsdale High School and San Mateo High School, to accommodate the increase.

6. Do you have any recommendations that might help reduce any potentially significant impacts to the SMUHSD generated by the proposed project?

No, we do not have any recommendations.

7. Please confirm if this is correct or edit as necessary: As of July 1, 2012, the SMUHSD will collect School Impact (also known as Developer) Fees for the San Mateo-Foster City School District. The fees are \$1.28 per square foot for residential construction.

Yes, this information is correct. The SMUHSD collects Developer Fees for the San Mateo/Foster City School District at \$1.28 per square foot for residential construction.

**FROM:** Mr. Trenton Wilson, Senior Project Manager

**DATE:** March 11, 2015

**RE: Cost Estimate for Continued CEQA Compliance Services**

---

In accordance with the *Agreement Between the County of San Mateo and Analytical Environmental Services* dated May 7<sup>th</sup>, 2013 (Agreement), AES completed an Environmental Impact Report (EIR) for the Ascensions Heights Subdivision Project (County File number PLN2002-0517) and attended the Planning Commission Hearing on January 28, 2015 for the potential approval of the EIR and other project-related planning considerations. Due to the length of time spend on public comment, the hearing was adjourned and set to reconvene on February 25, 2015. AES Senior Project Manager attended the reconvened Planning Commission Hearing on February 25<sup>th</sup>, 2015; however, no final decision on the EIR or Applicant's requests was made. Based on the Commissioners' comments at the February 25<sup>th</sup> Hearing, AES understands the Applicant has made minor changes to the project and that there now exists an opportunity to address some of the Commissioners' comments in the Final EIR since the document has yet to be certified.

The County has requested AES present a budget to revise the Final EIR (and subsequent revised Draft EIR contained there within) based on comment received from the Planning Commission (subsequently several of the comments are driven by those presented by the General Public). Each issue area is presented as a line item cost to allow the County to determine the exact level of effort for AES to revise the Final EIR. In addition, AES has included line items to attend a future Planning Commission hearing and a Board of Supervisors meeting.

#### **COST ESTIMATE FOR ADDITIONAL CEQA COMPLIANCE SERVICES**

1. Air Quality-AES will revise the discussion of the Health Risk Assessment results to address commenters' concerns regarding the results presented in the discussion in the Draft and Final EIR for a not to exceed time and materials cost of **\$980**.
2. Traffic-AES will revise the discussion of construction traffic to clarify the assumptions utilized in determining the number of construction vehicle trips to address commenters concerns regarding traffic safety. This task will be completed for a not to exceed time and materials cost of **\$555**.
3. Biology-AES will add to the discussion of the history of site surveys conducted on the site as well as include results from recent surveys to address commenters' concerns regarding impacts to biological species presented in the discussion in the Draft and Final EIR. AES will also expand upon the reasoning for the mitigation to clarify that mitigation is not being deferred. These tasks will be completed for a not to exceed time and materials cost of **\$1,080**.
4. Public Services, School Impacts-AES will revise the discussion of impacts to schools emphasizing that the payment of impact fees mitigates the projects impacts in accordance with State law to address commenters' concerns that the significance statement in the discussion of impacts to schools in the

Draft and Final EIR relied on a failed proposition. This task will be completed for a not to exceed time and materials cost of **\$720**.

5. Environmentally Superior Alternative-AES will revise the discussion of the Environmentally Superior Alternative in accordance with comments provided by the Planning Commission for a not to exceed time and materials cost of **\$540**.
6. AES will prepare a Revised Final EIR and submit to the State Clearinghouse to follow the distribution cycle conducted on the previous Final EIR for a not to exceed time and materials cost of **\$1,020**
7. AES will attend a Planning Commission hearing at a time and place to be determined for a not to exceed time and materials cost of **\$1,980**.
8. AES will attend a Board of Supervisors meeting at a time and place to be determined for a not to exceed time and materials cost of **\$1,980**.

#### Assumptions

- The applicant will not alter the site plan in such a manner that would result in a new significant impact that wasn't identified in the Final EIR or increase the severity of a significant impact identified in the Final EIR.
- An attendance requirement of four (4) hours is anticipated for each event.
- Each meeting will be attended by the Senior Project Manager. Additional staff can attend if requested at an additional cost.
- The County will provide AES with a determination of the tasks above to be implemented and AES will provide a final cost estimate based on the selection of tasks.

Re: Public Records Act Request for Ascension Heights Subdivision Project

Dear Mr. Church:

This firm represents Baywood Park Homeowners' Association ("Baywood") with respect to the proposed Ascension Heights Subdivision Project ("Project"), which is currently under consideration by the County Planning Commission. Pursuant to the California Public Records Act,<sup>1</sup> we are seeking to review the County's non-privileged files related to the Project to ensure that Baywood has a complete record of relevant materials. Thus, we hereby request that the City provide us with copies of, or make available for copying, all documents listed below that are not already available on the County's website for the Project (<http://planning.smcgov.org/ascension-heights-subdivision-project>).

1. Any and all correspondence, memoranda, email communications, and other records or writings prepared, owned, used, referenced or retained by the County in connection with the Project. This request includes, but is not limited to, all documents, records or writings presented by the Project applicant to the Planning and Building Department since February 25, 2015. This request also includes, but is not limited to, any draft findings in support of the Planning Commission's denial or approval of the Project that have been presented to the Planning Commission.

---

<sup>1</sup> See Gov't Code § 6250 *et seq.*; Cal. Const. art. 1, § 3.

For the purposes of this request, the term “records or writings” includes any “handwriting, typewriting, printing, photostating, photographing, photocopying, transmitting by electronic mail or facsimile, and every other means of recording upon any tangible thing any form of communication or representation, including letters, words, pictures, sounds, or symbols, or combinations thereof, and any record thereby created, regardless of the manner in which the record has been stored.” Gov’t Code § 6252(g). A “record or writing” also includes all appendices and exhibits referred to in the document. The term “or” means “and/or.”

Pursuant to Government Code section 6253(c), please make a determination on and respond to this request within 10 days of your receipt of it. If you determine that any of the information is exempt from disclosure under the Public Records Act, we ask that you ensure that your determination is consistent with Proposition 59, enacted on November 3, 2004. Proposition 59 amended the state Constitution to require that all exemptions from disclosure of public records be “narrowly construed.” Cal. Const. art. I, § 3(b)(2).

If you nonetheless determine that the requested records are subject to an exemption that remains valid after enactment of Proposition 59, we further request that: (1) you exercise your discretion to disclose some or all of the records notwithstanding the exemption; and (2) pursuant to Government Code section 6257, with respect to records containing both exempt and non-exempt content, you redact the exempt content and disclose the rest.

Finally, should you deny part or all of this request, you are required, pursuant to Government Code section 6255, to provide a written response describing the legal authority or authorities on which you rely. If such a response is necessary, please also address how your claim of exemption is consistent with Proposition 59.

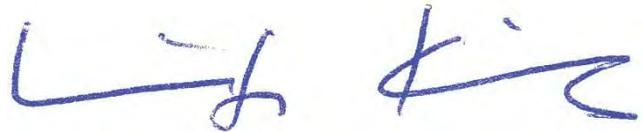

If we can provide any clarification that will help expedite your attention to this request, please contact us at (415) 552-7272. **Please do not perform any duplication before notifying us and allowing us to review the documents, so that our client may decide which records should be copied.** If you maintain any of these documents in an electronic format (e.g., e-mails, PDFs, excel spreadsheets), please provide them to us in that format.

Mark Church  
March 24, 2015

Re: Proposed Denial of Ascension Heights Subdivision Project

Honorable Members of the San Mateo County Planning Commission:

This firm represents Baywood Park Homeowners' Association ("Baywood") with respect to the proposed Ascension Heights Subdivision Project ("Project"). We submit these supplemental comments in support of the Commission's stated intention to deny the Project as it is currently proposed. The issues you raised at the hearings on this Project reflected the community's serious environmental and safety concerns. In response to staff's suggestion that the Commission include findings along with a resolution denying the Project, we have also prepared draft findings, based on evidence in the administrative record, and attach them to this letter.

Environmental Impacts and Safety Concerns. During the February 25 hearing, Commissioners raised a number of fundamental concerns about the Project. For example, several Commissioners noted that the Project is too dense for the site and surrounding community. As Commissioner Hansson noted, the proposed layout fails to conform to the contours of the hillside. Bel Air is not safe under current conditions and would become even more treacherous with the addition of a blind entrance to the new development. And there is inadequate information in the EIR about the availability of water to serve this new development and the existing community. Commissioner Kersteen-Tucker correctly noted that there is far too little detail about the Project design or proposed mitigation measures to judge what the impacts will be or whether mitigation will be effective, and the EIR failed to adequately analyze the Project's impacts to schools. In addition, several Commissioners noted the potential aesthetic impacts of developing 36-ft-high homes on top of a steep hillside. These impacts will undoubtedly

be significant and cannot be mitigated through tree-planting and landscaping alone. Baywood and other members of the community have raised similar concerns and agree with the Commissioners on all of these points.

The EIR Is Inadequate and Cannot Be Certified. Baywood also continues to have serious concerns about the adequacy of the EIR for the Project. Of course, if the Commission moves forward with a denial of the Project, it need not certify the EIR. *See* Pub. Res. Code § 21080(b)(5) (projects that are denied by a lead agency are not subject to California Environmental Quality Act (CEQA)). In this instance, however, the Commission *cannot* legally certify the EIR because that document contains numerous, substantial flaws, including illegal deferral of analysis and mitigation, unsupported conclusions, and a general failure to adequately describe the Project’s significant environmental impacts. *See* Letter from Winter King to Planning Commission (Feb. 24, 2015); Hearing Audio File (Commissioner Simonson noting that the FEIR is lacking basic mitigation measures and adequate analysis, especially in the chapters discussing biological resources and alternatives); *see also* DEIR at 4.3-20 – 21 (analysis of the extent and severity of impacts to special status species and Mission blue butterfly deferred; mitigation measures 4.3-1 and 4.3-2 direct Applicant to perform focused surveys *after* project approval); DEIR at 4.10-27 (stating that the sewer pipelines that would serve the proposed Project are already over capacity; mitigation measure 4.10-3 generically states that the applicant shall offset the increase in sewer flow by reducing the amount of infiltration and inflow (I & I), but fails to provide any details on how this will be accomplished or whether it is feasible).

Inconsistency with Natural Hazards Policies in General Plan. After conducting additional review of the materials presented to the Commission at the February 25 hearing, we have concluded that the Project is also inconsistent with several of the General Plan Policies found in Chapter 15 (Natural Hazards). In 2009, the Commission concluded that an earlier version of the Project was inconsistent with these policies, which direct the County to avoid siting structures “in areas where they are jeopardized by geotechnical hazards, where their location could potentially increase the geotechnical hazard, or where they could increase the geotechnical hazard to neighboring properties.” Policy 15.20 (a). This policy also directs the County to “avoid construction in steeply sloping areas (generally above 30%)” “wherever possible.” Policy 15.20(b).

In its January 28, 2015 report to the Commission, staff reversed course, stating that this conclusion was “incorrect.” Staff Report at 9. Staff now believes that (1) these policies only apply to projects proposed in formally identified “geotechnical hazard

areas” and (2) the Project is not located within such an area because it is not within the Alquist Priolo Hazard Zone. *Id.*

Staff’s new conclusion is inconsistent with the plain meaning of the General Plan. While policies 15.20(a) and (b) are both under the heading “Review Criteria for Locating Development in Geotechnical Hazard Areas,” it does not appear that this heading was intended to preclude the application of these policies outside areas that are formally designated as “Geotechnical Hazard Areas.” In fact, if the County had intended the heading to have such an effect, the language in Policy 15.20(c) specifying that it applies only to roads and trails “into or through geotechnical hazard areas” would be entirely redundant.

Moreover, staff’s suggestion that “geotechnical hazard areas” include only those areas within the Alquist-Priolo Hazard Zone also conflicts with the General Plan. In fact, the General Plan defines “geotechnical hazards” as “non-seismic unstable conditions, including but not limited to landsliding, cliff retrenchment, erosion, subsidence, soil creep . . .”. It then defines “geotechnical hazard areas” as “areas that meet the definition of geotechnical hazards, *including but not limited to* . . . [t]he areas illustrated on the Natural Hazards map as Alquist-Priolo Special Studies Zones, Tsunami and Seiche Flooding Areas, Coastal Cliff Stability Areas and Areas of High Landslide Susceptibility.” General Plan Policy 15.9 (emphasis added).

Reading these policies together, it appears that the County was right the first time: Policies 15.20(a)-(b) *do* apply to the Project because the Project site is subject to geotechnical hazards, including significant erosion, and some of the proposed residences would be located on lots with slopes greater than 30%. In addition, the County’s landslide map depicts several areas of existing landslides in the immediate vicinity of the Project site. *See* San Mateo County Hazards, Existing Landslides, *available at* <http://planning.smcgov.org/documents/san-mateo-county-hazards-existing-landslides>. The Project’s inconsistency with these policies provides another basis for denying the proposed tentative map.

Denying This Project Does Not Prohibit All Development. Finally, denying this Project as it is currently proposed does not mean that the Commission is prohibiting any and all development on the Project site. This Project first came before the Commission in 2008-2009. At that point, the Commission gave the Applicant clear direction about changes that would have to be made to develop this severely constrained property: “1) provide more moderate-sized housing, 2) address the concerns about avoiding building on the steep south facing slope, and 3) develop a new design that could

minimize negative impacts.” Jan. 28, 2015 Staff Report, Attachment E, p. 2. Additionally, Commissioner Slocum shared a conceptual map with the Applicant, on which she indicated the need for a trail and/or buffer between the proposed development and existing homes on Parrott Avenue.

With the exception of reducing the number of units from 25 to 19, the Applicant has not followed these directions. The proposed Project still has four units on the south-facing slope of the Project site (with three more on the southern edge of the ridgeline); the houses are still 36 feet high and cover up to 40% of each lot;<sup>1</sup> the design continues to force a square-grid layout on top of extremely steep and irregular land, requiring tens of thousands of cubic yards of cut and fill, and; there is no buffer between the proposed development and existing Parrott Avenue homes. The Commission can and should require the Applicant to address these issues.<sup>2</sup>

In sum, Baywood strongly supports the Commission’s stated intention to deny the proposed tentative map for all of the reasons identified by you and the public. To assist the Commission in finalizing its decision, we are attaching proposed findings, based on evidence in the record, that would support Project denial.

---

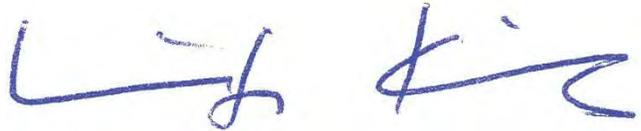

<sup>1</sup> Neither the Project Description chapter of the EIR nor the staff report informs the public of how many square feet each of the proposed houses could be. However, with lots varying in size from 7,500 square to nearly 16,000 square feet, the resulting houses could be enormous. For example, a three story house built on 40% of a 7,500 square foot lot would be close to 9,000 square feet. Performing the same calculation on the 16,000 square foot lot results in a 19,000 square foot residence.

<sup>2</sup> The Applicant also failed to follow the Commission’s clear direction to work with the community to develop a more suitable design. Although there have been public meetings on this Project, the Applicant has made it clear to those in attendance that he had no intention of modifying the Project in response to the community’s concerns.

**Ascension Heights Subdivision:**  
**Recommended Findings in Support of Project Denial**

Regarding the Environmental Review, Find:

1. That a project denial is not subject to California Environmental Quality Act (CEQA), and therefore the request to certify the EIR is also denied. *See* Pub. Res. Code § 21080(b)(5). In addition, the Commission has reviewed the Final Environmental Impact Report (FEIR), and has found that it is inadequate in the following ways:

(a) It does not include adequate analysis of the Project’s potential impacts to biological resources. Rather than conducting the required analysis now, it defers the analysis until after Project approval and likewise defers development of mitigation measures. This deferred analysis appears in other chapters of the EIR as well, including:

- Aesthetics. *See* RDEIR at 4.1-14 (noting that the Landscape Plan and Tree Replacement Plan—the only proposed mitigation for the project’s aesthetic impacts—need not be developed until after project approval).
- Geology and Soils. *See* RDEIR at 4.4-12 and 4.4-13 (deferring the development of an erosion control plan and the adoption of specified “erosion control BMPs” until after project approval and failing to provide any substantial evidence that these measures would mitigate erosion impacts to a less than significant level).
- Hydrology. *See* RDEIR at 4.10-27 (failing to provide any details about how the project applicant will achieve sufficient reduction in infiltration and inflow in order to mitigate the effect of increased discharge to an already over-burdened sewer line).
- Traffic. *See* RDEIR at 4.11-10 (proposing a handful of non-mandatory design suggestions to mitigate the traffic impacts associated with a hazardous intersection).

(b) The EIR incorrectly concludes that the Project will not have a significant aesthetic impact even though the photo simulations plainly show the impacts will be significant from nearby public streets. The Commission has not been presented with a landscape plan and thus has no basis to conclude that landscaping alone will reduce these impacts to a level of insignificance.

(c) Members of the public have identified additional flaws in the EIR, including repeated instances of the failure to adopt enforceable mitigation measures. For example, the requirement of a 250-foot buffer around active raptor nesting sites is unenforceable because it can be disregarded if the buffer is “impractical” or “unfeasible.” In some instances, the FEIR fails to support its findings of less than significant impacts with substantial evidence, for example, by basing its analysis of biological impacts on poorly timed and inadequate surveys of existing biological conditions. The document likewise

contains inadequate analysis and mitigation of impacts to geology and soils, air quality and greenhouse gas emissions, hydrology, noise, and traffic.

Regarding the Major Subdivision, Find:

2. That the proposed map is inconsistent with the applicable County general and specific plans. According to the EIR, the subdivision will cause significant adverse impacts to wildlife and associated habitat, such as impacts to raptor nesting and foraging sites and impacts to special status species such as the Mission blue butterfly. As noted above, the EIR fails to identify adequate, enforceable, and concrete mitigation measures for these impacts. As a result, the proposed subdivision violates General Plan Policies 1.23 (Regulate Development to Protect Vegetative, Water, Fish and Wildlife Resources), 1.24 (Regulate Location, Density and Design of Development to Protect Vegetative, Water, Fish and Wildlife Resources), 1.25 (Protect Vegetative Resources), 1.27 (Protect Fish and Wildlife Resources), 1.28 (Regulate Development to Protect Sensitive Habitats). For the same reason, the proposed subdivision would also cause severe, unmitigated impacts to the area's hydrology and soils. These impacts violate the following General Plan Policies: 2.17 (Regulate Development to Minimize Soil Erosion and Sedimentation), 2.23 (Regulate Excavation, Grading, Filling, and Land Clearing Activities Against Accelerated Soil Erosion), 2.25 (Regulate Topsoil Removal Operations Against Accelerated Soil Erosion), 2.29 (Promote and Support Soil Erosion Stabilization and Repair Efforts); and 16.2 (Reduce Noise Impacts Through Noise/Land Use Compatibility and Noise Mitigation). Finally, the proposed map would permit development of large residences on steeply sloped lots subject to severe erosion in direct violation of General Plan Policies 15.20(a) and (b). *See* General Plan Policy 15.20(a) (avoiding siting structures in areas where they are jeopardized by geotechnical hazards or where they could increase the geotechnical hazard to neighboring properties); 15.20(b) (avoid construction on steeply sloping areas in Geotechnical Hazard Areas).
3. That the site is physically not suitable for the type and density of residential development proposed there. Although the site is physically suitable for some residential development, it is not physically suitable for the density or size of residences proposed. The site is constrained by severely sloped hillsides and the Project, as proposed, would require extensive grading. The Commission has reviewed the Project, the site, and the materials in the record (including the alternatives analysis in the EIR), and believes that a less dense development could be proposed that would fit more naturally within the contours of the site and require far less grading. This reduced grading will also reduce construction-related impacts, including truck traffic on the already congested Bel Aire Avenue, the admittedly significant noise impacts, etc. A reduced density alternative would also reduce the amount of new impervious surface created on the Project site, and thus would reduce the Project's stormwater runoff, water quality, and erosion impacts.
4. That the design of the subdivision is likely to cause substantial environmental damage, or substantially and avoidably injure wildlife and its habitat. As described above (in the EIR findings), the Commission finds that the EIR does not identify enforceable or effective mitigation measures for all of the Project's potentially significant impacts, and

thus, without such mitigation measures, the Project would likely cause substantial environmental damage or injure wildlife.

5. That the design of the subdivision is likely to cause serious public health problems. As members of the public have commented, the Project will create significant noise impacts during construction and could have significant air quality impacts on neighboring communities and schools. Again, a reduced density alternative designed to fit on the contours of the site could require less grading and thus reduce these public health impacts.

Regarding the Grading Permit, Find:

6. That this project, even as conditioned, will have a significant adverse effect on the environment. As described above, the Commission has reviewed the EIR for the Project and considered comments by the public and Applicant. The EIR does not contain adequate, concrete, and enforceable mitigation measures for all of the Project's potentially significant impacts. As a result, it will have a significant, adverse effect on the environment. For example, the EIR concludes that the Project could have significant impacts related to erosion and sedimentation. DEIR at 4.4-12. Mitigation Measure 4.4-1b defers analysis of feasibility of measures to control surface runoff and prevent pollution of site runoff due to erosion and sedimentation. DEIR at 4.4-13. The EIR also concludes there could be significant impacts to surface and groundwater quality from project-related increased stormwater. DEIR at 4.6-11. While Mitigation Measures 4.6-1 includes a list of potential BMPs that could be applied to reduce these impacts, the measure does not require any specific BMPs to be included, much less demonstrate their sufficiency.
7. That this project, as conditioned, fails to conform to the criteria of the San Mateo County Grading Ordinance and is inconsistent with the General Plan for the reasons stated above in Finding Number 2.

**James Castaneda - Ascension Hills Project Additional Comments for Planning Commission**

---

**From:** John Mathon <  
**To:** James Castaneda <jcastaneda@smcgov.org>  
**Date:** 4/1/2015 10:00  
**Subject:** Ascension Hills Project Additional Comments for Planning Commission

---

Dear James, can you make sure that this is distributed and acknowledge back to me it will be distributed.

Dear San Mateo County Planning commission and staff,

RE: Ascension Hill project

I have reviewed the plans regarding the house construction and come to the inescapable conclusion that the applicant has seriously underestimated the amount of soil that has to be removed from the site.

9 of the houses are on pitched lots in excess of 30% slope. Considering the size of the lots and the possible configuration of houses I come to the inescapable conclusion that each of these houses will require substantial soil removal to be built. My calculations show that it is quite likely that each of these houses would require about 400-800 cubic yards of soil removed from the site to support these houses.

This amounts to somewhere near 7000 cubic yards of soil total and is a significant increase in total soil removed from the site. As a result all the traffic estimates, pollution, noise and air, duration of impact of the most intense construction are in error by possibly as high as 25%.

I am also not clear if the other landing pads for the other 10 houses need grading that is not specified or counted in the proposal. It doesn't seem reasonable that the project could be approved without considering ALL that would be necessarily impacted by the project not just the road. This includes any additional retaining walls that might have to be built to support those houses.

Even if the builder does not want to specify the exact houses to be built on each lot it seems to me conditions have to be placed so that the overall project does not exceed the EIR conclusions which means upper bounds need to be placed on design factors around the houses regarding excavation, retaining walls, other impervious decks, driveways or secondary structures that could impact the conclusions of the EIR.

I think you see that omitting the additional soil removal for the houses themselves substantially invalidates all the conclusions of the EIR or requires a complete reassessment of all impacts. How could any other conclusion be possible?

*Re: Public Records Act Request for Ascension Heights Subdivision Project*

Dear Ms. King:

We are in receipt of your letter dated March 24, 2015 and understand it to be a request for records under the California Public Records Act. I am the designee of the head of the agency (in this case, the Department of Planning & Building) for purposes of your request. By this written notice, I am hereby extending the time limit prescribed in Cal. Gov't Code § 6253. The reason for the extension is the need to search for, collect, and appropriately examine a voluminous amount of separate and distinct records that are demanded in a single request. *See* Cal. Gov't Code § 6253(c)(2). A determination is expected to be dispatched on or before April 17, 2015.

Very truly yours,

JOHN C. BEIERS, COUNTY COUNSEL

**James Castaneda - Re: Biologist Survey**

---

**From:** Dennis Thomas <  
**To:** James Castaneda <[jcastaneda@smcgov.org](mailto:jcastaneda@smcgov.org)>  
**Date:** 4/7/2015 08:12  
**Subject:** Re: Biologist Survey

---

James,

OK, thank you very much.

Jim Toby has completed a neighborhood parcel survey that defines the number of units per acre of the surrounding lots. They run from 5 to over 7 units to the acre. Doing the math on my piece, we are .70 units to the acre. Obviously density is not a valid reason to deny this project. I will create a power point presentation which illustrates this.

I have hired a landscape architect which will create a 3D image of the site and I have secured an artist that will paint some water color imagery. These two images will help show that the road does follow the contours of the land and it will demonstrate the impact of tree screening to protect each other's property from visual impacts. Examples of houses will also be included to illustrate the lack of large, looming houses in the development.

I have run some financial calculations of the impact on the schools even though this should not be considered as per State regulation. I will present that information as well.

I believe my next presentation will address all the concerns brought up at the last meeting. I am very interested in learning the findings of the Planning Dept. for the negative vote theory. I would like to have that information as soon as possible.

I would also like to have my attorney discuss the issues with the County Counsel in advance to the meeting. Fortunately, your department reminded the Planning Commission that I needed an opportunity to speak. I want to be certain the proper rules of order are followed and all legal aspects of the project are adhered to in the meeting.

Thank you very much for your continued effort on the project.

James,

We are working on the plans and have most of it ready just trying to tie up a few loose ends.

One of those loose ends is that I never received a new proposal for the Butterfly Condition. You had presented one at the 2/25/15 meeting I offered one back but then I never got an approval or a modified version back. Do you have a new proposal?

James,

If you want to use this fact in your recommendation, the Emerald Estates Subdivision which was approved and built had 8,800 cubic yards of off haul for 7 houses or 1,257 yds per house. Based on Ascension 19 lots we would have 23,883 cubic yards to be at parity. We are at 26,510 which is right in there with the Emerald Estates off haul.

**Date:** 5/18/2015 11:21  
**Subject:** Re: School Impact  
**Attachments:** School Tax Calculation.xlsx

---

James,

A couple Planning Commission members asked about the impact on the schools. The current valuation of the property is around \$1,000,000 dollars and the County gets about \$10,000 in tax revenue from it. This spreadsheet shows the massive revenue impact to the County and the school system when the project eventually sells out - at today's dollars of over \$444,000. \$358,000 of that will be reoccurring income year after year from the annual property tax collected. Quite a substantial amount of money. I am sure it will be even better than this when the project is completed.

I have been told by a County School official that the number of children that will be in these homes will be minimal because they are usually occupied by buyers that are empty nesters. Their children have already gone off to college or are done with college. The impact on the schools is significantly beneficial.

**Attachments:** 2010135LotDensity(11-22-10topo) 2.xlsx; 2010135NeighboringDensityCalcs-NS3-10-15.xlsx; 2010135NeighboringDensityExhibit-NS3-10-15.pdf

---

James and Lisa,

The issue of density was raised at the Planning Commission meeting stating that the project was "too dense". I had Lea and Braze do a study of the nearby lots to the subdivision and we compare the nearby properties with the density of Ascension Heights.

The nearby properties have a lot density between 4.16 and 4.71 units to the acre. I have attached a table that shows the calculations performed by Lea and Braze. The lot density for Ascension Heights is 1.64 units to the acre and I have attached another table that shows the calculations for that. Clearly, the project is not "too dense" in fact it is substantially less dense than the nearby properties. On average it is only about 36% as dense as the nearby properties.

## James Castaneda - Slope Analysis

---

**From:** <  
**To:** <jcastaneda@co.sanmateo.ca.us>, <laozasa@smcgov.org>  
**Date:** 5/19/2015 13:43  
**Subject:** Slope Analysis

---

James and Lisa,

Forgive me if I have already discussed this with you but I could not find an email where I brought some numbers forward on the slope of the lots relative to the surrounding neighborhood slopes.

The average slope of the Ascension Heights lots are 34.93%. and the range for them is between 12-48%. The range for the nearby properties goes from 1% to 64% with varying degrees in between. None of the Ascension lots come close to the max slope of the nearby lots of 64%.

There is no San Mateo County ordinance that requires lots to be less than a certain slope to be buildable. All lots are considered buildable relative to their slope no matter how steep. The surrounding lots are strong evidence of this practice in effect with lots as steep as 64%.

The subdivision has been designed by Lea and Braze Engineering to conform to all existing codes and ordinances in effect. These lots are right in the middle range of the neighboring properties and are actually superior in their design. Specifically, the soil or lack of it for these lots makes them better than the neighboring properties as it is hard bedrock. They can withstand steeper grades than the other existing lots because they are solid rock. This makes them more desirable and safer to build on than neighboring lots.

I hope this information is useful for you. The sources of this information is Lea and Braze Engineering and Michelucci and Associates.

---

James and Lisa,

Jim Toby is still working on some road issues and he has indicated he will be able to get me them this week.

I will have some renderings of the subdivision but the artist has said he can't get them to me until June 3rd. You don't have to do anything with those, they are really just for display.

My attorney will have some remarks for the HOA letters and I will ask him to work on those as well.

When will I get the information on the Findings for Denial? And of course, let's not forget the Butterfly Condition.

**Attachments:** 2010135LotDensity(11-22-10topo) 2.xlsx; 2010135NeighboringDensityCalcs-NS3-10-15.xlsx; 2010135NeighboringDensityExhibit-NS3-10-15.pdf

---

James and Lisa,

The issue of density was raised at the Planning Commission meeting stating that the project was "too dense". I had Lea and Braze do a study of the nearby lots to the subdivision and we compare the nearby properties with the density of Ascension Heights.

The nearby properties have a lot density between 4.16 and 4.71 units to the acre. I have attached a table that shows the calculations performed by Lea and Braze. The lot density for Ascension Heights is 1.64 units to the acre and I have attached another table that shows the calculations for that. Clearly, the project is not "too dense" in fact it is substantially less dense than the nearby properties. On average it is only about 36% as dense as the nearby properties.

## James Castaneda - Slope Analysis

---

**From:** <  
**To:** <jcastaneda@co.sanmateo.ca.us>, <laozasa@smcgov.org>  
**Date:** 5/19/2015 13:43  
**Subject:** Slope Analysis

---

James and Lisa,

Forgive me if I have already discussed this with you but I could not find an email where I brought some numbers forward on the slope of the lots relative to the surrounding neighborhood slopes.

The average slope of the Ascension Heights lots are 34.93%. and the range for them is between 12-48%. The range for the nearby properties goes from 1% to 64% with varying degrees in between. None of the Ascension lots come close to the max slope of the nearby lots of 64%.

There is no San Mateo County ordinance that requires lots to be less than a certain slope to be buildable. All lots are considered buildable relative to their slope no matter how steep. The surrounding lots are strong evidence of this practice in effect with lots as steep as 64%.

The subdivision has been designed by Lea and Braze Engineering to conform to all existing codes and ordinances in effect. These lots are right in the middle range of the neighboring properties and are actually superior in their design. Specifically, the soil or lack of it for these lots makes them better than the neighboring properties as it is hard bedrock. They can withstand steeper grades than the other existing lots because they are solid rock. This makes them more desirable and safer to build on than neighboring lots.

I hope this information is useful for you. The sources of this information is Lea and Braze Engineering and Michelucci and Associates.

## James Castaneda - Timeline

---

**From:** <  
**To:** <jcastaneda@co.sanmateo.ca.us>, <laozasa@smcgov.org>  
**Date:** 5/19/2015 15:09  
**Subject:** Timeline

---

James and Lisa,

Jim Toby is still working on some road issues and he has indicated he will be able to get me them this week.

I will have some renderings of the subdivision but the artist has said he can't get them to me until June 3rd. You don't have to do anything with those, they are really just for display.

My attorney will have some remarks for the HOA letters and I will ask him to work on those as well.

When will I get the information on the Findings for Denial? And of course, let's not forget the Butterfly Condition.

**C. BIORETENTION AREAS**

**MAINTENANCE AGREEMENT**  
 UPON ACCEPTANCE OF THE DESIGN CONCEPT, A MAINTENANCE AGREEMENT WILL BE DEVELOPED REQUIRING THE PROPERTY MANAGER/OWNER TO PROVIDE THE FOLLOWING INFORMATION ON A ROUTINE BASIS. THESE REQUIREMENTS APPLY ONLY TO THE PORTION OF THE BIORETENTION AREAS USED FOR STORM WATER TREATMENT.

**MAINTENANCE STANDARDS:**

- \*SOILS AND PLANTINGS MUST BE MAINTAINED, INCLUDING ROUTINE PRUNING, MOWING, IRRIGATION, REPLACEMENT OF MULCH, WEEDING, AND FERTILIZING WITH A SLOW-RELEASE FERTILIZER WITH TRACE ELEMENTS.
- \*REMOVE OBSTRUCTIONS AND TRASH FROM BIORETENTION AREAS.
- \*ONLY PESTICIDES AND FERTILIZERS THAT ARE ACCEPTED WITHIN THE INTEGRATED PEST MANAGEMENT APPROACH FOR USE IN BIORETENTION AREAS SHALL BE USED.
- \*EROSION AT INFLOW POINTS MUST BE REPAIRED.

**BIORETENTION AREAS SHALL BE INSPECTED AND MAINTAINED MONTHLY TO REVIEW:**

- \*OBSTRUCTION AND TRASH
  - \*IF PONDED WATER IS OBSERVED, THE SURFACE SOILS SHALL BE REMOVED AND REPLACED AND SUBDRAIN SYSTEM INSPECTED.
  - \*CONDITION OF GRASSES.
- D. TRAINING PROGRAM**  
 A COPY OF THE STORM WATER MANAGEMENT PLANS (SWMP) WILL BE MADE AVAILABLE TO PERSONNEL IN CHARGE OF FACILITY MAINTENANCE AND WILL BE DISTRIBUTED TO THE SUBCONTRACTOR REPRESENTATIVE ENGAGED IN THE MAINTENANCE OR INSTALLATION OF THE TCM'S.
- MATERIAL PRESENTED IN THE INTEGRATED PEST MANAGEMENT PROGRAM WILL BE MADE AVAILABLE TO PERSONNEL IN CHARGE OF FACILITY MAINTENANCE AND WILL BE DISTRIBUTED TO THE SUBCONTRACTOR REPRESENTATIVE ENGAGED IN THE MAINTENANCE OR INSTALLATION OF THE TCM'S.**
- A COPY OF THE YEARLY INSPECTION REPORTS SHALL BE MANAGED BY THE PROPERTY MANAGER/OWNER.

**DESCRIPTION OF FACILITY ACTIVITY:**

CONSTRUCT A SINGLE FAMILY RESIDENTIAL DEVELOPMENT OF 19 UNITS, PARKING TO ACCOMMODATE THE UNITS, AND EXTEND UTILITIES TO SERVE THE DEVELOPMENT. FRONTAGE IMPROVEMENTS, ROUGH GRADING AND UTILITY STUBS WILL BE INSTALLED FOR THESE IMPROVEMENTS.

**DESCRIPTION OF WATER BODIES:**

THE PROJECT WILL TIE INTO THE CITY'S EXISTING STORM DRAIN SYSTEM.

**IDENTIFICATION OF POTENTIAL POLLUTANTS:**

POSSIBLE POLLUTANTS FOR THIS SITE INCLUDE TRASH, SEDIMENTS, NUTRIENTS, DUST, CONSTRUCTION DEBRIS, AUTOMOBILE DEBRIS, AND PESTICIDES. THE CONSTRUCTION OF THE PROJECT AND THE LONG TERM MAINTENANCE SHOULD NOT ADD ANY OF THE FOLLOWING: COPPER, NICKEL, DIAZINON, MERCURY, CHLORIDANE, DDT, DIELDRIN, AND PCB'S.

**BMP DESCRIPTION:**

THIS PROJECT USES BIO RETENTION AREAS EXCLUSIVELY AS THE TCM. THE TOTAL SITE AREA IS APPROXIMATELY 579,991 SF. THE DEVELOPMENT WILL HAVE 474,803 SF PERVIOUS SURFACE AND 105,188 SF IMPERVIOUS SURFACE. THE SITE IS DIVIDED INTO 23 DRAINAGE MANAGEMENT AREAS (DMA).

**POST CONSTRUCTION TCM MAINTENANCE AND/OR SOURCE CONTROL:**

FUEL, OIL, PETROLEUM PRODUCTS, PESTICIDES, AND OTHER STORM DRAINAGE POLLUTANT SPILLS NEED TO BE CONTAINED. OWNERS SHALL USE ABSORBENT MATERIAL ON SMALL SPILLS RATHER THAN HOSEING SPILLS DOWN. REMOVE THE ABSORBENT MATERIAL PROMPTLY AND DISPOSE OF PROPERLY, AS REQUIRED BY CITY, STATE AND FEDERAL REGULATIONS.

DRAINAGE INLETS SHALL BE INSPECTED MONTHLY AND KEPT CLEAN OF ANY TRASH THAT MAY HAVE ACCUMULATED. IT IS THE RESPONSIBILITY OF THE PROPERTY MANAGER/OWNER TO HAVE THOSE INSPECTION PERFORMED, DOCUMENTED AND ANY REPAIRS MADE.

**A. LANDSCAPE MAINTENANCE**

LANDSCAPE AREAS SHALL BE COVERED WITH PLANTS OR SOME TYPE OF GROUND COVER TO MINIMIZE EROSION. NO AREAS ARE TO BE LEFT AS BARE DIRT THAT COULD ERODE. MOUNDING SLOPES SHALL NOT EXCEED 2 HORIZONTAL TO 1 VERTICAL.

PESTICIDES AND FERTILIZERS SHALL BE STORED AS HAZARDOUS MATERIALS AND IN APPROPRIATE PACKAGING. OVER SPRAYING ONTO PAVED AREAS SHALL BE AVOIDED WHEN APPLYING FERTILIZERS AND PESTICIDES. PESTICIDES AND FERTILIZERS WILL BE PROHIBITED FROM STORAGE OUTSIDE.

THE LANDSCAPE AREAS SHALL BE INSPECTED AND ALL TRASH PICKED UP AND OBSTRUCTIONS TO THE DRAINAGE FLOW REMOVED ON A MONTHLY BASIS MINIMUM. THIS SITE WILL BE DESIGNED WITH EFFICIENT IRRIGATION AND DRAINAGE TO REDUCE PESTICIDE USE. PLANTS HAVE BEEN SELECTED BASED ON SIZE AND ARE SITUATED TO REDUCE MAINTENANCE AND ROUTINE PRUNING.

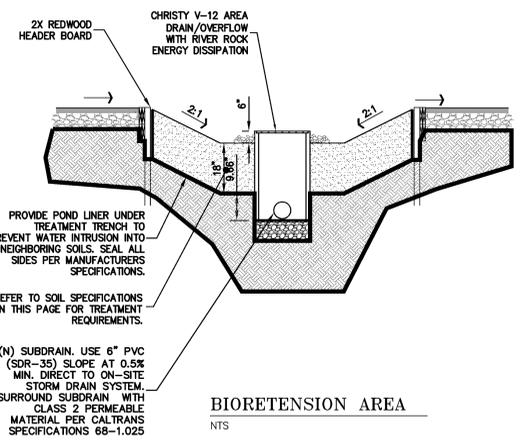

THE INTEGRATED PEST MANAGEMENT INFORMATION ATTACHED WILL BE PROVIDED TO BUILDING MANAGEMENT.

**B. DRAINAGE COLLECTION MANAGEMENT**

THE STORM DRAINAGE SYSTEM CONSISTS OF AREA DRAINS, CATCH BASINS, VEGETATED SWALES, CURB INLETS, AND CLEANOUTS.

THE STORM DRAINAGE COLLECTION SYSTEM SHALL BE CLEANED YEARLY BY THE PROPERTY MANAGEMENT/OWNER. THE INSPECTION SHALL BE PERFORMED DURING THE DRY SEASON. THIS INCLUDES THE FOLLOWING:

\*ALL TRASH AND OBSTRUCTIONS SHALL BE REMOVED FROM AREA DRAINS, CLEANOUTS, AND CATCH BASINS.

AREA DESCRIPTION (DMA)	TREATMENT CONTROL MEASURE	IMPERVIOUS AREA (sf)	IMPERVIOUS AREA WITH 25% SAFETY FACTOR	BMP SIZING	REQUIRED TREATMENT (sf)	PROPOSED TREATMENT (sf)

---

Hi David,

Mr. Thomas has requested additional time to finalize his proposed modifications to the project, so we're now looking at the August 12 PC meeting. Although we have not yet formulated our recommendation, I can tell you that we will not be supportive of a request by the applicant for further delay.

I'll keep you posted as things progress. Let me know if you have questions or concerns in the mean time.

Thanks,  
Steve

>>> David Burruto 6/1/2015 1:05 PM >>>  
Steve,

are we still on target for July at the Planning Commission and if so what will be the presentation? I know Planning provided time for responses to the issues raised. Have additional modification been made or new comments submitted? Please provide a sketch of this so I can relay back to the Supervisor. Thanks.

DB

***RE: Results of 2015 Rare Plant Surveys and Update on Mission Blue / Pardalis Blue Butterfly Habitat and Nesting Raptor Surveys on the Ascension Heights Subdivision Project Site in San Mateo County, California.***

Dear Mr. Thomas,

Per your request, we conducted rare plant surveys, nesting raptor surveys and assessed Mission blue /Pardalis blue butterfly habitat on the proposed Ascension Heights Subdivision Project in San Mateo County, California. The results are provided herein.

## **2015 RARE PLANT SURVEYS**

These surveys were timed to coincide with the periods when these plants would be the most visible and detectable by botanical surveyors. The approximately 13.3 acre project site is located within the unincorporated community of San Mateo Highlands at the northeast corner of Bel Aire Road and Ascension Drive. The project site is largely undeveloped except for a paved road that runs from the north corner at Bel Aire Drive to near the south eastern edge of the site. The paved road provides access to a water tank and a cellular transmitter tower that are surrounded by, but not a part of the project site. Single family residential neighborhoods are the primary land use bounding the project site. Elevations on the site range from approximately 450 feet at the southern corner of the project site to approximately 620 feet at the water tank.

The *Final Environmental Impact Report San Mateo County Ascension Heights Subdivision Project Volume II – Revised Draft EIR* (2014) identified a list of eleven special-status plant species with the potential to occur on the Ascension Heights Subdivision Project site. Four of the species identified - Indian Valley bush-mallow (*Malacothamnus aboriginum*), Arcuate bush mallow (*M. arcuatus*), Davidson's bush-mallow (*M. davidsonii*) and San Francisco campion (*Silene verecunda ssp. verecunda*) - were eliminated from the potential to occur list based on a botanical survey conducted on the site on July 25, 2013 by Analytical Environmental Services. Because the 2013 survey was conducted outside of the time period when the remaining seven species would be evident and identifiable, additional focused botanical surveys were recommended in order to determine potential project impacts to these species. The seven plant species recommended for additional surveys include bent-flowered fiddleneck (*Amsinckia lunaris*), San Francisco collinsia (*Collinsia multicolor*), western leatherwood (*Dirca occidentalis*), San Mateo woolly sunflower (*Eriophyllum latilobum*), fragrant frillary

(*Fritillaria liliacea*), Dudley's lousewort (*Pedicularis dudleyi*) and white-rayed pentachaeta (*Pentachaeta bellidiflora*).

### ***SURVEY METHODS***

Botanical surveys were conducted by botanist Neal Kramer of Kramer Botanical and Patrick Kobernus of Coast Ridge Ecology in spring 2015. Neal Kramer has over 20 years experience conducted botanical and rare plant surveys in the San Francisco Bay Area, and Patrick Kobernus has over 20 years experience conducting rare plant and wildlife surveys within the San Francisco Bay Area. Both Mr. Kramer and Mr. Kobernus have conducted extensive survey work within San Mateo County.

In early March 2015, reference site visits in the vicinity of the proposed project confirmed that western leatherwood, fragrant fritillary and white-rayed pentacheata were evident and identifiable. As a result, a focused survey for these target species was conducted on the project site on March 3, 2015.

In late March 2015, reference site visits within 2 miles of the project site confirmed that bent-flowered fiddleneck, San Francisco collinsia and San Mateo woolly sunflower were evident and identifiable. Although no reference site for Dudley's lousewort was readily accessible in the project vicinity, the closely related warrior's plume (*Pedicularis densiflora*) with similar phenology was observed in full bloom in late March within 3 miles of the project site. Therefore, a second focused survey was conducted on the project site for these four target species on March 27, 2015.

During the March 3<sup>rd</sup> and March 27<sup>th</sup> surveys, Kramer Botanical botanist Neal Kramer and Coast Ridge Ecology biologist Patrick Kobernus walked the entire project site looking for the target special-status plant species. Walking transects were chosen to ensure 100% visual coverage of the entire project area. Although target species were a special focus, the surveys were floristic in nature and all plant species identifiable during the surveys were recorded in a field notebook. A complete list of plant species observed on the Ascension Heights Subdivision project site is included at the end of this report.

### ***RESULTS***

No rare plants, including western leatherwood, fragrant fritillary, white-rayed pentachaeta, bent-flowered fiddleneck, San Francisco collinsia, San Mateo woolly sunflower or Dudley's lousewort were found on the project site during the two March 2015 rare plant surveys. Based on these results, we conclude that the proposed development project will not adversely impact any of these special-status plant species.

### ***2015 UPDATE ON MISSION BLUE BUTTERFLY HABITAT***

Because the rare plant survey also included a floristic survey of the property to document all plant species encountered, locations of the Mission blue/ Pardalis blue butterfly host plant summer lupine (*Lupinus formosus*) were noted. The patches of this plant species were observed to be consistent with host plant locations observed during the mission blue surveys conducted on the property in 2005, 2008 and 2012 by Coast Ridge Ecology.

During the course of our 2015 rare plant surveys of the property we did not detect any summer lupine within the development envelope of the proposed Ascension Heights subdivision project.

It should be noted that the DEIR for the project misquoted the Mission blue/ Pardalis surveys that were conducted by Coast Ridge Ecology on the project site. The DEIR states (on page 4.3-14) that "**Three** biological surveys for the Mission blue butterfly have occurred on the project site in the spring and summer months of 2005, 2008, and 2012, during which 12 adult butterflies were observed". In actuality, **twenty-four** biological surveys were done over the course of three separate years (2005, 2008 and 2012), including host plant mapping. Within each of these years, multiple surveys were done for Mission blue/ Pardalis blue butterflies on the site, with a total of 24 Mission blue/ Pardalis blue surveys conducted overall. During the course of those surveys, no Mission blue/ Pardalis blue butterflies, or their host plants, were detected within the proposed development envelope of the Ascension Heights project site.

### **2015 NESTING RAPTOR SURVEYS**

The property was walked and surveyed for nesting raptors on March 5, 2015 and April 10, 2015 by biologist Patrick Kobernus. Tree groves on adjacent properties were also searched for any potential raptor nests or nesting activity. The surveys were conducted during the raptor breeding season which is typically from February 15 through August 31. The surveys were conducted from approximately 7:30 AM to 10:00 AM during appropriate weather (clear skies, no wind and air temperatures in the low 50's to upper 60's. The site was walked inspected for any raptor nesting activity (e.g. calling, pair bonding behaviors, nest material carries), as well as any raptor nests. No raptor nests or raptor nesting activity was observed on the property.

Most of the trees on site (mostly *Pinus sp.*) do not provide suitable raptor nesting habitat due to wind exposure and lack of large supportive branches that could support raptor nests. The only raptor activity observed on site was one red-tailed hawk that was observed roosting in the top of a pine tree for approximately 30 minutes during the April 10 survey. During botanical surveys of the site during March and April 2015, a few turkey vultures and red-tailed hawks were observed flying over the site.

The eucalyptus grove on the south side of the property (which is outside the proposed building envelope) provides some potential as nesting habitat for raptors such as red-tailed hawk, red-shouldered hawk and great-horned owl. Within this grove, a few crows were observed within a broken top Eucalyptus tree on the April 10 survey, and they may be building a nest in this location. No raptor activity was observed in this grove of trees.

No special status raptors such as burrowing owls, northern harriers or white tailed kites were observed and it is highly unlikely these species would nest on site due to a lack of suitable nesting habitat.

- Burrowing owls nest on the ground within ground squirrel burrows, or manmade holes/ culverts for nesting. No ground squirrel burrows or suitable habitat to support burrowing owls was observed on site.

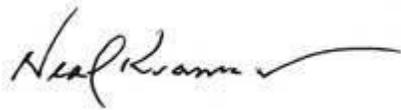

- Northern harriers nest on the ground, mostly within patches of dense, often tall, vegetation in undisturbed areas (MacWhirter and Bildstein 1996). The property is comprised of primarily open grassland and trees, and does not provide the type of dense cover that would support northern harriers.
- White-tailed kites nest within lowland grasslands, agriculture, wetlands, oak-woodland and savannah habitats, and riparian areas associated with open areas. They typically do not nest on steep hillsides, which is the primary topography on the property.

If you have questions regarding this survey report, please don't hesitate to contact us.

Sincerely,

Patrick Kobernus  
Principal and Senior Biologist  
Coast Ridge Ecology

Neal Kramer, M.S.

## Plant Species List for Ascension Heights Subdivision Project Site

The plant species listed below were observed on the project site during surveys conducted by Kramer Botanical botanist Neal Kramer and Coast Ridge Ecology biologist Patrick Kobernus on March 3 and March 27, 2015. Scientific nomenclature follows *The Jepson Manual* (Baldwin 2012).

\* Indicates introduced non-native species.

<u>Scientific Name</u>	<u>Common Name</u>
<b>AGAVACEAE - Agave Family</b>	
<i>Chlorogalum pomeridianum</i>	soap plant, amole
<b>AMARYLLIDACEAE - Amaryllis Family</b>	
<i>Amaryllis belladonna</i> *	naked lady
<i>Narcissus pseudonarcissus</i> *	daffodil
<b>ANACARDIACEAE - Sumac or Cashew Family</b>	
<i>Toxicodendron diversilobum</i>	poison oak
<b>APIACEAE - Carrot Family</b>	
<i>Foeniculum vulgare</i> *	sweet fennel
<i>Sanicula bipinnatifida</i>	purple sanicula, shoe buttons
<i>Sanicula crassicaulis</i>	Pacifica sanicula
<i>Scandix pecten-veneris</i> *	shepherd's needle
<b>ARALIACEAE - Ginseng Family</b>	
<i>Hedera helix</i> *	English ivy
<b>ASTERACEAE - Sunflower Family</b>	
<i>Achillea millefolium</i>	yarrow
<i>Baccharis pilularis</i>	coyote brush
<i>Carduus pycnocephalus</i> *	Italian thistle
<i>Cirsium vulgare</i> *	bull thistle
<i>Crepis vesicaria ssp. taraxacifolia</i> *	Weedy hawksbeard
<i>Erigeron canadensis</i>	horseweed
<i>Erigeron foliosus var. foliosus</i>	leafy fleabane
<i>Gnaphalium californicum</i>	California cudweed
<i>Helminthotheca echioides</i> *	bristly ox-tounge
<i>Heterotheca sessiliflora</i>	golden aster
<i>Hypochaeris glabra</i> *	smooth cat's ear
<i>Hypochaeris radicata</i> *	rough cat's-ear
<i>Logfia gallica</i> *	narrow leaved filago
<i>Pseudognaphalium luteoalbum</i> *	weedy cudweed
<i>Silybum marianum</i> *	milk thistle
<i>Solidago velutina ssp. californica</i>	California goldenrod
<i>Soliva sessilis</i> *	common soliva
<i>Sonchus asper ssp. asper</i> *	prickly sow thistle
<i>Sonchus oleraceus</i> *	common sow thistle
<i>Symphyotrichum chilense</i>	Pacific aster
<i>Taraxacum officinale</i> *	dandelion
<i>Wyethia angustifolia</i>	narrow-leaved mules ears

*Rare Plant Surveys, Butterfly Habitat Update and Raptor Surveys for the Ascension Heights Subdivision Project – April 11, 2015*

**BRASSICACEAE - Mustard Family**

*Cardamine oligosperma* bitter cress  
*Hirschfeldia incana\** summer mustard

**CAPRIFOLIACEAE - Honeysuckle Family**

*Symphoricarpos mollis* creeping snowberry

**CARYOPHYLLACEAE - Pink Family**

*Cerastium glomeratum\** mouse-eared chickweed  
*Silene gallica\** common catchfly, windmill pink

**CELASTRACEAE - Staff-Tree Family**

*Maytenus boaria\** mayten

**CISTACEAE - Rock-Rose Family**

*Cistus incanus\** rock-rose

**CONVOLVULACEAE - Morning-Glory or Bindweed Family**

*Calystegia subacaulis* stemless/hill morning-glory

**CUCURBITACEAE - Gourd Family**

*Marah fabaceus* California man-root

**CUPRESSACEAE - Cypress Family**

*Hesperocyparis macrocraipa\** Monterey cypress  
*Sequoia sempervirens* coast redwood

**CYPERACEAE - Sedge Family**

*Carex spp.* sedge

**DIPSACACEAE - Teasel Family**

*Dipsacus sp.\** teasel

**DRYOPTERIDACEAE - Wood Fern Family**

*Dryopteris arguta* coastal wood fern

**EUPHORBIACEAE - Spurge Family**

*Euphorbia peplus\** petty spurge

**FABACEAE - Legume Family**

*Acacia longifolia\** Sydney golden wattle  
*Acacia dealbata\** silver wattle  
*Acmispon wrangelianus* calf lotus  
*Genista monspessulana\** French broom  
*Lotus corniculatus\** bird's foot trefoil  
*Lupinus bicolor* miniature lupine, Lindley's annual lupine  
*Lupinus formosus var. formosus* summer lupine  
*Lupinus succulentus* arroyo lupine  
*Medicago polymorpha\** burclover  
*Trifolium campestre\** hop clover  
*Trifolium subterraneum\** subterraneum clover  
*Vicia americana var. americana* American vetch  
*Vicia sativa\** common vetch  
*Vicia villosa\** hairy/winter vetch

**FAGACEAE - Oak Family**

*Quercus agrifolia* coast live oak

**GERANIACEAE - Geranium Family**

*Erodium cicutarium\** red-stemmed filaree  
*Erodium botrys\** broad-leaved filaree  
*Geranium dissectum\** cut-leaved geranium

**IRIDACEAE - Iris Family**

*Freesia refracta\** freesia  
*Sisyrinchium bellum* blue-eyed-grass

San Mateo, CA 94402

**Re; Ascension Heights, San Mateo**

Mr. Thomas,

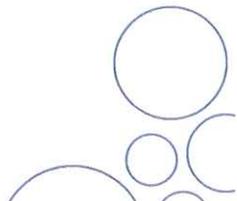

I have taken the opportunity to review the landscape design for Bel Aire Road in San Mateo Highlands, the plants that you have selected fit in our conservation theme, they are drought tolerant. Thank you for considering these types of outdoor plants, it is in times like the current drought that we appreciate the efforts of your development to sustain into the future.

We have also reviewed the water usage for this development and previously provided a "Will Serve" letter; currently we have the water supply allotment for this project entirely.

Again, I want to thank you for considering the environment when selecting the plant palette as you have, we wish more developers would use drought tolerant plants in their design.

Thank you,

Tony Carrasco  
District Manager, Bayshore

Dear James,

I just got your email. Thank you. However, we thought we were supposed to get at least 30 days notice? It will be hard enough to communicate with residents on a shorter schedule, especially when many are on vacation or busy with children starting school in a couple weeks. When we requested the meeting take place after Labor Day, we planned on having the entire notice period to reach residents.

Additionally, we appreciate all the documents that have been posted to the Public Correspondence link. It is clearly a big project. However, the correspondence ends in late May and we are under the impression more was forthcoming. Specifically,

- A biology report
- A revised map of the entrance road and corresponding engineering report
- Landscaping information

Were those items submitted to the Planning Department and when will we have a chance to review?

Is the developer or owner planning to make a presentation? Will it be new information or data we already possess?

Finally, regarding the agenda for the Planning Commission meeting

- Is there a public comment session?
- Will it be limited by time, number of people or topic?
- Will the "reasons for denial" as requested by the Planning Commission be presented? Although not requested, were "reasons for approval" drafted?
- Will the Planning Commission vote that evening and if so, on what exactly? The new information? The total project?

We appreciate your attention to our concerns, and look forward to hearing from you.

Regards,  
 Laurel Nagle

James,

You have most of the Ascension booklet info already so I will send you via email the balance of the docs. This is the Density Study.

Re: Will Serve Letter  
Ascension Heights Subdivision  
San Mateo, CA

Dear Mr. Thomas:

California Water Service Company, Bayshore District ("Cal Water") has determined that water is available to serve the above-referenced project based on the information provided. Cal Water agrees to operate the water system and provide service in accordance with the rules and regulations of the California Public Utilities Commission (CPUC) and the company's approved tariffs on file with the CPUC. This determination of water availability shall remain valid for **two years** from the date of this letter. If construction of the project has not commenced within this **two year** time frame, Cal Water will be under no further obligation to serve the project unless the developer receives an updated letter from Cal Water reconfirming water availability. Additionally, Cal Water reserves the right to rescind this letter at any time in the event its water supply is severely reduced by legislative, regulatory or environmental actions.

Cal Water will provide such potable water at such pressure as may be available from time to time as a result of its normal operations per the company's tariffs on file with the CPUC. Installation of facilities through developer funding shall be made in accordance with the current rules and regulations of the CPUC including, among others, Tariff Rules 15 and 16 and General Order 103-A. In order for us to provide adequate water for domestic use as well as fire service protection, it may be necessary for the developer to fund the cost of special facilities, such as, but not limited to, booster pumps, storage tanks and/or water wells, in addition to the cost of mains and services. Cal Water will provide more specific information regarding special facilities and fees after you provide us with your improvement plans, fire department requirements, and engineering fees for this project.

This letter shall at all times be subject to such changes or modifications by the CPUC as said Commission may, from time to time, require in the exercise of its jurisdiction.

If you have any questions regarding the above, please call me at (650) 558-7862.

Sincerely,

Leighton Low  
Superintendent II  
California Water Service

Hi Laurel --

James is out today, but we have been discussing the hearing date for the project internally, with the concerns you expressed in your e-mail in mind. The schedule has changed as follows:

October 14 -- Planning Commission Hearing Date

August 19 (approximate) -- Release of additional correspondence and additional materials submitted by the applicant.

August 26 (approximate) -- Release of the revised Final EIR which makes minor revisions reflecting additional materials and comments received.

September 2 (approximate) -- Release of Staff Report Addendum to include what the Planning Commission requested (draft findings for denial) and packaging additional materials provided by the applicant for the Planning Commission's consideration.

With regard to the Planning Commission meeting itself, the details of how the meeting will be run are at the Commission's discretion, but since there is new information to consider, I believe that Staff's recommendation will be to allow for additional public comment.

Please let me or James know if you have any other questions or concerns at this point. Have a great weekend!

Dear James,

I know this is Friday afternoon, but wondered if there was a response to my email from Tuesday, August 11th?

We are taking the silence as a sign that the Ascension Heights may be pushed out to September 23rd???

Thanks for assisting us with this.

Laurel Nagle

Dear James,

I just got your email. Thank you. However, we thought we were supposed to get at least 30 days notice? It will be hard enough to communicate with residents on a shorter schedule, especially when many are on vacation or busy with children starting school in a couple weeks. When we requested the meeting take place after Labor Day, we planned on having the entire notice period to reach residents.

Additionally, we appreciate all the documents that have been posted to the Public Correspondence link. It is clearly a big project. However, the correspondence ends in late May and we are under the impression more was forthcoming. Specifically,

- A biology report
- A revised map of the entrance road and corresponding engineering report
- Landscaping information

Were those items submitted to the Planning Department and when will we have a chance to review?

Is the developer or owner planning to make a presentation? Will it be new information or data we already possess?

Finally, regarding the agenda for the Planning Commission meeting

- Is there a public comment session?
- Will it be limited by time, number of people or topic?
- Will the "reasons for denial" as requested by the Planning Commission be presented? Although not requested, were "reasons for approval" drafted?
- Will the Planning Commission vote that evening and if so, on what exactly? The new information? The total project?

We appreciate your attention to our concerns, and look forward to hearing from you.

Regards,  
Laurel Nagle

Hi James,

We understand there may be consideration of including the Ascension Heights project the second August Planning Commission meeting. For reasons of both a short notice and a critical meeting occurring in August when many people will be on vacation, we respectfully request the Ascension Hts hearing not be scheduled before Labor Day.

Thank you,

Laurel Nagle/Jerry Ozanne,

Hi Laurel --

The Planning Commission meeting on October 14 is their regular meeting day, and the meeting will be at their regular time and place, at 9:00 a.m. in the Board of Supervisors Chambers. At this point, we don't know what other items will also be on that agenda, but if you need a time certain to start planning for now, I would go with 9:00 a.m.

Best,

>>> Laurel Nagle <[laurel@smcgov.org](mailto:laurel@smcgov.org)> > 8/15/2015 2:02 PM >>>  
 Dear Lisa,

Thank you for the quick response. We appreciate the detailed timeline for getting information. The neighborhood is also grateful for the change of the date.

Should we go ahead and contact Janneth regarding the meeting specifics - time, location, etc.?

Sincerely,

Laurel Nagle

**AGREEMENT BETWEEN THE COUNTY OF SAN MATEO AND  
ANALYTICAL ENVIRONMENTAL SERVICES**

THIS AGREEMENT, entered into this 15th day of April, 2013, by and between the COUNTY OF SAN MATEO, hereinafter called "County," and Analytical Environmental Services, hereinafter called "Contractor."

W I T N E S S E T H:

WHEREAS, pursuant to Government Code, Section 31000, County may contract with independent contractors for the furnishing of such services to or for County or any Department thereof;

WHEREAS, it is necessary and desirable that Contractor be retained for the purpose of preparing an Environmental Impact Report for the proposed Ascensions Heights subdivision project (County File number PLN2002-00517) to be re-circulated.

**NOW, THEREFORE, IT IS HEREBY AGREED BY THE PARTIES HERETO AS FOLLOWS:**

**1. Exhibits and Attachments**

The following exhibits and attachments are included hereto and incorporated by reference herein:

- Exhibit A—Services
- Exhibit B—Payments and rates
- Exhibit C—Scope of Work

**2. Services to be performed by Contractor**

In consideration of the payments set forth herein and in Exhibit "B," Contractor shall perform services for County in accordance with the terms, conditions and specifications set forth herein and in Exhibit "A."

**3. Payments**

In consideration of the services provided by Contractor in accordance with all terms, conditions and specifications set forth herein and in Exhibit "A," County shall make payment to Contractor based on the rates and in the manner specified in Exhibit "B." The County reserves the right to withhold payment if the County determines that the quantity or quality of the work performed is unacceptable. In no event shall the County's total fiscal obligation under this Agreement exceed One Hundred Thirteen Thousand Seventy-Five Dollars, \$113,075.

**4. Term and Termination**

Subject to compliance with all terms and conditions, the term of this Agreement shall be from April 15, 2013 through April 15, 2014.

This Agreement may be terminated by Contractor, the Director of Community Development or his/her designee at any time without a requirement of good cause upon thirty (30) days' written notice to the other party.

In the event of termination, all finished or unfinished documents, data, studies, maps, photographs, reports, and materials (hereafter referred to as materials) prepared by Contractor under this Agreement shall become the property of the County and shall be promptly delivered to the County. Upon termination, the Contractor may make and retain a copy of such materials. Subject to availability of funding, Contractor shall be entitled to receive payment for work/services provided prior to termination of the Agreement. Such payment shall be that portion of the full payment which is determined by comparing the work/services completed to the work/services required by the Agreement.

**5. Availability of Funds**

The County may terminate this Agreement or a portion of the services referenced in the Attachments and Exhibits based upon unavailability of Federal, State, or County funds, by providing written notice to Contractor as soon as is reasonably possible after the County learns of said unavailability of outside funding.

**6. Relationship of Parties**

Contractor agrees and understands that the work/services performed under this Agreement are performed as an independent Contractor and not as an employee of the County and that Contractor acquires none of the rights, privileges, powers, or advantages of County employees.

**7. Hold Harmless**

Contractor shall indemnify and save harmless County, its officers, agents, employees, and servants from all claims, suits, or actions of every name, kind, and description, brought for, or on account of: (A) injuries to or death of any person, including Contractor, or (B) damage to any property of any kind whatsoever and to whomsoever belonging, (C) any sanctions, penalties, or claims of damages resulting from Contractor's failure to comply with the requirements set forth in the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and all Federal regulations promulgated thereunder, as amended, or (D) any other loss or cost, including but not limited to that caused by the concurrent active or passive negligence of County, its officers, agents, employees, or servants, resulting from the performance of any work required of Contractor or payments made pursuant to this Agreement, provided that this shall not apply to injuries or damage for which County has been found in a court of competent jurisdiction to be solely liable by reason of its own negligence or willful misconduct.

The duty of Contractor to indemnify and save harmless as set forth herein, shall include the duty to defend as set forth in Section 2778 of the California Civil Code.

**8. Assignability and Subcontracting**

Contractor shall not assign this Agreement or any portion thereof to a third party or subcontract with a third party to provide services required by contractor under this Agreement without the prior written consent of County. Any such assignment or subcontract without the County’s prior written consent shall give County the right to automatically and immediately terminate this Agreement.

**9. Insurance**

The Contractor shall not commence work or be required to commence work under this Agreement unless and until all insurance required under this paragraph has been obtained and such insurance has been approved by Risk Management, and Contractor shall use diligence to obtain such insurance and to obtain such approval. The Contractor shall furnish the County with certificates of insurance evidencing the required coverage, and there shall be a specific contractual liability endorsement extending the Contractor's coverage to include the contractual liability assumed by the Contractor pursuant to this Agreement. These certificates shall specify or be endorsed to provide that thirty (30) days' notice must be given, in writing, to the County of any pending change in the limits of liability or of any cancellation or modification of the policy.

(1) **Worker's Compensation and Employer's Liability Insurance** The Contractor shall have in effect during the entire life of this Agreement Workers' Compensation and Employer's Liability Insurance providing full statutory coverage. In signing this Agreement, the Contractor certifies, as required by Section 1861 of the California Labor Code, that it is aware of the provisions of Section 3700 of the California Labor Code which requires every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of the Code, and will comply with such provisions before commencing the performance of the work of this Agreement.

(2) **Liability Insurance** The Contractor shall take out and maintain during the life of this Agreement such Bodily Injury Liability and Property Damage Liability Insurance as shall protect him/her while performing work covered by this Agreement from any and all claims for damages for bodily injury, including accidental death, as well as any and all claims for property damage which may arise from contractors operations under this Agreement, whether such operations be by himself/herself or by any sub-contractor or by anyone directly or indirectly employed by either of them. Such insurance shall be combined single limit bodily injury and property damage for each occurrence and shall be not less than the amount specified below.

Such insurance shall include:

- (a) Comprehensive General Liability . . . . . \$1,000,000
- (b) Motor Vehicle Liability Insurance . . . . . \$1,000,000
- (c) Professional Liability . . . . . \$1,000,000

County and its officers, agents, employees and servants shall be named as additional insured on any such policies of insurance, which shall also contain a provision that the insurance afforded thereby to the County, its officers, agents, employees and servants shall be primary insurance to the full limits of liability of the policy, and that if the County or its officers and employees have other insurance against the loss covered by such a policy, such other insurance shall be excess insurance only.

In the event of the breach of any provision of this section, or in the event any notice is received which indicates any required insurance coverage will be diminished or canceled, the County of San Mateo at its option, may, notwithstanding any other provision of this Agreement to the contrary, immediately declare a material breach of this Agreement and suspend all further work pursuant to this Agreement.

**10. Compliance with laws; payment of Permits/Licenses**

All services to be performed by Contractor pursuant to this Agreement shall be performed in accordance with all applicable Federal, State, County, and municipal laws, ordinances and regulations, including, but not limited to, the Health Insurance Portability and Accountability Act of 1996 (HIPAA), and the Federal Regulations promulgated thereunder, as amended, and will comply with the Business Associate requirements set forth in Attachment "H," and the Americans with Disabilities Act of 1990, as amended, and Section 504 of the Rehabilitation Act of 1973, as amended and attached hereto and incorporated by reference herein as Attachment "I," which prohibits discrimination on the basis of handicap in programs and activities receiving any Federal or County financial assistance. Such services shall also be performed in accordance with all applicable ordinances and regulations, including, but not limited to, appropriate licensure, certification regulations, provisions pertaining to confidentiality of records, and applicable quality assurance regulations. In the event of a conflict between the terms of this Agreement and State, Federal, County, or municipal law or regulations, the requirements of the applicable law will take precedence over the requirements set forth in this Agreement. Further, Contractor certifies that the Contractor and all of its subcontractors will adhere to all applicable provisions of Chapter 4.106 of the San Mateo County Ordinance Code, which regulates the use of disposable food service ware.

Contractor will timely and accurately complete, sign, and submit all necessary documentation of compliance.

**11. Non-Discrimination and Other Requirements**

- A. *Section 504 applies only to Contractors who are providing services to members of the public.* Contractor shall comply with § 504 of the Rehabilitation Act of 1973, which provides that no otherwise qualified handicapped individual shall, solely by reason of a disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination in the performance of this Agreement.
- B. *General non-discrimination.* No person shall, on the grounds of race, color, religion, ancestry, gender, age (over 40), national origin, medical condition (cancer), physical or mental disability, sexual orientation, pregnancy, childbirth or related medical condition, marital status, or political affiliation be denied any benefits or subject to discrimination under this Agreement.

- C. *Equal employment opportunity.* Contractor shall ensure equal employment opportunity based on objective standards of recruitment, classification, selection, promotion, compensation, performance evaluation, and management relations for all employees under this Agreement. Contractor's equal employment policies shall be made available to County of San Mateo upon request.
- D. *Violation of Non-discrimination provisions.* Violation of the non-discrimination provisions of this Agreement shall be considered a breach of this Agreement and subject the Contractor to penalties, to be determined by the County Manager, including but not limited to
  - i) termination of this Agreement;
  - ii) disqualification of the Contractor from bidding on or being awarded a County contract for a period of up to 3 years;
  - iii) liquidated damages of \$2,500 per violation;
  - iv) imposition of other appropriate contractual and civil remedies and sanctions, as determined by the County Manager.

To effectuate the provisions of this section, the County Manager shall have the authority to examine Contractor's employment records with respect to compliance with this paragraph and/or to set off all or any portion of the amount described in this paragraph against amounts due to Contractor under the Contract or any other Contract between Contractor and County.

Contractor shall report to the County Manager the filing by any person in any court of any complaint of discrimination or the filing by any person of any and all charges with the Equal Employment Opportunity Commission, the Fair Employment and Housing Commission or any other entity charged with the investigation of allegations within 30 days of such filing, provided that within such 30 days such entity has not notified Contractor that such charges are dismissed or otherwise unfounded. Such notification shall include the name of the complainant, a copy of such complaint, and a description of the circumstance. Contractor shall provide County with a copy of their response to the Complaint when filed.

- E. *Compliance with Equal Benefits Ordinance.* With respect to the provision of employee benefits, Contractor shall comply with the County Ordinance which prohibits contractors from discriminating in the provision of employee benefits between an employee with a domestic partner and an employee with a spouse.
- F. The Contractor shall comply fully with the non-discrimination requirements required by 41 CFR 60-741.5(a), which is incorporated herein as if fully set forth.

## **12. Compliance with Contractor Employee Jury Service Ordinance**

Contractor shall comply with the County Ordinance with respect to provision of jury duty pay to employees and have and adhere to a written policy that provides that its employees shall receive from the Contractor, on an annual basis, no less than five days of regular pay for actual jury service in San Mateo County. The policy may provide that employees deposit any fees received for such jury service with the Contractor or that the Contractor deduct from the employees' regular pay the fees received for jury service.

**13. Retention of Records, Right to Monitor and Audit**

(a) CONTRACTOR shall maintain all required records for three (3) years after the COUNTY makes final payment and all other pending matters are closed, and shall be subject to the examination and/or audit of the County, a Federal grantor agency, and the State of California.

(b) Reporting and Record Keeping: CONTRACTOR shall comply with all program and fiscal reporting requirements set forth by appropriate Federal, State and local agencies, and as required by the COUNTY.

(c) CONTRACTOR agrees to provide to COUNTY, to any Federal or State department having monitoring or review authority, to COUNTY's authorized representatives, and/or their appropriate audit agencies upon reasonable notice, access to and the right to examine all records and documents necessary to determine compliance with relevant Federal, State, and local statutes, rules and regulations, and this Agreement, and to evaluate the quality, appropriateness and timeliness of services performed.

**14. Merger Clause**

This Agreement, including the Exhibits attached hereto and incorporated herein by reference, constitutes the sole Agreement of the parties hereto and correctly states the rights, duties, and obligations of each party as of this document's date. In the event that any term, condition, provision, requirement or specification set forth in this body of the agreement conflicts with or is inconsistent with any term, condition, provision, requirement or specification in any exhibit and/or attachment to this agreement, the provisions of this body of the agreement shall prevail. Any prior agreement, promises, negotiations, or representations between the parties not expressly stated in this document are not binding. All subsequent modifications shall be in writing and signed by the parties.

**15. Controlling Law and Venue**

The validity of this Agreement and of its terms or provisions, as well as the rights and duties of the parties hereunder, the interpretation, and performance of this Agreement shall be governed by the laws of the State of California. Any dispute arising out of this Agreement shall be venued either in the San Mateo County Superior Court or in the United States District Court for the Northern District of California.

**16. Notices**

Any notice, request, demand, or other communication required or permitted hereunder shall be deemed to be properly given when both (1) transmitted via facsimile to the telephone number listed below and (2) either deposited in the United State mail, postage prepaid, or when deposited for overnight delivery with an established overnight courier that provides a tracking number showing confirmation of receipt, for transmittal, charges prepaid, addressed to:

**In the case of County, to:**  
Director of Community Development  
Planning & Building Department  
455 County Center, Mail Drop PLN122  
Redwood City, CA 94063

**In the case of Contractor, to:**  
Analytical Environmental Services  
1801 7<sup>th</sup> Street, Ste 100  
Sacramento, CA 95811

In the event that the facsimile transmission is not possible, notice shall be given both by United States mail and an overnight courier as outlined above.

IN WITNESS WHEREOF, the parties hereto, by their duly authorized representatives, have affixed their hands.

COUNTY OF SAN MATEO

By: \_\_\_\_\_  
President, Board of Supervisors, San Mateo County

Date: \_\_\_\_\_

ATTEST:

By: \_\_\_\_\_  
Clerk of Said Board

Analytical Environmental Services (AES)

  
Contractor's Signature

Date: 12-11-12

Exhibit "A"

In consideration of the payments set forth in Exhibit "B", Contractor shall provide the following services:

Contractor shall complete the preparation of an Environmental Impact Report for the proposed Ascensions Heights project (County File number PLN2002-00517) to be re-circulated. A complete Scope of Work is included in Exhibit C.

Exhibit "B"

In consideration of the services provided by Contractor in Exhibit "A", County shall pay Contractor based on the following fee schedule in attached Exhibit "B":

# EXHIBIT B - SCHEDULE OF CHARGES

AES schedule of hourly wage rates for the listing the labor categories, associated wage rates, and reimbursable expenses have been provided below.

Employee Category	Hourly Billing Rate
Principal	\$245
<b>Project Manager</b>	<b>\$140</b>
Analyst III	\$120
<b>Analyst II</b>	<b>\$110</b>
<b>Analyst I</b>	<b>\$105</b>
Cultural Resources Specialist	\$120
<b>Archaeologist III</b>	<b>\$110</b>
Archaeologist II	\$105
Archaeologist I	\$100
<b>Biologist III</b>	<b>\$120</b>
Biologist II	\$110
Biologist I	\$105
Sr. Graphic Designer	\$105
<b>Graphic Designer II</b>	<b>\$100</b>
Graphic Designer I	\$95
Office Administrator	\$100
Administrative Assistant III	\$90
Administrative Assistant II	\$85
<b>Administrative Assistant I</b>	<b>\$80</b>

Direct Costs	
Postage/Overnight Mail	Actual cost + 15%
Courier Charges	Actual cost + 15%
Mileage	Federal Rate - currently \$0.55 per mile + 15%
Other Direct Costs	Actual cost + 15%
In-house Copying Charges:	
Black & White	\$0.10 per page + 15%
Color	\$1 per page + 15%
CD duplication w/label & case	\$2.50 each + 15%

# EXHIBIT C - SCOPE OF WORK

## Project Understanding

The **Ascension Heights Subdivision Project (Proposed Project)** entails a request by the project proponent for the County of San Mateo to approve subdivision of six parcels on 21.13 acres into 21 lots for development of 19 single-family residences with the remaining 2 lots (approximately 7.81-acres) maintained as a conservation area. The project site is located adjacent to Ascension Drive and Bel Aire Road in unincorporated San Mateo County, approximately 0.87 miles north east of Highway 280 and 0.51 miles west of highway 92. Potable water would be provided by connection to the Mid-Peninsula Water District and wastewater collection would be provided by the Crystal Springs Sanitation District with treatment at the City of San Mateo Wastewater Treatment Plant. Development of the 19 subdivided lot into single-family residences would require 40,920 cubic yards of grading, of which 28,270 cubic yards would require exportation from the site. Accordingly, the project applicant also requires a grading permit from the County. Based on the size of the development, a Water Supply Assessment is not required for the Proposed Project. One significant consideration is the Cease and Desist Order (CDO) issued by the San Francisco Bay Regional Water Quality Control Board to the City of San Mateo, town of Hillsborough, and Crystal Springs County Sanitation District. The CDO was issued as a result of high infiltration rates of non wastewater during wet weather into the wastewater conveyance system resulting in associated decreases in sewage conveyance capacity which lead to unregulated releases of wastewater to surface waters. This issue will be addressed in the Draft EIR.

The Proposed Project is a re-design of a previous project that was denied by the San Mateo County Planning Commission in 2009. A Draft Environmental Impact Report (Draft EIR) and Final Environmental Impact Report (Final EIR) were prepared for the previously proposed project. The scope of services will utilize, to the extent feasible, existing information from the previous environmental process to provide a Revised EIR that meets the current CEQA guidelines as well as current legal precedent for the analysis of environmental impacts developed through CEQA case law.

## Scope of Services

### *Program Description*

The overall objective and focus of the work plan outlined below is the efficient preparation of a Revised EIR that meets the legal requirements of a complete, adequate, and objective statement of the Proposed Project's environmental consequences while incorporating background information and analysis prepared during the previous EIR process to the extent feasible and reasonable in a cost effective manner. The resulting Revised EIR document will provide a concise, integrated source of information for the public, county decision makers, and other permitting agencies including the California Department of Fish and Game, U.S. Army Corps of Engineers, and the Regional Water Quality Control Board.

## *County Direction*

AES works as an extension of County staff. Our Project Manager would take direction from the assigned County Project Manager. In this role, AES will pro-actively assist with meeting the stated project objectives by maintaining an up-to-date schedule that indicates deliverable due dates and responsible parties. AES has enjoyed similar working relationships with a variety of federal, state, and municipal agencies.

## *Proposed Course of Action*

**Task 1: Kick-Off Meeting, Project Initiation and Information Review.** AES will meet with the County to establish lines of communication, determine the nature and format of the document to be prepared, and obtain relevant documentation and project details. Following this meeting, AES will review all project documentation and related planning materials, including the additional information for the previous EIR that may not have been provided during development of this Scope of Work, and available planning documents including General Plan materials, utility master plans, the County's subdivision regulations, tree regulations, and the Countywide Transportation Plan. Following this review, AES will develop a final project schedule and work plan that meets the needs of the County.

**Deliverables:** AES will prepare a final work plan and schedule to be distributed to the project team via email within five (5) days of the project initiation meeting.

**Task 2: Initial Study, NOP and Scoping.** Following the project initiation meeting, AES will prepare a draft Initial Study (IS) that includes a checklist consistent with Appendix G of the CEQA Guidelines and County guidance. The IS will be used to screen nonsignificant environmental issues from further consideration within the EIR. Following completion of the IS, AES will prepare a Notice of Preparation (NOP). Flexibility will be built into the NOP in anticipation of minor adjustments to project layout and design. This Scope of Work assumes that the County will coordinate circulation of the IS/NOP to the public. AES's Sacramento Office is located mere blocks from the State Clearinghouse and can readily deliver the IS/NOP in a cost effective manner. AES will attend and provide environmental expertise at one public town hall/scoping meeting during the 30-day public review period starting with release of the NOP. It is assumed that the County will be responsible for reserving an appropriate venue for the meeting. AES shall prepare up to 4 poster board exhibits for the public town hall/scoping meeting.

**Deliverables:** AES will provide the County with an electronic version of the IS. AES will revise the IS based on a comprehensive set of comments received on the electronic version from the County. The IS will be included as an appendix to the Administrative Draft EIR. AES will provide an electronic copy of the draft NOP to the County for review. AES will revise the NOP based on a comprehensive set of comments received on the electronic version from the County. AES will provide electronic copies of the proposed poster board exhibits prior to the public town hall/scoping meeting for approval.

**Task 3: Administrative Draft Revised EIR Preparation.** AES will conduct field studies and analysis as necessary to prepare an Administrative Draft EIR (ADEIR) in accordance with the State CEQA Guidelines, and relevant case law. AES will review the results of the IS and scoping comments submitted during the NOP comment period to focus the EIR analysis on those issues that are identified as potentially significant. AES will prepare a summary list of relevant issues to be addressed within the project analysis and consult with the County regarding any revisions to the scope of EIR services, if necessary. Given the nature of the Proposed Project, AES anticipates the EIR will be rather comprehensive, with sections analyzing the direct, indirect, and cumulative effects associated with each of the following issue areas:

- Aesthetics
- Agricultural Resources
- Air Quality and Greenhouse Gases
- Biological Resources
- Cultural Resources
- Geology and Soils
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population and Housing
- Public Services
- Recreation
- Utilities and Service Systems
- Transportation and Traffic

As Lead Agency, the County will make the final determination regarding the content of the EIR. Upon award of the contract, AES and the County would consider each issue area and draft a more detailed work plan that clearly outlines the expectations of the County and the obligations of AES.

**Deliverables:** AES will provide the County with a total of three (3) bound hardcopies and one (1) CD copy in color PDF format of the ADEIR.

### *ADEIR Contents*

Executive Summary. This section will provide an overview of the Draft EIR (DEIR) and include a summary table of all identified environmental effects, mitigation, and the significance level of impacts before and after mitigation.

Introduction. This section will explain the applicability of CEQA to the Proposed Project, describes the CEQA public review process, summarizes significant issues raised during the scoping process, and outlines the organization of the EIR.

Project Description. This section will present the background of the Proposed Project and identify the County's objectives in pursuing the project. AES will incorporate detailed project information and exhibits provided by the Applicant and County to describe each component of the Proposed Project in sufficient detail to enable identification of the largest envelope of potential environmental impacts. All anticipated approvals, permits, and other actions that will rely on the EIR will be identified.

Environmental Setting and Analysis. Considered the heart of the EIR, this section will provide a separate subsection for each environmental issue area in which a potentially significant impact was identified during the IS and scoping process. Each issue area subsection will discuss the existing setting, regulatory framework, analysis methods and thresholds, anticipated project-related impacts, and recommended mitigation measures to reduce or avoid adverse effects.

Cumulative Impacts. AES will assess the cumulative impacts of the Proposed Project in connection with other reasonably foreseeable projects and build-out of the County's General Plan. If available, the cumulative analysis will also consider growth projections anticipated in the County's on-going General Plan Update. AES will work with the County and relevant agencies to develop a list of relevant projects and define the geographical scope of the cumulative analysis. Cumulative analysis will cover each issue area addressed under the Environmental Setting and Analysis section of the EIR. Anticipated project-related cumulative impacts will be identified and mitigation measures will be recommended to reduce or avoid adverse effects.

Project Alternatives. In accordance with CEQA Guidelines Section 15126.6, AES will work with the County and Applicant to develop up to four (4) alternatives that could feasibly attain most of the basic objectives of the Proposed Project and would substantially lessen one or more of the project's significant environmental effects. The following alternatives may be considered as part of this process, although it is anticipated that one or more may be eliminated from detailed consideration due to the increased potential for environmental impacts:

1. No Project Alternative. As required by CEQA, one of the alternatives will be a No Project Alternative. This alternative will assume that the Proposed Project would not occur. While it is anticipated that some environmental impacts would be reduced, the basic objectives of the project would not be accomplished and may result in greater effects associated with water quality and noncompliance with permit requirements.
2. Reduced Footprint Alternative. AES will work with the County to identify a mitigated project footprint alternative within the boundaries of the project site. It is anticipated that a reconfiguration of land uses and clustering of high density residential development would accomplish the goals of this alternative.
3. Reduced Density Alternative. AES will work with the County to define a reduced density alternative that would result in fewer residents on the project site, and thus fewer demands on public utilities and infrastructure.

According to CEQA Guidelines Section 15126.6(d), “the significant effects of an alternative shall be discussed, but in less detail than the significant effects of the project as proposed.” The assessment of project alternatives will be consistent with this requirement by presenting a sufficient amount of detail necessary to afford decision makers with a reasoned choice. In most cases, environmental analyses conducted for the Proposed Project will be applicable to alternative development scenarios. Qualitative analysis of air quality and noise impacts associated with project alternatives will be conducted.

### *Issue Area Analysis and Assumptions*

Aesthetics. Development of the Proposed Project would alter the visual character of the project site from open space to urban; however, the surrounding areas consist of housing developments of similar density and therefore impacts are anticipated to be less than significant. Using visual representations of the project to be provided by the Applicant and existing analysis from the 2009 EIR to the extent possible, AES will complete the following tasks to determine the level of potential impacts and the need for mitigation:

- Review the relevant visual quality standards contained in the County’s General Plan and consider the applicability of planning policies and ordinances related to aesthetics.
- Conduct reconnaissance field studies to assess the visual character of the project site and surrounding public view areas. Document existing visual conditions on the project site through photographs and detailed descriptions.
- Incorporate the existing three dimensional visual design exhibits of the proposed facilities prepared by Lea and Braze Engineering, Inc. for the Applicant into site and aerial photographs of the project site to assess impacts to aesthetics and viewsheds of the project region.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the aesthetics section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts and ensure consistency with relevant visual quality standards of the County’s General Plan.

Air Quality. Development of the Proposed Project would result in short-term emissions and fugitive dust during the construction phase and long-term emissions associated with vehicle traffic. AES will complete the following tasks to determine the level of potential air quality impacts and the need for mitigation.

- Review relevant local/regional air quality standards for the project area, including those issued by the Bay Area Air Quality Management District (AQMD) and California Air Resources Board (CARB).
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including the Federal Clean Air Act and California Clean Air Act.
- Document existing sources of air pollution and identify sensitive receptors that may be affected by development of the Proposed Project.
- AES will conduct a HRA for the Proposed Project. The assessment will use accepted County or Air District protocols to determine the necessity for dispersion modeling. AES will use either AeMOD

or CAL3QHCR modeling software to estimate concentrations at defined receptor locations and will consult with the Air District and County to determine the appropriate level of analysis.

- Identify short-term air quality impacts from construction emissions using CARB-approved URBEMIS- modeling software. In order to estimate construction emissions, AES will coordinate with the County and Applicant to acquire information regarding the nature of construction activities, types of equipment that will likely be used, and the anticipated total area of disturbance.
- Identify long-term regional air quality impacts from mobile and area source emissions using CARB approved URBEMIS modeling software. This analysis will include quantification of criteria air pollutants identified in the local air quality management plans and shall be conducted according to district methodologies. Mobile source emissions will be estimated using vehicle trip generation and distribution information provided in the traffic study prepared by RKH.
- Quantify greenhouse gas emissions as recommended within the recent amendments to the CEQA Guidelines. In accordance with this guidance, AES will provide a qualitative, performance based approach to reducing impacts. This effort will be closely coordinated within the County's General Plan Update Process to ensure consistent methodology and thresholds are being applied.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the air quality section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts from both construction and operation of the Proposed Project. Modeling runs will be included as an appendix to the EIR.

Agricultural Resources. The Proposed Project would not result in the conversion of prime agricultural land. Additionally, no Williamson Act contracts are held on the subject parcels. AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process. Should it be determined that Agricultural Resources should be included within the EIR, AES will complete the following tasks using the existing analysis from the 2009 EIR to the extent possible to determine the level of potential impacts to agricultural resources and the need for mitigation:

- Review the relevant local policies concerning the protection of farmlands, including those contained in the County General Plan and General Plan Update.
- Describe and map the important agricultural soils in the project area including Prime Farmland, Farmland of Statewide Importance and Unique Farmland.
- Review information on existing agricultural resource in the region and current urbanization trends.
- AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process.

Biological Resources. Development of the Proposed Project has the potential to impact special-status species and other biological resources, including the endangered Mission Blue Butterfly. This scope of work does not provide for protocol-level biological surveys or permitting. AES will complete the following tasks to determine the level of potential biological impacts and the need for mitigation:

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Federal Endangered Species Act, Fish and Wildlife Coordination Act, Migratory Bird Treaty Act, Clean Water Act (Sections 401 and 404), Magnuson Fisheries-Stevens Fishery

Conservation and Management Act, California Endangered Species Act, California Fish and Game Code, and Porter-Cologne Water Quality Control Act.

- Review existing information related to biological resources included within the Biological Resources Assessment prepared for the 2009 EIR.
- Conduct an updated query of the California Natural Diversity Database/RareFind, California Native Plant Society's Electronic Inventory, and the California Wildlife-Habitat Relationships database, and obtain current special-status species lists for the project area from the U.S. Fish and Wildlife Service (USFWS).
- Conduct a biological field survey of the project site to establish the potential for occurrences of special-status species or critical habitat and confirm the findings of the Biological Resources Assessment prepared by the Applicant.
- Incorporate information from existing studies and findings into the biological resources section of the EIR and recommend avoidance or mitigation measures to reduce any potentially significant impacts. In coordination with the County, AES will informally consult with USFWS and the California Department of Fish and Game to refine mitigation measures and meet regulatory requirements. This coordination will promote an efficient environmental review process for the Proposed Project.

Cultural Resources. Development of the Proposed Project could result in adverse impacts to previously documented, newly identified, or inadvertently discovered cultural resources. Preliminary site reconnaissance indicates that the project site has been substantially disturbed from agricultural activities; however, impacts to unanticipated archaeological resources discovered during construction are always a possibility. AES will complete the following tasks during preparation of the cultural resources section of the EIR.

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: CEQA Guidelines 15064.5 and PRC 21083.2, SB-18 – Tribal Consultation (required for General Plan Amendment), Section 106 of the National Historic Preservation Act (required for 404 permits)
- Conduct an updated records search at the Northwest Information Center of the California Historical Resources Information System.
- Request a sacred lands search and stakeholders list from the Native American Heritage Commission (NAHC). AES will send preliminary consultation letters to all Native American stakeholders identified by the NAHC.
- Conduct an intensive Phase-I pedestrian survey of the project site. The survey will include recordation of any newly identified sites on appropriate DPR forms. Records of previously identified sites will be updated if necessary. This scope of work assumes that no more than two relatively simple resources will require recordation or updating. Evaluation of site significance is not included in the enclosed cost estimate. If it is determined that identified site(s) need to be evaluated, AES will provide a detailed scope of work and cost estimate for this work.

- Assist the County with SB-18 consultation. SB-18 assistance will include identification of stakeholders, provision of invitation to consult language, and attendance at up to two meetings with tribal representatives.
- Conduct all surveys and records searches in compliance with Section 106 of National Historic Preservation Act in the event that federal permitting is required.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the cultural resources section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts. This Scope of Work does not provide for testing or data recovery of any identified archaeological sites.

Geology and Soils. Development of the Proposed Project has the potential to result in soil erosion or subject people or property to geologic or seismic risks. AES is teaming with Michelucci and Associates to conduct an Updated Geotechnical Study to supplement the geotechnical study they prepared for the 2009 EIR. AES will complete the following tasks during preparation of the geology and soils section of the EIR:

- Review the relevant local and regional planning policies and ordinances related to geology, soils and seismic hazards within the project area, including those contained in the County's General Plan.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Soil and Water Conservation Act, National Earthquake Hazards Reduction Program, Alquist-Priolo Earthquake Fault Zoning Act, Seismic Hazards Mapping Act, and California Building Standards Code.
- Identify soils types within the project area based on a review of U.S. Department of Agriculture soils surveys and field investigations to estimate the potential for erosion, settlement, and liquefaction; however, it is assumed that a geotechnical report or other appropriate analysis shall be conducted that determines the shrink/swell potential and stability of the soil to support the proposed facilities prior to construction.
- Review regional/local earthquake fault and seismic hazard maps to determine the potential for seismic related hazards.
- Incorporate findings of the Geotechnical Study prepared by Michelucci and Associates and existing analysis from the 2009 EIR to the extent possible into the geology and soils section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Hazards and Hazardous Materials. Development of the Proposed Project may subject people to hazardous materials or hazards. The majority of the project site has been formerly used for agricultural purposes. AES will complete the following tasks during preparation of the Hazards/Hazardous Materials section of the EIR:

- Review the relevant local and regional planning policies and ordinances related to hazards and hazardous materials within the project area, including those contained in the County's General Plan.

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Resources Conservation and Recovery Act, Hazardous and Solid Waste Management Acts, and Comprehensive Environmental Response, Compensation, and Liability Act.
- Request a database search from Environmental Data Services to identify whether the project site is listed on various local, state, or federal hazardous materials databases. AES will also search online database resources regarding facilities or sites identified as meeting the “Cortese List” requirements pursuant to Government Code Section 65962.5.
- AES will research historic land usage within and adjacent to the project site, including review of historic topographic maps and aerial photographs.
- AES will incorporate findings and existing analysis from the 2009 EIR to the extent possible into the hazards and hazardous materials section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Hydrology and Water Quality. Development of the Proposed Project would alter the existing drainage patterns on the project site during both construction and operation, potentially impacting run-off quantity and quality. AES understands that Lea and Braze have already completed an updated hydrological evaluation of the project site to assess drainage impacts associated with the development of impervious surfaces on the project site. AES will complete the following tasks during preparation of the Hydrology and Water Quality Section of the EIR:

- Review existing information concerning water quality in the project area and consider the applicability of relevant local/regional planning policies and ordinances.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including the Clean Water Act and Porter-Cologne Water Quality Act.
- Identify flood hazards on the site or in the immediate project area through Review of FEMA Flood Insurance maps, the proposed flood protection/prevention measures of the project (if needed), and determine residual effects on localized or downstream flooding.
- Peer review drainage plans, estimates of storm water volumes, and existing system capacities provided to AES by Lea and Braze during the hydrological study, the County and/or the Applicant.
- Using existing information, identify the general types and sources of water quality changes that may result from the proposed development. Evaluate potential impacts of runoff from the project site on the quality of receiving waters.
- Discuss the need to apply for an NPDES permit for construction activities. Identify guidelines and policies of the SFBRWQCB, U.S. Environmental Protection Agency, and County plans regarding water quality impacts from storm water runoff.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Hydrology and Water Quality section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Land Use and Planning. The Proposed Project would result in the subdivision of the project site for the development of 19 single-family residential units. Implementation of the Proposed Project must be

considered in light of existing policies included within the County's General Plan and General Plan Update. Additionally, the Proposed Project will introduce new land uses that may be incompatible with existing or planned land uses on adjacent properties. Based on an initial review of the General Plan and Land Use designations for the project site, the Proposed Project is consistent with the land use planning documents governing development on the project site and the density of development is consistent with zoning designations. Accordingly, AES anticipates that impacts to Land Use and Planning will be less than significant and no mitigation will be required. To ensure a complete analysis is provided, AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted land use studies associated with the project area and consider the applicability of relevant local/regional planning policies and ordinances.
- Identify existing, approved, and proposed land use and zoning designations within and surrounding the project site.
- Consider the consistency of the Proposed Project with existing applicable planning documents, and include "planning consistency matrix" as an appendix to the EIR.
- Assess potential long-term compatibility issues, as well as short-term issues associated with phased development and non-conforming land uses.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Land Use and Planning section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Noise. Development of the Proposed Project would result in a short-term increase in noise and vibration during the construction phase and would result in long-term noise increases related to traffic and operational activities that may impact sensitive receptors. AES will conduct a noise assessment of the project site and incorporate the analysis and conclusions into the Noise Section of the EIR. AES will complete the following task to determine the level of potential impacts and the need for mitigation.

- Existing Noise Levels: Conduct a detailed ambient noise survey to quantify existing noise conditions at the project site and at the nearest potentially affected noise-sensitive land uses. The survey will consist of continuous and short-term noise level measurements at as many locations deemed necessary to thoroughly identify existing noise conditions for the project area which will include traffic noise from State Route 280 and 92. To the extent that information contained in the 2009 EIR is still relevant, AES will make use of it.
- Prepare Technical Report in Support of the EIR Noise Section that will contain the results of the previous task in the above-described scope of work, as well as graphics showing noise measurement locations and potential noise mitigation locations as appropriate. The report will be included as an appendix to the EIR. AES will incorporate existing analysis from the 2009 EIR to the extent possible.

Public Services and Recreation: Development of the Proposed Project would result in an increased demand for public services and recreation, including public schools, law enforcement, and fire protection. Additionally, the increase in population as a result of the project will result in increased use of County and

regional recreational facilities. AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted studies associated with the project site and consider the applicability of relevant local/regional planning policies and ordinances..
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including:
  - Uniform Fire Code
  - California Health and Safety Code
- AES will update the public service provided questionnaires provided Appendix C of the 2009 Draft EIR. AES will contact local service providers, including the Sheriff's Department, Fire Department, County Parks Department, County Public Libraries, and School Districts to determine existing service levels in the project area and need for additional personnel, equipment, and facilities.
- Estimate the new service demands resulting from the development of the Proposed Project, including the increase in student enrollment, law enforcement demands, fire protection demands, and use of recreational facilities.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Public Services and Recreation section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Traffic and Circulation: Development of the Proposed Project would result in an increase in local traffic. AES is teaming with RKH for the preparation of a traffic analysis and study for the Proposed Project to determine the potential for adverse effects on traffic circulation and identify appropriate traffic improvements. AES will complete the following tasks during preparation of the transportation/traffic section of the EIR.

- Incorporate findings of the traffic impact analysis into the Transportation and Circulation section of the EIR.
- Assess potential impacts associated with pedestrian, bicycle, and public transportation, and recommend appropriate mitigation measures.
- Discuss potential short-term impacts associated with construction activities. It is anticipated that mitigation will likely include specific measures to be included within a Traffic Control Plan for construction activities.

Utilities and Service Systems: Development of the Proposed Project would result in an increased demand for public utilities, including potable water, wastewater treatment, drainage facilities, and solid waste services. AES is teaming with NV5, formerly Nolte and Associates to assess the potential impacts to sewer and water conveyance systems. The cost and scope assumes that the level of effort required is to update the analysis within the 2009 EIR and no modeling of conveyance capacities are required. AES will assess the potential impacts to other utility and service systems including solid waste, electricity, and telecommunications. AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted studies associated with the 2009 EIR and consider the applicability of relevant local/regional planning policies and ordinances.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: California Health and Safety Code, Integrated Waste Management Act, Water Management Planning Act, SB 610 – Water Availability Assessment. Based on the number of residential units, a Water Supply Assessment is not required under SB 610, which will be duly noted in the EIR.
- Coordinate with the County’s Public Utilities Department and local service providers to determine existing service levels in the project area.
- Estimate the new service demands resulting from the development of the Proposed Project, including water supply, wastewater, drainage and solid waste.
- Evaluate impacts to wastewater treatment and drainage facilities in light of information provided within NV5’s technical assessment.
- In accordance with thresholds provided in Appendix G of the CEQA Guidelines, evaluate physical environmental impacts resulting from proposed improvements to utility systems, including the any proposed upgrades to Crystal Springs County Special District and San Mateo Wastewater Treatment plant. This task does not include site visits to assess existing conditions of off-site improvements that may be required to update wastewater infrastructure to meet the wastewater demands of the project.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Public Services and Utilities section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

**Task 4: Draft EIR and Public Circulation.** AES will meet with the County to clarify any comments and questions raised during review of the ADEIR. AES will revise the ADEIR based on a single set of comprehensive comments provided by the County. AES will provide an electronic screen check version of the Draft EIR with track changes to the County for review prior to production. Following approval by the County, AES will facilitate preparation of the Notice of Availability (NOA) and public release of the DEIR.

AES technical staff will coordinate and attend one (1) public comment town hall meeting during the 45-day public comment period on the DEIR. AES will provide up to three (3) poster board displays for the meeting. It is assumed that the County will be responsible for reserving an appropriate venue. If desired, a court reporter will be provided by the County.

**Deliverables:** AES will provide the County with ten (10) bound hardcopies one (1) CD copy in color PDF format of the Draft EIR. Fifteen (15) CD copies of the Draft EIR with hardcopies of the Executive Summary will be submitted as required to the State Clearinghouse with the Notice of Availability. AES will provide electronic copies of the proposed poster board exhibits prior to the public town hall meeting for approval.

**Task 5: Final EIR and Mitigation Monitoring and Reporting Plan.** AES will compile comments received from the public and other interested parties during the 45-day public review period for the Draft EIR, and summarize key issues for discussion with the County. AES will meet with County staff to go over the approach for responding to key issues raised during the DEIR public review period. Following this meeting, AES will formulate responses, and make any necessary revisions to the EIR. This Scope of Work assumes a moderate level of effort will be required to respond to comments. A moderate level of effort is considered to be less than 15 comment letters and 50 individual substantive comments that require a response beyond comment noted. The Response to Comments and any refinements to the DEIR text will be incorporated into a “freestanding” Final EIR. AES will prepare a Mitigation Monitoring and Reporting Plan (MMRP) to support the County’s certification of the Final EIR. The MMRP will be referenced within the text of the Final EIR and will be included as an appendix in the final document.

**Deliverables:** AES will provide the County with a total of ten (10) bound hardcopies and one (1) CD copy in PDF format of the Final EIR.

**Task 6: Findings and Final EIR Certification Support.** AES will assist with preparation of the Findings of Fact and Statement of Overriding Considerations. AES will attend/present at one meeting with the Planning Commission, and up to two staff meetings for certification of the Final EIR and Findings and Statement of Overriding Considerations.

**Task 7: Project Management and Meetings.** The AES management team will complete the myriad of small and often unforeseen tasks required to implement the preparation of an EIR. This includes numerous phone calls and emails necessary to facilitate information exchange between the Project Team and jurisdictional agencies, as well as the time required to prepare agendas, meeting minutes, schedules, and other such documents. Under this task, AES will:

- Attend a scoping hearing;
- Participate in up to 3 (3) two-hour project coordination meetings with planning staff at the County offices for the development of the Draft EIR;
- Attend up to two (2) Planning Commission hearings; and
- Participate in up to ten (10) one-hour project related conference calls with members of the project team and jurisdictional agencies.

**Deliverables:** AES will submit monthly status reports to the Project Team via email by the fifth business day of each month. AES will prepare and distribute minutes for each project-related meeting that will outline key decisions and action items.

Good morning Heather,  
I'll have to follow-up with Jim Monday morning regarding yesterday's meeting with the Ascension Heights group. Unfortunately, I had to go home sick yesterday shortly after lunch, and obviously I'm out today. Depending on how it went and the outcome, I'll have an idea of the level of edits needed, or if we need to postpone to the next BOS date. I'll follow up with you on Monday.

Ascension Heights Subdivision Project  
(County File number PLN2002-00517)

Dear Dave,

With your support, on April 11, 2013 representatives of the Homeowners Associations within CSA1 met with Jim Eggermeyer and Tim Fox to discuss the content of the statement of work in the EIR consultant contract. During discussions we were told the County would benefit if the statement of work in the EIR consultant contract remained relatively non-specific to facilitate any future negotiations with the EIR consultant. In addition, because James Castaneda, County Planner for this project, was unable to attend the meeting, we were not able to discuss in depth the issues outlined in our letter of April 3, 2013.

Our experiences with the 2009 DEIR demonstrated Community input was totally ineffective in ensuring adequate analyses were included in the DEIR. When we identified confusing, incomplete, or missing analyses, our Public Comments were misconstrued, inadequately responded to, or determined to be 'out of scope' and not relevant with no meaningful justifications offered. We were informed the EIR consultant efforts had been completed and there were neither funds nor time for any further analyses. Ultimately, our input had no measurable influence on the DEIR contents, analyses or recommendations, leading to an inadequate DEIR.

Despite our discussion with Mr. Fox and Mr. Eggemeyer on April 11th—we certainly appreciate their efforts—, the Community still believes strongly the EIR process will be improved substantially by incorporating our detailed concerns sufficiently early into the Initial Study/ADEIR/DEIR process while there are sufficient funds and time to produce accurate and relevant analyses.

For the above reasons, we request County Planning involve Community representatives in a detailed discussion of our concerns at several stages of the EIR process; specifically, insuring the Initial Study does not exclude important environmental issues, the ADEIR accurately represents the Community concerns, and sufficient analyses are incorporated into the DEIR to enable County Planning Commission and Board of Supervisors to make informed decisions.

We thank you for arranging this meeting, your continued interest, and look to your further assistance in this matter.

Jerry

**Date:** 4/24/2013 10:02 AM  
**Subject:** Please DELETE the first packet I sent you!!  
**Attachments:** 20130507\_DRAFT BOS Agenda.pdf

Hi All,

I accidently sent you all the **FULL** agenda packet (supporting docs included!) please ignore/delete this email because it was intended to go to the Board, their Aides, the CMO & ACO.

Attached is the **DRAFT** agenda for the Agenda Review meeting scheduled for tomorrow, April 25th @ 9:00 a.m. in the CMO conference room.

Thanks,  
Becky

Hi James,

I downloaded the complete Ascension Heights files from SIRE in their final form for the 5/7/13 BoS meeting. Thank you!

Heather

# AGENDA

**Board Members**

Dave Pine  
Carole Groom  
Don Horsley  
Warren Slocum  
Adrienne J. Tissier

**County Manager/  
Clerk of the Board**  
John L. Maltbie

**County Counsel**  
John C. Beiers

Hall of Justice • 400 County Center • Redwood City • California 94063 • 650-363-4653 • [www.smcgov.org](http://www.smcgov.org)

**REGULAR MEETING  
SAN MATEO COUNTY BOARD OF SUPERVISORS  
TUESDAY, MAY 07, 2013  
9:00 A.M.**

*Meetings are accessible to people with disabilities. Individuals who need special assistance or a disability-related modification or accommodation (including auxiliary aids or services) to participate in this meeting, or who have a disability and wish to request an alternative format for the agenda, meeting notice, agenda packet or other writings that may be distributed at the meeting, should contact Rebecca Romero, Agenda Administrator at least 2 working days before the meeting at (650) 363-1802 and/or [rxromero@smcgov.org](mailto:rxromero@smcgov.org). Notification in advance of the meeting will enable the County to make reasonable arrangements to ensure accessibility to this meeting and the materials related to it. Attendees to this meeting are reminded that other attendees may be sensitive to various chemical based products.*

*If you wish to speak to the Board, please fill out a speaker's slip located on the table near the door. If you have anything that you wish distributed to the Board and included in the official record, please hand it to the Clerk of the Board who will distribute the information to the Board members and staff.*

**PLEDGE OF ALLEGIANCE**

**ROLL CALL**

**PUBLIC COMMENT**

(This item is reserved for persons wishing to address the Board on any County-related matters not otherwise on this agenda, and on any listed agenda items other than those Matters Set for a Specified Time or on the Regular Agenda. Members of the public who wish to address the Board should complete a speaker request form. Speakers are customarily limited to two minutes.)

**ACTION TO SET AGENDA and TO APPROVE CONSENT AGENDA ITEMS**

(This item is to set the final consent and regular agenda, and for the approval of the items listed on the consent agenda. All items on the consent agenda are approved by one action.)

## **PRESENTATIONS AND AWARDS**

1. Presentation of a resolution honoring the Friends of Edgewood upon their 20th anniversary (Supervisor Don Horsley)
2. Presentation of a resolution honoring the renovation and reopening of the HIP Housing Willow Road Affordable Housing Project (Supervisor Warren Slocum)
3. Presentation of a proclamation designating May 2013 as Asthma Awareness Month (Supervisor Carole Groom)
4. Presentation of a proclamation designating May 2013 as Older Americans Month (Supervisor Adrienne Tissier)
  - A) Presentation of the 2012 Annual Report by the San Mateo County Commission on Aging
5. Update on the San Mateo County Reusable Bag Ordinance (Supervisors Carole Groom and Adrienne Tissier)

## **MATTERS SET FOR SPECIFIED TIME**

Times listed under this section are approximate. The Board makes every effort to adhere to the times listed, but in some cases, because of unexpected presentations, items may not be heard precisely at the time scheduled. In no case will any item be heard before the scheduled time.

6. 9:00 a.m.

Public hearing to consider Resolutions of Necessity Determining that the Public Interest and Necessity Require Acquisition of Real Property located in Burlingame for the Interchange 101 at Broadway Project and directing the filing of Eminent Domain proceedings

- A) Report and recommendation
- B) Close hearing
- C) Adopt resolutions

Heather Hardy | Executive Secretary, Planning and Building Department | County of San Mateo  
| 455 County Center 2<sup>nd</sup> Floor Redwood City, CA 94063 | (650)363-1859

**COUNTY OF SAN MATEO**  
Inter-Departmental Correspondence  
Planning and Building

**Date:** April 18, 2013  
**Board Meeting Date:** May 7, 2013  
**Special Notice / Hearing:** None  
**Vote Required:** 4/5ths

**To:** Honorable Board of Supervisors  
**From:** Jim Eggemeyer, Community Development Director  
**Subject:** Agreement with Analytical Environmental Services

**RECOMMENDATION:**

- A. Adopt a Resolution authorizing an Agreement with Analytical Environmental Services to prepare Draft and Final Environmental Impact Reports for the Ascension Heights Subdivision for the term of May 9, 2013 through May 9, 2014, in an amount not to exceed \$113,075.
- B. Resolution authorizing an Appropriation Transfer Request in the amount of \$113,075 from unanticipated revenue to Contract Services.

**BACKGROUND:**

In 2003, the applicant, San Mateo Real Estate and Construction, applied to subdivide a collection of six parcels located in the unincorporated San Mateo Highlands area of San Mateo County. The proposed subdivision would have created 25 parcels capable of being developed with single-family residences. Given the nature of the project's scope, an Environmental Impact Report (EIR) was prepared in accordance with the California Environmental Quality Act (CEQA). In December 2009, the Planning Commission denied the proposal, and subsequently the EIR was not certified. The applicant appealed the decision to the Board of Supervisors to allow consideration of an alternative design. In June 2010, the Board of Supervisors remanded the project back to the Planning Commission to consider an alternative design to the project, subject to all processing requirements and necessary reviews.

**DISCUSSION:**

As now proposed, the revised project consists of 19 developable parcels. The current proposal would result in less grading for the necessary infrastructure. Given the change in scope of the project, it is necessary to re-circulate an EIR that is reflective of those changes.

In August 2012, the Planning and Building Department conducted a Request for Proposals to solicit interested firms to perform the aforementioned environmental review and produce an EIR to circulate. Of five firms interviewed, Analytical Environmental Services was selected for its skills and expertise necessary to complete the task.

The Resolution would also allow the Community Development Director or designee to execute contract amendments to modify the maximum fiscal obligation by no more than \$25,000 (in aggregate), and/or modify the contract term and/or services so long as the modified term or services is/are within the current or revised fiscal provisions.

County Counsel has reviewed and approved the Agreement and Resolution as to form.

The Contractor's insurance meets insurance certification requirements. The Contractor has assured compliance with the County's Contractor Employee Jury Service Ordinance, as well as all other contract provisions that are required by County ordinance and administrative memoranda, including but not limited to insurance, hold harmless, non-discrimination, and equal benefits.

This Agreement contributes to the Shared Vision 2025 outcome of a Livable Community by providing sufficient information about the project and potential environmental impacts upon which to make an informed decision regarding this land use request.

**PERFORMANCE MEASURE:**

<b>Measure</b>	<b>FY 2012-13 Estimated</b>	<b>FY 2013-14 Projected</b>
Percent of tasks completed to produce a Final EIR	10%	90%

**FISCAL IMPACT:**

The term of the Agreement is from May 9, 2013 through May 9, 2014. The total obligation under this Agreement is \$113,075 and is funded entirely by the applicant, San Mateo Real Estate and Construction. There is no Net County Cost.

## REQUEST FOR PROPOSAL PROCESS MATRIX

1.	General description of RFP	Preparation of a Revised Environmental Impact Report for the "Ascension Heights Subdivision" project.
2.	List key evaluation criteria	Compare firm experiences, quality of firm and key staff, quality of experience of lead personal, understanding project requirements, project management, and schedules/timing.
3.	Where advertised	Posted on the Planning and Building website.
4.	In addition to any advertisement, list others to whom the RFP announcement was sent	Direct mail to twelve (12) environmental consultant firms in the Bay Area and California.
5.	Total number of RFPs sent to prospective proposers	Twelve (12).
6.	Number of proposals received	Six (6) firms submitted proposals.
7.	Who evaluated the proposals	Three (3) representatives from Planning and Building Department.
8. **RESOLUTION NO. \_\_\_\_\_**

**BOARD OF SUPERVISORS, COUNTY OF SAN MATEO, STATE OF CALIFORNIA**

\* \* \* \* \*

**RESOLUTION AUTHORIZING AN AGREEMENT WITH ANALYTICAL ENVIRONMENTAL SERVICES TO PREPARE DRAFT AND FINAL ENVIRONMENTAL IMPACT REPORTS FOR THE ASCENSION HEIGHTS SUBDIVISION FOR THE TERM OF MAY 9, 2013 THROUGH MAY 9, 2014, IN AN AMOUNT NOT TO EXCEED \$113,075**

---

**RESOLVED**, by the Board of Supervisors of the County of San Mateo, State of California, that

**WHEREAS**, the County and Analytical Environmental Services wish to enter into an Agreement, reference to which is hereby made for further particulars, whereby Analytical Environmental Services for the term of May 9, 2013 through May 9, 2014 will prepare Draft and Final Environmental Impact Reports for a maximum fiscal obligation of \$113,075; and

**WHEREAS**, this Board has been presented with a form of said Agreement and has examined and approved same as to both form and content and desires to enter into it.

**NOW, THEREFORE, IT IS HEREBY DETERMINED AND ORDERED** that the President of this Board of Supervisors be, and is hereby, authorized and directed to execute said Agreement for and on behalf of the County of San Mateo, and the Clerk of this Board shall attest the President's signature thereto.

**BE IT FURTHER RESOLVED**, that the Community Development Director or designee is authorized to execute contract amendments which modify the County's maximum fiscal obligation by no more than \$25,000 (in aggregate), and/or modify the contract term and/or services so long as the modified term or services is/are within the current or revised fiscal provisions.

COUNTY OF SAN MATEO

ATTEST: \_\_\_\_\_  
Clerk of Said Board

**AGREEMENT BETWEEN THE COUNTY OF SAN MATEO AND  
ANALYTICAL ENVIRONMENTAL SERVICES**

THIS AGREEMENT, entered into this \_\_\_ day of \_\_\_\_\_ 2013, by and between the COUNTY OF SAN MATEO, hereinafter called "County," and Analytical Environmental Services, hereinafter called "Contractor."

W I T N E S S E T H:

WHEREAS, pursuant to Government Code, Section 31000, County may contract with independent contractors for the furnishing of such services to or for County or any Department thereof;

WHEREAS, it is necessary and desirable that Contractor be retained for the purpose of preparing an Environmental Impact Report for the proposed Ascensions Heights subdivision project (County File number PLN2002-00517) to be re-circulated.

**NOW, THEREFORE, IT IS HEREBY AGREED BY THE PARTIES HERETO AS FOLLOWS:**

**1. Exhibits and Attachments**

The following exhibits and attachments are included hereto and incorporated by reference herein:

- Exhibit A—Services
- Exhibit B—Payments and rates
- Exhibit C—Scope of Work

**2. Services to be performed by Contractor**

In consideration of the payments set forth herein and in Exhibit "B," Contractor shall perform services for County in accordance with the terms, conditions and specifications set forth herein and in Exhibit "A."

**3. Payments**

In consideration of the services provided by Contractor in accordance with all terms, conditions and specifications set forth herein and in Exhibit "A," County shall make payment to Contractor based on the rates and in the manner specified in Exhibit "B." The County reserves the right to withhold payment if the County determines that the quantity or quality of the work performed is unacceptable. In no event shall the County's total fiscal obligation under this Agreement exceed One Hundred Thirteen Thousand Seventy-Five Dollars, \$113,075.

**4. Term and Termination**

Subject to compliance with all terms and conditions, the term of this Agreement shall be from May 9, 2013 through May 9, 2014.

This Agreement may be terminated by Contractor, the Director of Community Development or his/her designee at any time without a requirement of good cause upon thirty (30) days' written notice to the other party.

In the event of termination, all finished or unfinished documents, data, studies, maps, photographs, reports, and materials (hereafter referred to as materials) prepared by Contractor under this Agreement shall become the property of the County and shall be promptly delivered to the County. Upon termination, the Contractor may make and retain a copy of such materials. Subject to availability of funding, Contractor shall be entitled to receive payment for work/services provided prior to termination of the Agreement. Such payment shall be that portion of the full payment which is determined by comparing the work/services completed to the work/services required by the Agreement.

**5. Availability of Funds**

The County may terminate this Agreement or a portion of the services referenced in the Attachments and Exhibits based upon unavailability of Federal, State, or County funds, by providing written notice to Contractor as soon as is reasonably possible after the County learns of said unavailability of outside funding.

**6. Relationship of Parties**

Contractor agrees and understands that the work/services performed under this Agreement are performed as an independent Contractor and not as an employee of the County and that Contractor acquires none of the rights, privileges, powers, or advantages of County employees.

**7. Hold Harmless**

Contractor shall indemnify and save harmless County, its officers, agents, employees, and servants from all claims, suits, or actions of every name, kind, and description, brought for, or on account of: (A) injuries to or death of any person, including Contractor, or (B) damage to any property of any kind whatsoever and to whomsoever belonging, (C) any sanctions, penalties, or claims of damages resulting from Contractor's failure to comply with the requirements set forth in the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and all Federal regulations promulgated thereunder, as amended, or (D) any other loss or cost, including but not limited to that caused by the concurrent active or passive negligence of County, its officers, agents, employees, or servants, resulting from the performance of any work required of Contractor or payments made pursuant to this Agreement, provided that this shall not apply to injuries or damage for which County has been found in a court of competent jurisdiction to be solely liable by reason of its own negligence or willful misconduct.

The duty of Contractor to indemnify and save harmless as set forth herein, shall include the duty to defend as set forth in Section 2778 of the California Civil Code.

**8. Assignability and Subcontracting**

Contractor shall not assign this Agreement or any portion thereof to a third party or subcontract with a third party to provide services required by contractor under this Agreement without the prior written consent of County. Any such assignment or subcontract without the County's prior written consent shall give County the right to automatically and immediately terminate this Agreement.

**9. Insurance**

The Contractor shall not commence work or be required to commence work under this Agreement unless and until all insurance required under this paragraph has been obtained and such insurance has been approved by Risk Management, and Contractor shall use diligence to obtain such insurance and to obtain such approval. The Contractor shall furnish the County with certificates of insurance evidencing the required coverage, and there shall be a specific contractual liability endorsement extending the Contractor's coverage to include the contractual liability assumed by the Contractor pursuant to this Agreement. These certificates shall specify or be endorsed to provide that thirty (30) days' notice must be given, in writing, to the County of any pending change in the limits of liability or of any cancellation or modification of the policy.

(1) **Worker's Compensation and Employer's Liability Insurance** The Contractor shall have in effect during the entire life of this Agreement Workers' Compensation and Employer's Liability Insurance providing full statutory coverage. In signing this Agreement, the Contractor certifies, as required by Section 1861 of the California Labor Code, that it is aware of the provisions of Section 3700 of the California Labor Code which requires every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of the Code, and will comply with such provisions before commencing the performance of the work of this Agreement.

(2) **Liability Insurance** The Contractor shall take out and maintain during the life of this Agreement such Bodily Injury Liability and Property Damage Liability Insurance as shall protect him/her while performing work covered by this Agreement from any and all claims for damages for bodily injury, including accidental death, as well as any and all claims for property damage which may arise from contractors operations under this Agreement, whether such operations be by himself/herself or by any sub-contractor or by anyone directly or indirectly employed by either of them. Such insurance shall be combined single limit bodily injury and property damage for each occurrence and shall be not less than the amount specified below.

Such insurance shall include:

- (a) Comprehensive General Liability . . . . . \$1,000,000
- (b) Motor Vehicle Liability Insurance . . . . . \$1,000,000
- (c) Professional Liability . . . . . \$1,000,000

County and its officers, agents, employees and servants shall be named as additional insured on any such policies of insurance, which shall also contain a provision that the insurance afforded thereby to the County, its officers, agents, employees and servants shall be primary insurance to the full limits of liability of the policy, and that if the County or its officers and employees have other insurance against the loss covered by such a policy, such other insurance shall be excess insurance only.

In the event of the breach of any provision of this section, or in the event any notice is received which indicates any required insurance coverage will be diminished or canceled, the County of San Mateo at its option, may, notwithstanding any other provision of this Agreement to the contrary, immediately declare a material breach of this Agreement and suspend all further work pursuant to this Agreement.

**10. Compliance with laws; payment of Permits/Licenses**

All services to be performed by Contractor pursuant to this Agreement shall be performed in accordance with all applicable Federal, State, County, and municipal laws, ordinances and regulations, including, but not limited to, the Health Insurance Portability and Accountability Act of 1996 (HIPAA), and the Federal Regulations promulgated thereunder, as amended, and will comply with the Business Associate requirements set forth in Attachment "H," and the Americans with Disabilities Act of 1990, as amended, and Section 504 of the Rehabilitation Act of 1973, as amended and attached hereto and incorporated by reference herein as Attachment "I," which prohibits discrimination on the basis of handicap in programs and activities receiving any Federal or County financial assistance. Such services shall also be performed in accordance with all applicable ordinances and regulations, including, but not limited to, appropriate licensure, certification regulations, provisions pertaining to confidentiality of records, and applicable quality assurance regulations. In the event of a conflict between the terms of this Agreement and State, Federal, County, or municipal law or regulations, the requirements of the applicable law will take precedence over the requirements set forth in this Agreement. Further, Contractor certifies that the Contractor and all of its subcontractors will adhere to all applicable provisions of Chapter 4.106 of the San Mateo County Ordinance Code, which regulates the use of disposable food service ware.

Contractor will timely and accurately complete, sign, and submit all necessary documentation of compliance.

**11. Non-Discrimination and Other Requirements**

- A. *Section 504 applies only to Contractors who are providing services to members of the public.* Contractor shall comply with § 504 of the Rehabilitation Act of 1973, which provides that no otherwise qualified handicapped individual shall, solely by reason of a disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination in the performance of this Agreement.
- B. *General non-discrimination.* No person shall, on the grounds of race, color, religion, ancestry, gender, age (over 40), national origin, medical condition (cancer), physical or mental disability, sexual orientation, pregnancy, childbirth or related medical condition, marital status, or political affiliation be denied any benefits or subject to discrimination under this Agreement.

- C. *Equal employment opportunity.* Contractor shall ensure equal employment opportunity based on objective standards of recruitment, classification, selection, promotion, compensation, performance evaluation, and management relations for all employees under this Agreement. Contractor's equal employment policies shall be made available to County of San Mateo upon request.
- D. *Violation of Non-discrimination provisions.* Violation of the non-discrimination provisions of this Agreement shall be considered a breach of this Agreement and subject the Contractor to penalties, to be determined by the County Manager, including but not limited to
  - i) termination of this Agreement;
  - ii) disqualification of the Contractor from bidding on or being awarded a County contract for a period of up to 3 years;
  - iii) liquidated damages of \$2,500 per violation;
  - iv) imposition of other appropriate contractual and civil remedies and sanctions, as determined by the County Manager.

To effectuate the provisions of this section, the County Manager shall have the authority to examine Contractor's employment records with respect to compliance with this paragraph and/or to set off all or any portion of the amount described in this paragraph against amounts due to Contractor under the Contract or any other Contract between Contractor and County.

Contractor shall report to the County Manager the filing by any person in any court of any complaint of discrimination or the filing by any person of any and all charges with the Equal Employment Opportunity Commission, the Fair Employment and Housing Commission or any other entity charged with the investigation of allegations within 30 days of such filing, provided that within such 30 days such entity has not notified Contractor that such charges are dismissed or otherwise unfounded. Such notification shall include the name of the complainant, a copy of such complaint, and a description of the circumstance. Contractor shall provide County with a copy of their response to the Complaint when filed.

- E. *Compliance with Equal Benefits Ordinance.* With respect to the provision of employee benefits, Contractor shall comply with the County Ordinance which prohibits contractors from discriminating in the provision of employee benefits between an employee with a domestic partner and an employee with a spouse.
- F. The Contractor shall comply fully with the non-discrimination requirements required by 41 CFR 60-741.5(a), which is incorporated herein as if fully set forth.

## **12. Compliance with Contractor Employee Jury Service Ordinance**

Contractor shall comply with the County Ordinance with respect to provision of jury duty pay to employees and have and adhere to a written policy that provides that its employees shall receive from the Contractor, on an annual basis, no less than five days of regular pay for actual jury service in San Mateo County. The policy may provide that employees deposit any fees received for such jury service with the Contractor or that the Contractor deduct from the employees' regular pay the fees received for jury service.

**13. Retention of Records, Right to Monitor and Audit**

(a) CONTRACTOR shall maintain all required records for three (3) years after the COUNTY makes final payment and all other pending matters are closed, and shall be subject to the examination and/or audit of the County, a Federal grantor agency, and the State of California.

(b) Reporting and Record Keeping: CONTRACTOR shall comply with all program and fiscal reporting requirements set forth by appropriate Federal, State and local agencies, and as required by the COUNTY.

(c) CONTRACTOR agrees to provide to COUNTY, to any Federal or State department having monitoring or review authority, to COUNTY's authorized representatives, and/or their appropriate audit agencies upon reasonable notice, access to and the right to examine all records and documents necessary to determine compliance with relevant Federal, State, and local statutes, rules and regulations, and this Agreement, and to evaluate the quality, appropriateness and timeliness of services performed.

**14. Merger Clause**

This Agreement, including the Exhibits attached hereto and incorporated herein by reference, constitutes the sole Agreement of the parties hereto and correctly states the rights, duties, and obligations of each party as of this document's date. In the event that any term, condition, provision, requirement or specification set forth in this body of the agreement conflicts with or is inconsistent with any term, condition, provision, requirement or specification in any exhibit and/or attachment to this agreement, the provisions of this body of the agreement shall prevail. Any prior agreement, promises, negotiations, or representations between the parties not expressly stated in this document are not binding. All subsequent modifications shall be in writing and signed by the parties.

**15. Controlling Law and Venue**

The validity of this Agreement and of its terms or provisions, as well as the rights and duties of the parties hereunder, the interpretation, and performance of this Agreement shall be governed by the laws of the State of California. Any dispute arising out of this Agreement shall be venued either in the San Mateo County Superior Court or in the United States District Court for the Northern District of California.

**16. Notices**

Any notice, request, demand, or other communication required or permitted hereunder shall be deemed to be properly given when both (1) transmitted via facsimile to the telephone number listed below and (2) either deposited in the United State mail, postage prepaid, or when deposited for overnight delivery with an established overnight courier that provides a tracking number showing confirmation of receipt, for transmittal, charges prepaid, addressed to:

**In the case of County, to:**  
Director of Community Development  
Planning & Building Department  
455 County Center, Mail Drop PLN122  
Redwood City, CA 94063

**In the case of Contractor, to:**  
Analytical Environmental Services  
1801 7<sup>th</sup> Street, Ste 100  
Sacramento, CA 95811

In the event that the facsimile transmission is not possible, notice shall be given both by United States mail and an overnight courier as outlined above.

IN WITNESS WHEREOF, the parties hereto, by their duly authorized representatives, have affixed their hands.

COUNTY OF SAN MATEO

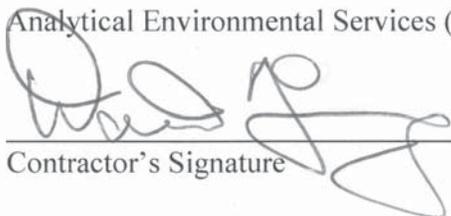

By: \_\_\_\_\_  
President, Board of Supervisors, San Mateo County

Date: \_\_\_\_\_

ATTEST:

By: \_\_\_\_\_  
Clerk of Said Board

Analytical Environmental Services (AES)

  
Contractor's Signature

Date: 12-11-12

Exhibit "A"

In consideration of the payments set forth in Exhibit "B", Contractor shall provide the following services:

Contractor shall complete the preparation of an Environmental Impact Report for the proposed Ascensions Heights project (County File number PLN2002-00517) to be re-circulated. A complete Scope of Work is included in Exhibit C.

Exhibit "B"

In consideration of the services provided by Contractor in Exhibit "A", County shall pay Contractor based on the following fee schedule in attached Exhibit "B":

# EXHIBIT B - SCHEDULE OF CHARGES

AES schedule of hourly wage rates for the listing the labor categories, associated wage rates, and reimbursable expenses have been provided below.

Employee Category	Hourly Billing Rate
Principal	\$245
<b>Project Manager</b>	<b>\$140</b>
Analyst III	\$120
<b>Analyst II</b>	<b>\$110</b>
<b>Analyst I</b>	<b>\$105</b>
Cultural Resources Specialist	\$120
<b>Archaeologist III</b>	<b>\$110</b>
Archaeologist II	\$105
Archaeologist I	\$100
<b>Biologist III</b>	<b>\$120</b>
Biologist II	\$110
Biologist I	\$105
Sr. Graphic Designer	\$105
<b>Graphic Designer II</b>	<b>\$100</b>
Graphic Designer I	\$95
Office Administrator	\$100
Administrative Assistant III	\$90
Administrative Assistant II	\$85
<b>Administrative Assistant I</b>	<b>\$80</b>

Direct Costs	
Postage/Overnight Mail	Actual cost + 15%
Courier Charges	Actual cost + 15%
Mileage	Federal Rate - currently \$0.55 per mile + 15%
Other Direct Costs	Actual cost + 15%
In-house Copying Charges:	
Black & White	\$0.10 per page + 15%
Color	\$1 per page + 15%
CD duplication w/label & case	\$2.50 each + 15%

# EXHIBIT C - SCOPE OF WORK

## Project Understanding

The **Ascension Heights Subdivision Project (Proposed Project)** entails a request by the project proponent for the County of San Mateo to approve subdivision of six parcels on 21.13 acres into 21 lots for development of 19 single-family residences with the remaining 2 lots (approximately 7.81-acres) maintained as a conservation area. The project site is located adjacent to Ascension Drive and Bel Aire Road in unincorporated San Mateo County, approximately 0.87 miles north east of Highway 280 and 0.51 miles west of highway 92. Potable water would be provided by connection to the Mid-Peninsula Water District and wastewater collection would be provided by the Crystal Springs Sanitation District with treatment at the City of San Mateo Wastewater Treatment Plant. Development of the 19 subdivided lot into single-family residences would require 40,920 cubic yards of grading, of which 28,270 cubic yards would require exportation from the site. Accordingly, the project applicant also requires a grading permit from the County. Based on the size of the development, a Water Supply Assessment is not required for the Proposed Project. One significant consideration is the Cease and Desist Order (CDO) issued by the San Francisco Bay Regional Water Quality Control Board to the City of San Mateo, town of Hillsborough, and Crystal Springs County Sanitation District. The CDO was issued as a result of high infiltration rates of non wastewater during wet weather into the wastewater conveyance system resulting in associated decreases in sewage conveyance capacity which lead to unregulated releases of wastewater to surface waters. This issue will be addressed in the Draft EIR.

The Proposed Project is a re-design of a previous project that was denied by the San Mateo County Planning Commission in 2009. A Draft Environmental Impact Report (Draft EIR) and Final Environmental Impact Report (Final EIR) were prepared for the previously proposed project. The scope of services will utilize, to the extent feasible, existing information from the previous environmental process to provide a Revised EIR that meets the current CEQA guidelines as well as current legal precedent for the analysis of environmental impacts developed through CEQA case law.

## Scope of Services

### *Program Description*

The overall objective and focus of the work plan outlined below is the efficient preparation of a Revised EIR that meets the legal requirements of a complete, adequate, and objective statement of the Proposed Project's environmental consequences while incorporating background information and analysis prepared during the previous EIR process to the extent feasible and reasonable in a cost effective manner. The resulting Revised EIR document will provide a concise, integrated source of information for the public, county decision makers, and other permitting agencies including the California Department of Fish and Game, U.S. Army Corps of Engineers, and the Regional Water Quality Control Board.

## *County Direction*

AES works as an extension of County staff. Our Project Manager would take direction from the assigned County Project Manager. In this role, AES will pro-actively assist with meeting the stated project objectives by maintaining an up-to-date schedule that indicates deliverable due dates and responsible parties. AES has enjoyed similar working relationships with a variety of federal, state, and municipal agencies.

## *Proposed Course of Action*

**Task 1: Kick-Off Meeting, Project Initiation and Information Review.** AES will meet with the County to establish lines of communication, determine the nature and format of the document to be prepared, and obtain relevant documentation and project details. Following this meeting, AES will review all project documentation and related planning materials, including the additional information for the previous EIR that may not have been provided during development of this Scope of Work, and available planning documents including General Plan materials, utility master plans, the County's subdivision regulations, tree regulations, and the Countywide Transportation Plan. Following this review, AES will develop a final project schedule and work plan that meets the needs of the County.

**Deliverables:** AES will prepare a final work plan and schedule to be distributed to the project team via email within five (5) days of the project initiation meeting.

**Task 2: Initial Study, NOP and Scoping.** Following the project initiation meeting, AES will prepare a draft Initial Study (IS) that includes a checklist consistent with Appendix G of the CEQA Guidelines and County guidance. The IS will be used to screen nonsignificant environmental issues from further consideration within the EIR. Following completion of the IS, AES will prepare a Notice of Preparation (NOP). Flexibility will be built into the NOP in anticipation of minor adjustments to project layout and design. This Scope of Work assumes that the County will coordinate circulation of the IS/NOP to the public. AES's Sacramento Office is located mere blocks from the State Clearinghouse and can readily deliver the IS/NOP in a cost effective manner. AES will attend and provide environmental expertise at one public town hall/scoping meeting during the 30-day public review period starting with release of the NOP. It is assumed that the County will be responsible for reserving an appropriate venue for the meeting. AES shall prepare up to 4 poster board exhibits for the public town hall/scoping meeting.

**Deliverables:** AES will provide the County with an electronic version of the IS. AES will revise the IS based on a comprehensive set of comments received on the electronic version from the County. The IS will be included as an appendix to the Administrative Draft EIR. AES will provide an electronic copy of the draft NOP to the County for review. AES will revise the NOP based on a comprehensive set of comments received on the electronic version from the County. AES will provide electronic copies of the proposed poster board exhibits prior to the public town hall/scoping meeting for approval.

**Task 3: Administrative Draft Revised EIR Preparation.** AES will conduct field studies and analysis as necessary to prepare an Administrative Draft EIR (ADEIR) in accordance with the State CEQA Guidelines, and relevant case law. AES will review the results of the IS and scoping comments submitted during the NOP comment period to focus the EIR analysis on those issues that are identified as potentially significant. AES will prepare a summary list of relevant issues to be addressed within the project analysis and consult with the County regarding any revisions to the scope of EIR services, if necessary. Given the nature of the Proposed Project, AES anticipates the EIR will be rather comprehensive, with sections analyzing the direct, indirect, and cumulative effects associated with each of the following issue areas:

- Aesthetics
- Agricultural Resources
- Air Quality and Greenhouse Gases
- Biological Resources
- Cultural Resources
- Geology and Soils
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population and Housing
- Public Services
- Recreation
- Utilities and Service Systems
- Transportation and Traffic

As Lead Agency, the County will make the final determination regarding the content of the EIR. Upon award of the contract, AES and the County would consider each issue area and draft a more detailed work plan that clearly outlines the expectations of the County and the obligations of AES.

**Deliverables:** AES will provide the County with a total of three (3) bound hardcopies and one (1) CD copy in color PDF format of the ADEIR.

### *ADEIR Contents*

Executive Summary. This section will provide an overview of the Draft EIR (DEIR) and include a summary table of all identified environmental effects, mitigation, and the significance level of impacts before and after mitigation.

Introduction. This section will explain the applicability of CEQA to the Proposed Project, describes the CEQA public review process, summarizes significant issues raised during the scoping process, and outlines the organization of the EIR.

Project Description. This section will present the background of the Proposed Project and identify the County's objectives in pursuing the project. AES will incorporate detailed project information and exhibits provided by the Applicant and County to describe each component of the Proposed Project in sufficient detail to enable identification of the largest envelope of potential environmental impacts. All anticipated approvals, permits, and other actions that will rely on the EIR will be identified.

Environmental Setting and Analysis. Considered the heart of the EIR, this section will provide a separate subsection for each environmental issue area in which a potentially significant impact was identified during the IS and scoping process. Each issue area subsection will discuss the existing setting, regulatory framework, analysis methods and thresholds, anticipated project-related impacts, and recommended mitigation measures to reduce or avoid adverse effects.

Cumulative Impacts. AES will assess the cumulative impacts of the Proposed Project in connection with other reasonably foreseeable projects and build-out of the County's General Plan. If available, the cumulative analysis will also consider growth projections anticipated in the County's on-going General Plan Update. AES will work with the County and relevant agencies to develop a list of relevant projects and define the geographical scope of the cumulative analysis. Cumulative analysis will cover each issue area addressed under the Environmental Setting and Analysis section of the EIR. Anticipated project-related cumulative impacts will be identified and mitigation measures will be recommended to reduce or avoid adverse effects.

Project Alternatives. In accordance with CEQA Guidelines Section 15126.6, AES will work with the County and Applicant to develop up to four (4) alternatives that could feasibly attain most of the basic objectives of the Proposed Project and would substantially lessen one or more of the project's significant environmental effects. The following alternatives may be considered as part of this process, although it is anticipated that one or more may be eliminated from detailed consideration due to the increased potential for environmental impacts:

1. No Project Alternative. As required by CEQA, one of the alternatives will be a No Project Alternative. This alternative will assume that the Proposed Project would not occur. While it is anticipated that some environmental impacts would be reduced, the basic objectives of the project would not be accomplished and may result in greater effects associated with water quality and noncompliance with permit requirements.
2. Reduced Footprint Alternative. AES will work with the County to identify a mitigated project footprint alternative within the boundaries of the project site. It is anticipated that a reconfiguration of land uses and clustering of high density residential development would accomplish the goals of this alternative.
3. Reduced Density Alternative. AES will work with the County to define a reduced density alternative that would result in fewer residents on the project site, and thus fewer demands on public utilities and infrastructure.

According to CEQA Guidelines Section 15126.6(d), “the significant effects of an alternative shall be discussed, but in less detail than the significant effects of the project as proposed.” The assessment of project alternatives will be consistent with this requirement by presenting a sufficient amount of detail necessary to afford decision makers with a reasoned choice. In most cases, environmental analyses conducted for the Proposed Project will be applicable to alternative development scenarios. Qualitative analysis of air quality and noise impacts associated with project alternatives will be conducted.

### *Issue Area Analysis and Assumptions*

Aesthetics. Development of the Proposed Project would alter the visual character of the project site from open space to urban; however, the surrounding areas consist of housing developments of similar density and therefore impacts are anticipated to be less than significant. Using visual representations of the project to be provided by the Applicant and existing analysis from the 2009 EIR to the extent possible, AES will complete the following tasks to determine the level of potential impacts and the need for mitigation:

- Review the relevant visual quality standards contained in the County’s General Plan and consider the applicability of planning policies and ordinances related to aesthetics.
- Conduct reconnaissance field studies to assess the visual character of the project site and surrounding public view areas. Document existing visual conditions on the project site through photographs and detailed descriptions.
- Incorporate the existing three dimensional visual design exhibits of the proposed facilities prepared by Lea and Braze Engineering, Inc. for the Applicant into site and aerial photographs of the project site to assess impacts to aesthetics and viewsheds of the project region.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the aesthetics section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts and ensure consistency with relevant visual quality standards of the County’s General Plan.

Air Quality. Development of the Proposed Project would result in short-term emissions and fugitive dust during the construction phase and long-term emissions associated with vehicle traffic. AES will complete the following tasks to determine the level of potential air quality impacts and the need for mitigation.

- Review relevant local/regional air quality standards for the project area, including those issued by the Bay Area Air Quality Management District (AQMD) and California Air Resources Board (CARB).
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including the Federal Clean Air Act and California Clean Air Act.
- Document existing sources of air pollution and identify sensitive receptors that may be affected by development of the Proposed Project.
- AES will conduct a HRA for the Proposed Project. The assessment will use accepted County or Air District protocols to determine the necessity for dispersion modeling. AES will use either AeMOD

or CAL3QHCR modeling software to estimate concentrations at defined receptor locations and will consult with the Air District and County to determine the appropriate level of analysis.

- Identify short-term air quality impacts from construction emissions using CARB-approved URBEMIS- modeling software. In order to estimate construction emissions, AES will coordinate with the County and Applicant to acquire information regarding the nature of construction activities, types of equipment that will likely be used, and the anticipated total area of disturbance.
- Identify long-term regional air quality impacts from mobile and area source emissions using CARB approved URBEMIS modeling software. This analysis will include quantification of criteria air pollutants identified in the local air quality management plans and shall be conducted according to district methodologies. Mobile source emissions will be estimated using vehicle trip generation and distribution information provided in the traffic study prepared by RKH.
- Quantify greenhouse gas emissions as recommended within the recent amendments to the CEQA Guidelines. In accordance with this guidance, AES will provide a qualitative, performance based approach to reducing impacts. This effort will be closely coordinated within the County's General Plan Update Process to ensure consistent methodology and thresholds are being applied.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the air quality section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts from both construction and operation of the Proposed Project. Modeling runs will be included as an appendix to the EIR.

Agricultural Resources. The Proposed Project would not result in the conversion of prime agricultural land. Additionally, no Williamson Act contracts are held on the subject parcels. AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process. Should it be determined that Agricultural Resources should be included within the EIR, AES will complete the following tasks using the existing analysis from the 2009 EIR to the extent possible to determine the level of potential impacts to agricultural resources and the need for mitigation:

- Review the relevant local policies concerning the protection of farmlands, including those contained in the County General Plan and General Plan Update.
- Describe and map the important agricultural soils in the project area including Prime Farmland, Farmland of Statewide Importance and Unique Farmland.
- Review information on existing agricultural resource in the region and current urbanization trends.
- AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process.

Biological Resources. Development of the Proposed Project has the potential to impact special-status species and other biological resources, including the endangered Mission Blue Butterfly. This scope of work does not provide for protocol-level biological surveys or permitting. AES will complete the following tasks to determine the level of potential biological impacts and the need for mitigation:

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Federal Endangered Species Act, Fish and Wildlife Coordination Act, Migratory Bird Treaty Act, Clean Water Act (Sections 401 and 404), Magnuson Fisheries-Stevens Fishery

Conservation and Management Act, California Endangered Species Act, California Fish and Game Code, and Porter-Cologne Water Quality Control Act.

- Review existing information related to biological resources included within the Biological Resources Assessment prepared for the 2009 EIR.
- Conduct an updated query of the California Natural Diversity Database/RareFind, California Native Plant Society's Electronic Inventory, and the California Wildlife-Habitat Relationships database, and obtain current special-status species lists for the project area from the U.S. Fish and Wildlife Service (USFWS).
- Conduct a biological field survey of the project site to establish the potential for occurrences of special-status species or critical habitat and confirm the findings of the Biological Resources Assessment prepared by the Applicant.
- Incorporate information from existing studies and findings into the biological resources section of the EIR and recommend avoidance or mitigation measures to reduce any potentially significant impacts. In coordination with the County, AES will informally consult with USFWS and the California Department of Fish and Game to refine mitigation measures and meet regulatory requirements. This coordination will promote an efficient environmental review process for the Proposed Project.

Cultural Resources. Development of the Proposed Project could result in adverse impacts to previously documented, newly identified, or inadvertently discovered cultural resources. Preliminary site reconnaissance indicates that the project site has been substantially disturbed from agricultural activities; however, impacts to unanticipated archaeological resources discovered during construction are always a possibility. AES will complete the following tasks during preparation of the cultural resources section of the EIR.

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: CEQA Guidelines 15064.5 and PRC 21083.2, SB-18 – Tribal Consultation (required for General Plan Amendment), Section 106 of the National Historic Preservation Act (required for 404 permits)
- Conduct an updated records search at the Northwest Information Center of the California Historical Resources Information System.
- Request a sacred lands search and stakeholders list from the Native American Heritage Commission (NAHC). AES will send preliminary consultation letters to all Native American stakeholders identified by the NAHC.
- Conduct an intensive Phase-I pedestrian survey of the project site. The survey will include recordation of any newly identified sites on appropriate DPR forms. Records of previously identified sites will be updated if necessary. This scope of work assumes that no more than two relatively simple resources will require recordation or updating. Evaluation of site significance is not included in the enclosed cost estimate. If it is determined that identified site(s) need to be evaluated, AES will provide a detailed scope of work and cost estimate for this work.

- Assist the County with SB-18 consultation. SB-18 assistance will include identification of stakeholders, provision of invitation to consult language, and attendance at up to two meetings with tribal representatives.
- Conduct all surveys and records searches in compliance with Section 106 of National Historic Preservation Act in the event that federal permitting is required.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the cultural resources section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts. This Scope of Work does not provide for testing or data recovery of any identified archaeological sites.

Geology and Soils. Development of the Proposed Project has the potential to result in soil erosion or subject people or property to geologic or seismic risks. AES is teaming with Michelucci and Associates to conduct an Updated Geotechnical Study to supplement the geotechnical study they prepared for the 2009 EIR. AES will complete the following tasks during preparation of the geology and soils section of the EIR:

- Review the relevant local and regional planning policies and ordinances related to geology, soils and seismic hazards within the project area, including those contained in the County's General Plan.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Soil and Water Conservation Act, National Earthquake Hazards Reduction Program, Alquist-Priolo Earthquake Fault Zoning Act, Seismic Hazards Mapping Act, and California Building Standards Code.
- Identify soils types within the project area based on a review of U.S. Department of Agriculture soils surveys and field investigations to estimate the potential for erosion, settlement, and liquefaction; however, it is assumed that a geotechnical report or other appropriate analysis shall be conducted that determines the shrink/swell potential and stability of the soil to support the proposed facilities prior to construction.
- Review regional/local earthquake fault and seismic hazard maps to determine the potential for seismic related hazards.
- Incorporate findings of the Geotechnical Study prepared by Michelucci and Associates and existing analysis from the 2009 EIR to the extent possible into the geology and soils section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Hazards and Hazardous Materials. Development of the Proposed Project may subject people to hazardous materials or hazards. The majority of the project site has been formerly used for agricultural purposes. AES will complete the following tasks during preparation of the Hazards/Hazardous Materials section of the EIR:

- Review the relevant local and regional planning policies and ordinances related to hazards and hazardous materials within the project area, including those contained in the County's General Plan.

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Resources Conservation and Recovery Act, Hazardous and Solid Waste Management Acts, and Comprehensive Environmental Response, Compensation, and Liability Act.
- Request a database search from Environmental Data Services to identify whether the project site is listed on various local, state, or federal hazardous materials databases. AES will also search online database resources regarding facilities or sites identified as meeting the “Cortese List” requirements pursuant to Government Code Section 65962.5.
- AES will research historic land usage within and adjacent to the project site, including review of historic topographic maps and aerial photographs.
- AES will incorporate findings and existing analysis from the 2009 EIR to the extent possible into the hazards and hazardous materials section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Hydrology and Water Quality. Development of the Proposed Project would alter the existing drainage patterns on the project site during both construction and operation, potentially impacting run-off quantity and quality. AES understands that Lea and Braze have already completed an updated hydrological evaluation of the project site to assess drainage impacts associated with the development of impervious surfaces on the project site. AES will complete the following tasks during preparation of the Hydrology and Water Quality Section of the EIR:

- Review existing information concerning water quality in the project area and consider the applicability of relevant local/regional planning policies and ordinances.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including the Clean Water Act and Porter-Cologne Water Quality Act.
- Identify flood hazards on the site or in the immediate project area through Review of FEMA Flood Insurance maps, the proposed flood protection/prevention measures of the project (if needed), and determine residual effects on localized or downstream flooding.
- Peer review drainage plans, estimates of storm water volumes, and existing system capacities provided to AES by Lea and Braze during the hydrological study, the County and/or the Applicant.
- Using existing information, identify the general types and sources of water quality changes that may result from the proposed development. Evaluate potential impacts of runoff from the project site on the quality of receiving waters.
- Discuss the need to apply for an NPDES permit for construction activities. Identify guidelines and policies of the SFBRWQCB, U.S. Environmental Protection Agency, and County plans regarding water quality impacts from storm water runoff.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Hydrology and Water Quality section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Land Use and Planning. The Proposed Project would result in the subdivision of the project site for the development of 19 single-family residential units. Implementation of the Proposed Project must be

considered in light of existing policies included within the County's General Plan and General Plan Update. Additionally, the Proposed Project will introduce new land uses that may be incompatible with existing or planned land uses on adjacent properties. Based on an initial review of the General Plan and Land Use designations for the project site, the Proposed Project is consistent with the land use planning documents governing development on the project site and the density of development is consistent with zoning designations. Accordingly, AES anticipates that impacts to Land Use and Planning will be less than significant and no mitigation will be required. To ensure a complete analysis is provided, AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted land use studies associated with the project area and consider the applicability of relevant local/regional planning policies and ordinances.
- Identify existing, approved, and proposed land use and zoning designations within and surrounding the project site.
- Consider the consistency of the Proposed Project with existing applicable planning documents, and include "planning consistency matrix" as an appendix to the EIR.
- Assess potential long-term compatibility issues, as well as short-term issues associated with phased development and non-conforming land uses.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Land Use and Planning section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Noise. Development of the Proposed Project would result in a short-term increase in noise and vibration during the construction phase and would result in long-term noise increases related to traffic and operational activities that may impact sensitive receptors. AES will conduct a noise assessment of the project site and incorporate the analysis and conclusions into the Noise Section of the EIR. AES will complete the following task to determine the level of potential impacts and the need for mitigation.

- Existing Noise Levels: Conduct a detailed ambient noise survey to quantify existing noise conditions at the project site and at the nearest potentially affected noise-sensitive land uses. The survey will consist of continuous and short-term noise level measurements at as many locations deemed necessary to thoroughly identify existing noise conditions for the project area which will include traffic noise from State Route 280 and 92. To the extent that information contained in the 2009 EIR is still relevant, AES will make use of it.
- Prepare Technical Report in Support of the EIR Noise Section that will contain the results of the previous task in the above-described scope of work, as well as graphics showing noise measurement locations and potential noise mitigation locations as appropriate. The report will be included as an appendix to the EIR. AES will incorporate existing analysis from the 2009 EIR to the extent possible.

Public Services and Recreation: Development of the Proposed Project would result in an increased demand for public services and recreation, including public schools, law enforcement, and fire protection. Additionally, the increase in population as a result of the project will result in increased use of County and

regional recreational facilities. AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted studies associated with the project site and consider the applicability of relevant local/regional planning policies and ordinances..
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including:
  - Uniform Fire Code
  - California Health and Safety Code
- AES will update the public service provided questionnaires provided Appendix C of the 2009 Draft EIR. AES will contact local service providers, including the Sheriff's Department, Fire Department, County Parks Department, County Public Libraries, and School Districts to determine existing service levels in the project area and need for additional personnel, equipment, and facilities.
- Estimate the new service demands resulting from the development of the Proposed Project, including the increase in student enrollment, law enforcement demands, fire protection demands, and use of recreational facilities.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Public Services and Recreation section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Traffic and Circulation: Development of the Proposed Project would result in an increase in local traffic. AES is teaming with RKH for the preparation of a traffic analysis and study for the Proposed Project to determine the potential for adverse effects on traffic circulation and identify appropriate traffic improvements. AES will complete the following tasks during preparation of the transportation/traffic section of the EIR.

- Incorporate findings of the traffic impact analysis into the Transportation and Circulation section of the EIR.
- Assess potential impacts associated with pedestrian, bicycle, and public transportation, and recommend appropriate mitigation measures.
- Discuss potential short-term impacts associated with construction activities. It is anticipated that mitigation will likely include specific measures to be included within a Traffic Control Plan for construction activities.

Utilities and Service Systems: Development of the Proposed Project would result in an increased demand for public utilities, including potable water, wastewater treatment, drainage facilities, and solid waste services. AES is teaming with NV5, formerly Nolte and Associates to assess the potential impacts to sewer and water conveyance systems. The cost and scope assumes that the level of effort required is to update the analysis within the 2009 EIR and no modeling of conveyance capacities are required. AES will assess the potential impacts to other utility and service systems including solid waste, electricity, and telecommunications. AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted studies associated with the 2009 EIR and consider the applicability of relevant local/regional planning policies and ordinances.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: California Health and Safety Code, Integrated Waste Management Act, Water Management Planning Act, SB 610 – Water Availability Assessment. Based on the number of residential units, a Water Supply Assessment is not required under SB 610, which will be duly noted in the EIR.
- Coordinate with the County’s Public Utilities Department and local service providers to determine existing service levels in the project area.
- Estimate the new service demands resulting from the development of the Proposed Project, including water supply, wastewater, drainage and solid waste.
- Evaluate impacts to wastewater treatment and drainage facilities in light of information provided within NV5’s technical assessment.
- In accordance with thresholds provided in Appendix G of the CEQA Guidelines, evaluate physical environmental impacts resulting from proposed improvements to utility systems, including the any proposed upgrades to Crystal Springs County Special District and San Mateo Wastewater Treatment plant. This task does not include site visits to assess existing conditions of off-site improvements that may be required to update wastewater infrastructure to meet the wastewater demands of the project.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Public Services and Utilities section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

**Task 4: Draft EIR and Public Circulation.** AES will meet with the County to clarify any comments and questions raised during review of the ADEIR. AES will revise the ADEIR based on a single set of comprehensive comments provided by the County. AES will provide an electronic screen check version of the Draft EIR with track changes to the County for review prior to production. Following approval by the County, AES will facilitate preparation of the Notice of Availability (NOA) and public release of the DEIR.

AES technical staff will coordinate and attend one (1) public comment town hall meeting during the 45-day public comment period on the DEIR. AES will provide up to three (3) poster board displays for the meeting. It is assumed that the County will be responsible for reserving an appropriate venue. If desired, a court reporter will be provided by the County.

**Deliverables:** AES will provide the County with ten (10) bound hardcopies one (1) CD copy in color PDF format of the Draft EIR. Fifteen (15) CD copies of the Draft EIR with hardcopies of the Executive Summary will be submitted as required to the State Clearinghouse with the Notice of Availability. AES will provide electronic copies of the proposed poster board exhibits prior to the public town hall meeting for approval.

**Task 5: Final EIR and Mitigation Monitoring and Reporting Plan.** AES will compile comments received from the public and other interested parties during the 45-day public review period for the Draft EIR, and summarize key issues for discussion with the County. AES will meet with County staff to go over the approach for responding to key issues raised during the DEIR public review period. Following this meeting, AES will formulate responses, and make any necessary revisions to the EIR. This Scope of Work assumes a moderate level of effort will be required to respond to comments. A moderate level of effort is considered to be less than 15 comment letters and 50 individual substantive comments that require a response beyond comment noted. The Response to Comments and any refinements to the DEIR text will be incorporated into a “freestanding” Final EIR. AES will prepare a Mitigation Monitoring and Reporting Plan (MMRP) to support the County’s certification of the Final EIR. The MMRP will be referenced within the text of the Final EIR and will be included as an appendix in the final document.

**Deliverables:** AES will provide the County with a total of ten (10) bound hardcopies and one (1) CD copy in PDF format of the Final EIR.

**Task 6: Findings and Final EIR Certification Support.** AES will assist with preparation of the Findings of Fact and Statement of Overriding Considerations. AES will attend/present at one meeting with the Planning Commission, and up to two staff meetings for certification of the Final EIR and Findings and Statement of Overriding Considerations.

**Task 7: Project Management and Meetings.** The AES management team will complete the myriad of small and often unforeseen tasks required to implement the preparation of an EIR. This includes numerous phone calls and emails necessary to facilitate information exchange between the Project Team and jurisdictional agencies, as well as the time required to prepare agendas, meeting minutes, schedules, and other such documents. Under this task, AES will:

- Attend a scoping hearing;
- Participate in up to 3 (3) two-hour project coordination meetings with planning staff at the County offices for the development of the Draft EIR;
- Attend up to two (2) Planning Commission hearings; and
- Participate in up to ten (10) one-hour project related conference calls with members of the project team and jurisdictional agencies.

**Deliverables:** AES will submit monthly status reports to the Project Team via email by the fifth business day of each month. AES will prepare and distribute minutes for each project-related meeting that will outline key decisions and action items.

**Subject:** RE: TRA / Edgewood Canyon

Hi Virginia,  
You're right - I think soon I'll be pretty well versed at contracts, as I have 3 to do (TRA, Ascension, Princeton). Grace is here and she is asking if we have a log we use to assign Contract numbers. (Or do we just use the next in sequence after the last contract?) Jan said she doesn't know of a contract log.  
Thanks,  
Heather

>>> Virginia Diehl < >>> 5/13/2013 6:43 PM >>>  
Grace will give you excellent direction on the IFAS/contract process. One thing you might ask Grace, or else call the Controller's, to find out if the EDD document is still required. If it is, you'll find copies in the folder marked "Contract Forms" on the credenza in my old cubicle. Otherwise, everything is the same, except for Board contracts you also send to the Controller's a copy of the resolution along with the contract and insurance forms. And you still have James's contract to process as well. I'm sure you'll get quite well versed by the time you've finished all these.

Hi Virginia,  
The principal from TRA is coming by tomorrow to sign the contract, so Grace is also coming over to teach me how to put this into IFAS. For Princeton, which was approved last week, should I follow the exact same process? Becky just gave me the executed resolution and contract. Thanks again,  
Heather

>>> Virginia Diehl < >>> 5/9/2013 11:56 AM >>>  
You can put any date in you want, as long as it's not longer than 3 years. You should ask Dave what he would like the end date to be, to ensure he picks a date that allows for any delays--you don't want to have to do an amendment later on.

In order to pay any contract, it needs to be entered into IFAS. So you should contact Grace for assistance in creating the CR. Jan can then approve it, after which you need to create a pdf of the contract (with the CR number written in the top right corner), along with the insurance certificate and the correctly dated EDD form I already filled in. The Controller's doesn't need anything else, but the whole packet will need to be scanned and placed in the Contract Documents folder that Frances and I created to archive contract documents.

The file folder should be compiled with the log sheet on top (Jan can do this) and put in the contract file drawer. A copy of the contract needs to be sent to TRA.

Hope this helps.

Hi Virginia,

Dave H. (cc'd here) has asked for my assistance with the TRA contract. I did find the soft copy in your files, so I can change the date and circulate for signatures. I've listed a few questions:

#1 At present the date is July 1 2012 - July 30, 2013, which coincides with the fiscal year. We would of course prefer that the work start around May 15, 2013, so is it okay if I change the dates to May 15, 2013 - May 14, 2014?

#2 Do I need to create a CR in IFAS for this? (Deanna H. recommended that I work with Grace R. for these).

#3 Is there anything else that I need to do for TRA?

Thank you so much for your time.  
Heather

**Subject:** Two contracts

Hello,

Due to BoS decisions last week, I need to enter two contracts into IFAS:

#1 - \$579, 033.00 with Dyett & Bhatia for the Princeton project

#2 - \$113,075 with Analytical Environmental Services, for the Ascension Heights project

Using the Lookup function, I wasn't able to locate either of these vendors in IFAS. Am I able to create a PEID for these vendors, or do I need to work with the Controllers office?

Thank you for your help!

Heather

**Subject:** AES docs

Hi James,

I'm looking for some documents so that I can enter the Ascension Heights contract into IFAS. They include the Contract Insurance Certification Checklist, W9, County of San Mateo Contractor's Declaration Form, and their Certificate of Liability Insurance. Please let me know if you have these, or if you can point me in the direction to get them. The W9 is the most critical, since I need it to request that the Controllers set AES up as a vendor.

Thanks!

Heather

Hi Virginia,

I hope you are well. Controllers just sent out the Year End packet. Here's the first deliverable:

**May 28 - Year-End Appropriation Transfer Request (ATR)** - Begin working with CMO on year-end ATRs to finalize FY13 budget changes and to avoid budget blocks.

Do you think this applies to our department? I know that we recently got the Ascension ATR approved by the BoS on 5/7. I'm not sure if there are additional ATRs we need to complete. I asked Jan to go through the Year End deliverables with me and indicate which ones items aren't her responsibility. Jim and I are supposed to meet with Damien in DPW to discuss his group helping us with Year end, but I'm not sure if this will happen in time for 5/28. (I'm only here M-W this week, then a quick vacation, returning on Tuesday).

Thank you very much for your help and I hope you enjoy your week.

Heather

I hope you are well. Controllers just sent out the Year End packet. Here's the first deliverable:  
**May 28 - Year-End Appropriation Transfer Request (ATR)** - Begin working with CMO on year-end ATRs to finalize FY13 budget changes and to avoid budget blocks.

Do you think this applies to our department? I know that we recently got the Ascension ATR approved by the BoS on 5/7. I'm not sure if there are additional ATRs we need to complete. I asked Jan to go through the Year End deliverables with me and indicate which ones items aren't her responsibility. Jim and I are supposed to meet with Damien in DPW to discuss his group helping us with Year end, but I'm not sure if this will happen in time for 5/28. (I'm only here M-W this week, then a quick vacation, returning on Tuesday).

Thank you very much for your help and I hope you enjoy your week.  
Heather

You can put any date in you want, as long as it's not longer than 3 years. You should ask Dave what he would like the end date to be, to ensure he picks a date that allows for any delays--you don't want to have to do an amendment later on.

In order to pay any contract, it needs to be entered into IFAS. So you should contact Grace for assistance in creating the CR. Jan can then approve it, after which you need to create a pdf of the contract (with the CR number written in the top right corner), along with the insurance certificate and the correctly dated EDD form I already filled in. The Controller's doesn't need anything else, but the whole packet will need to be scanned and placed in the Contract Documents folder that Frances and I created to archive contract documents.

The file folder should be compiled with the log sheet on top (Jan can do this) and put in the contract file drawer. A copy of the contract needs to be sent to TRA.

Hope this helps.

Hi Virginia,

Dave H. (cc'd here) has asked for my assistance with the TRA contract. I did find the soft copy in your files, so I can change the date and circulate for signatures. I've listed a few questions:

#1 At present the date is July 1 2012 - July 30, 2013, which coincides with the fiscal year. We would of course prefer that the work start around May 15, 2013, so is it okay if I change the dates to May 15, 2013 - May 14, 2014?

#2 Do I need to create a CR in IFAS for this? (Deanna H. recommended that I work with Grace R. for these).

#3 Is there anything else that I need to do for TRA?

Thank you so much for your time.  
Heather

Hi Virginia,

It went great - thanks for asking. Grace will come over and work with us on some items (such as the Encumbrance Change Request and the Encumbrance Status Report). Damien will help with the Revenue Accrual JE. Damien and Mike asked if I can find last year's "Deferred Revenue Journal". They didn't know exactly what I meant by that. Would it be somewhere in a folder where I can find it?

Thanks again,  
Heather

Heather Hardy | Executive Secretary, Planning and Building Department | County of San Mateo  
| 455 County Center 2<sup>nd</sup> Floor Redwood City, CA 94063 | (650)363-1859

**AGREEMENT BETWEEN THE COUNTY OF SAN MATEO AND  
ANALYTICAL ENVIRONMENTAL SERVICES**

THIS AGREEMENT, entered into this 1st day of February, 2013, by and between the COUNTY OF SAN MATEO, hereinafter called "County," and Analytical Environmental Services, hereinafter called "Contractor."

W I T N E S S E T H:

WHEREAS, pursuant to Government Code, Section 31000, County may contract with independent contractors for the furnishing of such services to or for County or any Department thereof;

WHEREAS, it is necessary and desirable that Contractor be retained for the purpose of preparing an Environmental Impact Report for the proposed Ascensions Heights subdivision project (County File number PLN2002-00517) to be re-circulated.

**NOW, THEREFORE, IT IS HEREBY AGREED BY THE PARTIES HERETO AS FOLLOWS:**

**1. Exhibits and Attachments**

The following exhibits and attachments are included hereto and incorporated by reference herein:

Exhibit A—Services  
Exhibit B—Payments and rates  
Exhibit C—Scope of Work

**2. Services to be performed by Contractor**

In consideration of the payments set forth herein and in Exhibit "B," Contractor shall perform services for County in accordance with the terms, conditions and specifications set forth herein and in Exhibit "A."

**3. Payments**

In consideration of the services provided by Contractor in accordance with all terms, conditions and specifications set forth herein and in Exhibit "A," County shall make payment to Contractor based on the rates and in the manner specified in Exhibit "B." The County reserves the right to withhold payment if the County determines that the quantity or quality of the work performed is unacceptable. In no event shall the County's total fiscal obligation under this Agreement exceed One Hundred Thirteen Thousand Seventy-Five Dollars, \$113,075.

**4. Term and Termination**

Subject to compliance with all terms and conditions, the term of this Agreement shall be from January 31, 2013 through January 31, 2014.

This Agreement may be terminated by Contractor, the Director of Community Development or his/her designee at any time without a requirement of good cause upon thirty (30) days' written notice to the other party.

In the event of termination, all finished or unfinished documents, data, studies, maps, photographs, reports, and materials (hereafter referred to as materials) prepared by Contractor under this Agreement shall become the property of the County and shall be promptly delivered to the County. Upon termination, the Contractor may make and retain a copy of such materials. Subject to availability of funding, Contractor shall be entitled to receive payment for work/services provided prior to termination of the Agreement. Such payment shall be that portion of the full payment which is determined by comparing the work/services completed to the work/services required by the Agreement.

**5. Availability of Funds**

The County may terminate this Agreement or a portion of the services referenced in the Attachments and Exhibits based upon unavailability of Federal, State, or County funds, by providing written notice to Contractor as soon as is reasonably possible after the County learns of said unavailability of outside funding.

**6. Relationship of Parties**

Contractor agrees and understands that the work/services performed under this Agreement are performed as an independent Contractor and not as an employee of the County and that Contractor acquires none of the rights, privileges, powers, or advantages of County employees.

**7. Hold Harmless**

Contractor shall indemnify and save harmless County, its officers, agents, employees, and servants from all claims, suits, or actions of every name, kind, and description, brought for, or on account of: (A) injuries to or death of any person, including Contractor, or (B) damage to any property of any kind whatsoever and to whomsoever belonging, (C) any sanctions, penalties, or claims of damages resulting from Contractor's failure to comply with the requirements set forth in the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and all Federal regulations promulgated thereunder, as amended, or (D) any other loss or cost, including but not limited to that caused by the concurrent active or passive negligence of County, its officers, agents, employees, or servants, resulting from the performance of any work required of Contractor or payments made pursuant to this Agreement, provided that this shall not apply to injuries or damage for which County has been found in a court of competent jurisdiction to be solely liable by reason of its own negligence or willful misconduct.

The duty of Contractor to indemnify and save harmless as set forth herein, shall include the duty to defend as set forth in Section 2778 of the California Civil Code.

**8. Assignability and Subcontracting**

Contractor shall not assign this Agreement or any portion thereof to a third party or subcontract with a third party to provide services required by contractor under this Agreement without the prior written consent of County. Any such assignment or subcontract without the County's prior written consent shall give County the right to automatically and immediately terminate this Agreement.

**9. Insurance**

The Contractor shall not commence work or be required to commence work under this Agreement unless and until all insurance required under this paragraph has been obtained and such insurance has been approved by Risk Management, and Contractor shall use diligence to obtain such insurance and to obtain such approval. The Contractor shall furnish the County with certificates of insurance evidencing the required coverage, and there shall be a specific contractual liability endorsement extending the Contractor's coverage to include the contractual liability assumed by the Contractor pursuant to this Agreement. These certificates shall specify or be endorsed to provide that thirty (30) days' notice must be given, in writing, to the County of any pending change in the limits of liability or of any cancellation or modification of the policy.

- (1) **Worker's Compensation and Employer's Liability Insurance** The Contractor shall have in effect during the entire life of this Agreement Workers' Compensation and Employer's Liability Insurance providing full statutory coverage. In signing this Agreement, the Contractor certifies, as required by Section 1861 of the California Labor Code, that it is aware of the provisions of Section 3700 of the California Labor Code which requires every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of the Code, and will comply with such provisions before commencing the performance of the work of this Agreement.
  
- (2) **Liability Insurance** The Contractor shall take out and maintain during the life of this Agreement such Bodily Injury Liability and Property Damage Liability Insurance as shall protect him/her while performing work covered by this Agreement from any and all claims for damages for bodily injury, including accidental death, as well as any and all claims for property damage which may arise from contractors operations under this Agreement, whether such operations be by himself/herself or by any sub-contractor or by anyone directly or indirectly employed by either of them. Such insurance shall be combined single limit bodily injury and property damage for each occurrence and shall be not less than the amount specified below.

Such insurance shall include:

(a) Comprehensive General Liability . . . . .	\$1,000,000
(b) Motor Vehicle Liability Insurance . . . . .	\$1,000,000
(c) Professional Liability . . . . .	\$1,000,000

County and its officers, agents, employees and servants shall be named as additional insured on any such policies of insurance, which shall also contain a provision that the insurance afforded thereby to the County, its officers, agents, employees and servants shall be primary insurance to the full limits of liability of the policy, and that if the County or its officers and employees have other insurance against the loss covered by such a policy, such other insurance shall be excess insurance only.

In the event of the breach of any provision of this section, or in the event any notice is received which indicates any required insurance coverage will be diminished or canceled, the County of San Mateo at its option, may, notwithstanding any other provision of this Agreement to the contrary, immediately declare a material breach of this Agreement and suspend all further work pursuant to this Agreement.

**10. Compliance with laws; payment of Permits/Licenses**

All services to be performed by Contractor pursuant to this Agreement shall be performed in accordance with all applicable Federal, State, County, and municipal laws, ordinances and regulations, including, but not limited to, the Health Insurance Portability and Accountability Act of 1996 (HIPAA), and the Federal Regulations promulgated thereunder, as amended, and will comply with the Business Associate requirements set forth in Attachment "H," and the Americans with Disabilities Act of 1990, as amended, and Section 504 of the Rehabilitation Act of 1973, as amended and attached hereto and incorporated by reference herein as Attachment "I," which prohibits discrimination on the basis of handicap in programs and activities receiving any Federal or County financial assistance. Such services shall also be performed in accordance with all applicable ordinances and regulations, including, but not limited to, appropriate licensure, certification regulations, provisions pertaining to confidentiality of records, and applicable quality assurance regulations. In the event of a conflict between the terms of this Agreement and State, Federal, County, or municipal law or regulations, the requirements of the applicable law will take precedence over the requirements set forth in this Agreement. Further, Contractor certifies that the Contractor and all of its subcontractors will adhere to all applicable provisions of Chapter 4.106 of the San Mateo County Ordinance Code, which regulates the use of disposable food service ware.

Contractor will timely and accurately complete, sign, and submit all necessary documentation of compliance.

**11. Non-Discrimination and Other Requirements**

- A. *Section 504 applies only to Contractors who are providing services to members of the public.* Contractor shall comply with § 504 of the Rehabilitation Act of 1973, which provides that no otherwise qualified handicapped individual shall, solely by reason of a disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination in the performance of this Agreement.
- B. *General non-discrimination.* No person shall, on the grounds of race, color, religion, ancestry, gender, age (over 40), national origin, medical condition (cancer), physical or mental disability, sexual orientation, pregnancy, childbirth or related medical condition, marital status, or political affiliation be denied any benefits or subject to discrimination under this Agreement.

- C. *Equal employment opportunity.* Contractor shall ensure equal employment opportunity based on objective standards of recruitment, classification, selection, promotion, compensation, performance evaluation, and management relations for all employees under this Agreement. Contractor's equal employment policies shall be made available to County of San Mateo upon request.
- D. *Violation of Non-discrimination provisions.* Violation of the non-discrimination provisions of this Agreement shall be considered a breach of this Agreement and subject the Contractor to penalties, to be determined by the County Manager, including but not limited to
  - i) termination of this Agreement;
  - ii) disqualification of the Contractor from bidding on or being awarded a County contract for a period of up to 3 years;
  - iii) liquidated damages of \$2,500 per violation;
  - iv) imposition of other appropriate contractual and civil remedies and sanctions, as determined by the County Manager.

To effectuate the provisions of this section, the County Manager shall have the authority to examine Contractor's employment records with respect to compliance with this paragraph and/or to set off all or any portion of the amount described in this paragraph against amounts due to Contractor under the Contract or any other Contract between Contractor and County.

Contractor shall report to the County Manager the filing by any person in any court of any complaint of discrimination or the filing by any person of any and all charges with the Equal Employment Opportunity Commission, the Fair Employment and Housing Commission or any other entity charged with the investigation of allegations within 30 days of such filing, provided that within such 30 days such entity has not notified Contractor that such charges are dismissed or otherwise unfounded. Such notification shall include the name of the complainant, a copy of such complaint, and a description of the circumstance. Contractor shall provide County with a copy of their response to the Complaint when filed.

- E. *Compliance with Equal Benefits Ordinance.* With respect to the provision of employee benefits, Contractor shall comply with the County Ordinance which prohibits contractors from discriminating in the provision of employee benefits between an employee with a domestic partner and an employee with a spouse.
- F. The Contractor shall comply fully with the non-discrimination requirements required by 41 CFR 60-741.5(a), which is incorporated herein as if fully set forth.

## **12. Compliance with Contractor Employee Jury Service Ordinance**

Contractor shall comply with the County Ordinance with respect to provision of jury duty pay to employees and have and adhere to a written policy that provides that its employees shall receive from the Contractor, on an annual basis, no less than five days of regular pay for actual jury service in San Mateo County. The policy may provide that employees deposit any fees received for such jury service with the Contractor or that the Contractor deduct from the employees' regular pay the fees received for jury service.

**13. Retention of Records, Right to Monitor and Audit**

(a) CONTRACTOR shall maintain all required records for three (3) years after the COUNTY makes final payment and all other pending matters are closed, and shall be subject to the examination and/or audit of the County, a Federal grantor agency, and the State of California.

(b) Reporting and Record Keeping: CONTRACTOR shall comply with all program and fiscal reporting requirements set forth by appropriate Federal, State and local agencies, and as required by the COUNTY.

(c) CONTRACTOR agrees to provide to COUNTY, to any Federal or State department having monitoring or review authority, to COUNTY's authorized representatives, and/or their appropriate audit agencies upon reasonable notice, access to and the right to examine all records and documents necessary to determine compliance with relevant Federal, State, and local statutes, rules and regulations, and this Agreement, and to evaluate the quality, appropriateness and timeliness of services performed.

**14. Merger Clause**

This Agreement, including the Exhibits attached hereto and incorporated herein by reference, constitutes the sole Agreement of the parties hereto and correctly states the rights, duties, and obligations of each party as of this document's date. In the event that any term, condition, provision, requirement or specification set forth in this body of the agreement conflicts with or is inconsistent with any term, condition, provision, requirement or specification in any exhibit and/or attachment to this agreement, the provisions of this body of the agreement shall prevail. Any prior agreement, promises, negotiations, or representations between the parties not expressly stated in this document are not binding. All subsequent modifications shall be in writing and signed by the parties.

**15. Controlling Law and Venue**

The validity of this Agreement and of its terms or provisions, as well as the rights and duties of the parties hereunder, the interpretation, and performance of this Agreement shall be governed by the laws of the State of California. Any dispute arising out of this Agreement shall be venued either in the San Mateo County Superior Court or in the United States District Court for the Northern District of California.

**16. Notices**

Any notice, request, demand, or other communication required or permitted hereunder shall be deemed to be properly given when both (1) transmitted via facsimile to the telephone number listed below and (2) either deposited in the United State mail, postage prepaid, or when deposited for overnight delivery with an established overnight courier that provides a tracking number showing confirmation of receipt, for transmittal, charges prepaid, addressed to:

**In the case of County, to:**  
Director of Community Development  
Planning & Building Department  
455 County Center, Mail Drop PLN122  
Redwood City, CA 94063

**In the case of Contractor, to:**  
Analytical Environmental Services  
1801 7<sup>th</sup> Street, Ste 100  
Sacramento, CA 95811

In the event that the facsimile transmission is not possible, notice shall be given both by United States mail and an overnight courier as outlined above.

IN WITNESS WHEREOF, the parties hereto, by their duly authorized representatives, have affixed their hands.

COUNTY OF SAN MATEO

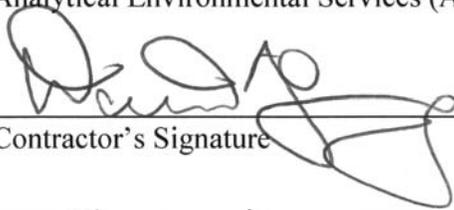

By: \_\_\_\_\_  
President, Board of Supervisors, San Mateo County

Date: \_\_\_\_\_

ATTEST:

By: \_\_\_\_\_  
Clerk of Said Board

Analytical Environmental Services (AES)

  
\_\_\_\_\_  
Contractor's Signature

Date: 12-11-12

Exhibit "A"

In consideration of the payments set forth in Exhibit "B", Contractor shall provide the following services:

Contractor shall complete the preparation of an Environmental Impact Report for the proposed Ascensions Heights project (County File number PLN2002-00517) to be re-circulated. A complete Scope of Work is included in Exhibit C.

Exhibit "B"

In consideration of the services provided by Contractor in Exhibit "A", County shall pay Contractor based on the following fee schedule:

# EXHIBIT B - SCHEDULE OF CHARGES

AES schedule of hourly wage rates for the listing the labor categories, associated wage rates, and reimbursable expenses have been provided below.

Employee Category	Hourly Billing Rate
Principal	\$245
<b>Project Manager</b>	<b>\$140</b>
Analyst III	\$120
<b>Analyst II</b>	<b>\$110</b>
<b>Analyst I</b>	<b>\$105</b>
Cultural Resources Specialist	\$120
<b>Archaeologist III</b>	<b>\$110</b>
Archaeologist II	\$105
Archaeologist I	\$100
<b>Biologist III</b>	<b>\$120</b>
Biologist II	\$110
Biologist I	\$105
Sr. Graphic Designer	\$105
<b>Graphic Designer II</b>	<b>\$100</b>
Graphic Designer I	\$95
Office Administrator	\$100
Administrative Assistant III	\$90
Administrative Assistant II	\$85
<b>Administrative Assistant I</b>	<b>\$80</b>

Direct Costs	
Postage/Overnight Mail	Actual cost + 15%
Courier Charges	Actual cost + 15%
Mileage	Federal Rate - currently \$0.55 per mile + 15%
Other Direct Costs	Actual cost + 15%
In-house Copying Charges:	
Black & White	\$0.10 per page + 15%
Color	\$1 per page + 15%
CD duplication w/label & case	\$2.50 each + 15%

# EXHIBIT C - SCOPE OF WORK

## Project Understanding

The **Ascension Heights Subdivision Project (Proposed Project)** entails a request by the project proponent for the County of San Mateo to approve subdivision of six parcels on 21.13 acres into 21 lots for development of 19 single-family residences with the remaining 2 lots (approximately 7.81-acres) maintained as a conservation area. The project site is located adjacent to Ascension Drive and Bel Aire Road in unincorporated San Mateo County, approximately 0.87 miles north east of Highway 280 and 0.51 miles west of highway 92. Potable water would be provided by connection to the Mid-Peninsula Water District and wastewater collection would be provided by the Crystal Springs Sanitation District with treatment at the City of San Mateo Wastewater Treatment Plant. Development of the 19 subdivided lot into single-family residences would require 40,920 cubic yards of grading, of which 28,270 cubic yards would require exportation from the site. Accordingly, the project applicant also requires a grading permit from the County. Based on the size of the development, a Water Supply Assessment is not required for the Proposed Project. One significant consideration is the Cease and Desist Order (CDO) issued by the San Francisco Bay Regional Water Quality Control Board to the City of San Mateo, town of Hillsborough, and Crystal Springs County Sanitation District. The CDO was issued as a result of high infiltration rates of non wastewater during wet weather into the wastewater conveyance system resulting in associated decreases in sewage conveyance capacity which lead to unregulated releases of wastewater to surface waters. This issue will be addressed in the Draft EIR.

The Proposed Project is a re-design of a previous project that was denied by the San Mateo County Planning Commission in 2009. A Draft Environmental Impact Report (Draft EIR) and Final Environmental Impact Report (Final EIR) were prepared for the previously proposed project. The scope of services will utilize, to the extent feasible, existing information from the previous environmental process to provide a Revised EIR that meets the current CEQA guidelines as well as current legal precedent for the analysis of environmental impacts developed through CEQA case law.

## Scope of Services

### *Program Description*

The overall objective and focus of the work plan outlined below is the efficient preparation of a Revised EIR that meets the legal requirements of a complete, adequate, and objective statement of the Proposed Project's environmental consequences while incorporating background information and analysis prepared during the previous EIR process to the extent feasible and reasonable in a cost effective manner. The resulting Revised EIR document will provide a concise, integrated source of information for the public, county decision makers, and other permitting agencies including the California Department of Fish and Game, U.S. Army Corps of Engineers, and the Regional Water Quality Control Board.

## *County Direction*

AES works as an extension of County staff. Our Project Manager would take direction from the assigned County Project Manager. In this role, AES will pro-actively assist with meeting the stated project objectives by maintaining an up-to-date schedule that indicates deliverable due dates and responsible parties. AES has enjoyed similar working relationships with a variety of federal, state, and municipal agencies.

## *Proposed Course of Action*

**Task 1: Kick-Off Meeting, Project Initiation and Information Review.** AES will meet with the County to establish lines of communication, determine the nature and format of the document to be prepared, and obtain relevant documentation and project details. Following this meeting, AES will review all project documentation and related planning materials, including the additional information for the previous EIR that may not have been provided during development of this Scope of Work, and available planning documents including General Plan materials, utility master plans, the County's subdivision regulations, tree regulations, and the Countywide Transportation Plan. Following this review, AES will develop a final project schedule and work plan that meets the needs of the County.

**Deliverables:** AES will prepare a final work plan and schedule to be distributed to the project team via email within five (5) days of the project initiation meeting.

**Task 2: Initial Study, NOP and Scoping.** Following the project initiation meeting, AES will prepare a draft Initial Study (IS) that includes a checklist consistent with Appendix G of the CEQA Guidelines and County guidance. The IS will be used to screen nonsignificant environmental issues from further consideration within the EIR. Following completion of the IS, AES will prepare a Notice of Preparation (NOP). Flexibility will be built into the NOP in anticipation of minor adjustments to project layout and design. This Scope of Work assumes that the County will coordinate circulation of the IS/NOP to the public. AES's Sacramento Office is located mere blocks from the State Clearinghouse and can readily deliver the IS/NOP in a cost effective manner. AES will attend and provide environmental expertise at one public town hall/scoping meeting during the 30-day public review period starting with release of the NOP. It is assumed that the County will be responsible for reserving an appropriate venue for the meeting. AES shall prepare up to 4 poster board exhibits for the public town hall/scoping meeting.

**Deliverables:** AES will provide the County with an electronic version of the IS. AES will revise the IS based on a comprehensive set of comments received on the electronic version from the County. The IS will be included as an appendix to the Administrative Draft EIR. AES will provide an electronic copy of the draft NOP to the County for review. AES will revise the NOP based on a comprehensive set of comments received on the electronic version from the County. AES will provide electronic copies of the proposed poster board exhibits prior to the public town hall/scoping meeting for approval.

**Task 3: Administrative Draft Revised EIR Preparation.** AES will conduct field studies and analysis as necessary to prepare an Administrative Draft EIR (ADEIR) in accordance with the State CEQA Guidelines, and relevant case law. AES will review the results of the IS and scoping comments submitted during the NOP comment period to focus the EIR analysis on those issues that are identified as potentially significant. AES will prepare a summary list of relevant issues to be addressed within the project analysis and consult with the County regarding any revisions to the scope of EIR services, if necessary. Given the nature of the Proposed Project, AES anticipates the EIR will be rather comprehensive, with sections analyzing the direct, indirect, and cumulative effects associated with each of the following issue areas:

- Aesthetics
- Agricultural Resources
- Air Quality and Greenhouse Gases
- Biological Resources
- Cultural Resources
- Geology and Soils
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population and Housing
- Public Services
- Recreation
- Utilities and Service Systems
- Transportation and Traffic

As Lead Agency, the County will make the final determination regarding the content of the EIR. Upon award of the contract, AES and the County would consider each issue area and draft a more detailed work plan that clearly outlines the expectations of the County and the obligations of AES.

**Deliverables:** AES will provide the County with a total of three (3) bound hardcopies and one (1) CD copy in color PDF format of the ADEIR.

### ***ADEIR Contents***

Executive Summary. This section will provide an overview of the Draft EIR (DEIR) and include a summary table of all identified environmental effects, mitigation, and the significance level of impacts before and after mitigation.

Introduction. This section will explain the applicability of CEQA to the Proposed Project, describes the CEQA public review process, summarizes significant issues raised during the scoping process, and outlines the organization of the EIR.

Project Description. This section will present the background of the Proposed Project and identify the County's objectives in pursuing the project. AES will incorporate detailed project information and exhibits provided by the Applicant and County to describe each component of the Proposed Project in sufficient detail to enable identification of the largest envelope of potential environmental impacts. All anticipated approvals, permits, and other actions that will rely on the EIR will be identified.

Environmental Setting and Analysis. Considered the heart of the EIR, this section will provide a separate subsection for each environmental issue area in which a potentially significant impact was identified during the IS and scoping process. Each issue area subsection will discuss the existing setting, regulatory framework, analysis methods and thresholds, anticipated project-related impacts, and recommended mitigation measures to reduce or avoid adverse effects.

Cumulative Impacts. AES will assess the cumulative impacts of the Proposed Project in connection with other reasonably foreseeable projects and build-out of the County's General Plan. If available, the cumulative analysis will also consider growth projections anticipated in the County's on-going General Plan Update. AES will work with the County and relevant agencies to develop a list of relevant projects and define the geographical scope of the cumulative analysis. Cumulative analysis will cover each issue area addressed under the Environmental Setting and Analysis section of the EIR. Anticipated project-related cumulative impacts will be identified and mitigation measures will be recommended to reduce or avoid adverse effects.

Project Alternatives. In accordance with CEQA Guidelines Section 15126.6, AES will work with the County and Applicant to develop up to four (4) alternatives that could feasibly attain most of the basic objectives of the Proposed Project and would substantially lessen one or more of the project's significant environmental effects. The following alternatives may be considered as part of this process, although it is anticipated that one or more may be eliminated from detailed consideration due to the increased potential for environmental impacts:

1. No Project Alternative. As required by CEQA, one of the alternatives will be a No Project Alternative. This alternative will assume that the Proposed Project would not occur. While it is anticipated that some environmental impacts would be reduced, the basic objectives of the project would not be accomplished and may result in greater effects associated with water quality and noncompliance with permit requirements.
2. Reduced Footprint Alternative. AES will work with the County to identify a mitigated project footprint alternative within the boundaries of the project site. It is anticipated that a reconfiguration of land uses and clustering of high density residential development would accomplish the goals of this alternative.
3. Reduced Density Alternative. AES will work with the County to define a reduced density alternative that would result in fewer residents on the project site, and thus fewer demands on public utilities and infrastructure.

According to CEQA Guidelines Section 15126.6(d), “the significant effects of an alternative shall be discussed, but in less detail than the significant effects of the project as proposed.” The assessment of project alternatives will be consistent with this requirement by presenting a sufficient amount of detail necessary to afford decision makers with a reasoned choice. In most cases, environmental analyses conducted for the Proposed Project will be applicable to alternative development scenarios. Qualitative analysis of air quality and noise impacts associated with project alternatives will be conducted.

### *Issue Area Analysis and Assumptions*

Aesthetics. Development of the Proposed Project would alter the visual character of the project site from open space to urban; however, the surrounding areas consist of housing developments of similar density and therefore impacts are anticipated to be less than significant. Using visual representations of the project to be provided by the Applicant and existing analysis from the 2009 EIR to the extent possible, AES will complete the following tasks to determine the level of potential impacts and the need for mitigation:

- Review the relevant visual quality standards contained in the County’s General Plan and consider the applicability of planning policies and ordinances related to aesthetics.
- Conduct reconnaissance field studies to assess the visual character of the project site and surrounding public view areas. Document existing visual conditions on the project site through photographs and detailed descriptions.
- Incorporate the existing three dimensional visual design exhibits of the proposed facilities prepared by Lea and Braze Engineering, Inc. for the Applicant into site and aerial photographs of the project site to assess impacts to aesthetics and viewsheds of the project region.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the aesthetics section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts and ensure consistency with relevant visual quality standards of the County’s General Plan.

Air Quality. Development of the Proposed Project would result in short-term emissions and fugitive dust during the construction phase and long-term emissions associated with vehicle traffic. AES will complete the following tasks to determine the level of potential air quality impacts and the need for mitigation.

- Review relevant local/regional air quality standards for the project area, including those issued by the Bay Area Air Quality Management District (AQMD) and California Air Resources Board (CARB).
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including the Federal Clean Air Act and California Clean Air Act.
- Document existing sources of air pollution and identify sensitive receptors that may be affected by development of the Proposed Project.
- AES will conduct a HRA for the Proposed Project. The assessment will use accepted County or Air District protocols to determine the necessity for dispersion modeling. AES will use either AeMOD

or CAL3QHCR modeling software to estimate concentrations at defined receptor locations and will consult with the Air District and County to determine the appropriate level of analysis.

- Identify short-term air quality impacts from construction emissions using CARB-approved URBEMIS- modeling software. In order to estimate construction emissions, AES will coordinate with the County and Applicant to acquire information regarding the nature of construction activities, types of equipment that will likely be used, and the anticipated total area of disturbance.
- Identify long-term regional air quality impacts from mobile and area source emissions using CARB approved URBEMIS modeling software. This analysis will include quantification of criteria air pollutants identified in the local air quality management plans and shall be conducted according to district methodologies. Mobile source emissions will be estimated using vehicle trip generation and distribution information provided in the traffic study prepared by RKH.
- Quantify greenhouse gas emissions as recommended within the recent amendments to the CEQA Guidelines. In accordance with this guidance, AES will provide a qualitative, performance based approach to reducing impacts. This effort will be closely coordinated within the County's General Plan Update Process to ensure consistent methodology and thresholds are being applied.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the air quality section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts from both construction and operation of the Proposed Project. Modeling runs will be included as an appendix to the EIR.

Agricultural Resources. The Proposed Project would not result in the conversion of prime agricultural land. Additionally, no Williamson Act contracts are held on the subject parcels. AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process. Should it be determined that Agricultural Resources should be included within the EIR, AES will complete the following tasks using the existing analysis from the 2009 EIR to the extent possible to determine the level of potential impacts to agricultural resources and the need for mitigation:

- Review the relevant local policies concerning the protection of farmlands, including those contained in the County General Plan and General Plan Update.
- Describe and map the important agricultural soils in the project area including Prime Farmland, Farmland of Statewide Importance and Unique Farmland.
- Review information on existing agricultural resource in the region and current urbanization trends.
- AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process.

Biological Resources. Development of the Proposed Project has the potential to impact special-status species and other biological resources, including the endangered Mission Blue Butterfly. This scope of work does not provide for protocol-level biological surveys or permitting. AES will complete the following tasks to determine the level of potential biological impacts and the need for mitigation:

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Federal Endangered Species Act, Fish and Wildlife Coordination Act, Migratory Bird Treaty Act, Clean Water Act (Sections 401 and 404), Magnuson Fisheries-Stevens Fishery

Conservation and Management Act, California Endangered Species Act, California Fish and Game Code, and Porter-Cologne Water Quality Control Act.

- Review existing information related to biological resources included within the Biological Resources Assessment prepared for the 2009 EIR.
- Conduct an updated query of the California Natural Diversity Database/RareFind, California Native Plant Society's Electronic Inventory, and the California Wildlife-Habitat Relationships database, and obtain current special-status species lists for the project area from the U.S. Fish and Wildlife Service (USFWS).
- Conduct a biological field survey of the project site to establish the potential for occurrences of special-status species or critical habitat and confirm the findings of the Biological Resources Assessment prepared by the Applicant.
- Incorporate information from existing studies and findings into the biological resources section of the EIR and recommend avoidance or mitigation measures to reduce any potentially significant impacts. In coordination with the County, AES will informally consult with USFWS and the California Department of Fish and Game to refine mitigation measures and meet regulatory requirements. This coordination will promote an efficient environmental review process for the Proposed Project.

Cultural Resources. Development of the Proposed Project could result in adverse impacts to previously documented, newly identified, or inadvertently discovered cultural resources. Preliminary site reconnaissance indicates that the project site has been substantially disturbed from agricultural activities; however, impacts to unanticipated archaeological resources discovered during construction are always a possibility. AES will complete the following tasks during preparation of the cultural resources section of the EIR.

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: CEQA Guidelines 15064.5 and PRC 21083.2, SB-18 – Tribal Consultation (required for General Plan Amendment), Section 106 of the National Historic Preservation Act (required for 404 permits)
- Conduct an updated records search at the Northwest Information Center of the California Historical Resources Information System.
- Request a sacred lands search and stakeholders list from the Native American Heritage Commission (NAHC). AES will send preliminary consultation letters to all Native American stakeholders identified by the NAHC.
- Conduct an intensive Phase-I pedestrian survey of the project site. The survey will include recordation of any newly identified sites on appropriate DPR forms. Records of previously identified sites will be updated if necessary. This scope of work assumes that no more than two relatively simple resources will require recordation or updating. Evaluation of site significance is not included in the enclosed cost estimate. If it is determined that identified site(s) need to be evaluated, AES will provide a detailed scope of work and cost estimate for this work.

- Assist the County with SB-18 consultation. SB-18 assistance will include identification of stakeholders, provision of invitation to consult language, and attendance at up to two meetings with tribal representatives.
- Conduct all surveys and records searches in compliance with Section 106 of National Historic Preservation Act in the event that federal permitting is required.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the cultural resources section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts. This Scope of Work does not provide for testing or data recovery of any identified archaeological sites.

Geology and Soils. Development of the Proposed Project has the potential to result in soil erosion or subject people or property to geologic or seismic risks. AES is teaming with Michelucci and Associates to conduct an Updated Geotechnical Study to supplement the geotechnical study they prepared for the 2009 EIR. AES will complete the following tasks during preparation of the geology and soils section of the EIR:

- Review the relevant local and regional planning policies and ordinances related to geology, soils and seismic hazards within the project area, including those contained in the County's General Plan.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Soil and Water Conservation Act, National Earthquake Hazards Reduction Program, Alquist-Priolo Earthquake Fault Zoning Act, Seismic Hazards Mapping Act, and California Building Standards Code.
- Identify soils types within the project area based on a review of U.S. Department of Agriculture soils surveys and field investigations to estimate the potential for erosion, settlement, and liquefaction; however, it is assumed that a geotechnical report or other appropriate analysis shall be conducted that determines the shrink/swell potential and stability of the soil to support the proposed facilities prior to construction.
- Review regional/local earthquake fault and seismic hazard maps to determine the potential for seismic related hazards.
- Incorporate findings of the Geotechnical Study prepared by Michelucci and Associates and existing analysis from the 2009 EIR to the extent possible into the geology and soils section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Hazards and Hazardous Materials. Development of the Proposed Project may subject people to hazardous materials or hazards. The majority of the project site has been formerly used for agricultural purposes. AES will complete the following tasks during preparation of the Hazards/Hazardous Materials section of the EIR:

- Review the relevant local and regional planning policies and ordinances related to hazards and hazardous materials within the project area, including those contained in the County's General Plan.

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Resources Conservation and Recovery Act, Hazardous and Solid Waste Management Acts, and Comprehensive Environmental Response, Compensation, and Liability Act.
- Request a database search from Environmental Data Services to identify whether the project site is listed on various local, state, or federal hazardous materials databases. AES will also search online database resources regarding facilities or sites identified as meeting the “Cortese List” requirements pursuant to Government Code Section 65962.5.
- AES will research historic land usage within and adjacent to the project site, including review of historic topographic maps and aerial photographs.
- AES will incorporate findings and existing analysis from the 2009 EIR to the extent possible into the hazards and hazardous materials section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Hydrology and Water Quality. Development of the Proposed Project would alter the existing drainage patterns on the project site during both construction and operation, potentially impacting run-off quantity and quality. AES understands that Lea and Braze have already completed an updated hydrological evaluation of the project site to assess drainage impacts associated with the development of impervious surfaces on the project site. AES will complete the following tasks during preparation of the Hydrology and Water Quality Section of the EIR:

- Review existing information concerning water quality in the project area and consider the applicability of relevant local/regional planning policies and ordinances.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including the Clean Water Act and Porter-Cologne Water Quality Act.
- Identify flood hazards on the site or in the immediate project area through Review of FEMA Flood Insurance maps, the proposed flood protection/prevention measures of the project (if needed), and determine residual effects on localized or downstream flooding.
- Peer review drainage plans, estimates of storm water volumes, and existing system capacities provided to AES by Lea and Braze during the hydrological study, the County and/or the Applicant.
- Using existing information, identify the general types and sources of water quality changes that may result from the proposed development. Evaluate potential impacts of runoff from the project site on the quality of receiving waters.
- Discuss the need to apply for an NPDES permit for construction activities. Identify guidelines and policies of the SFBRWQCB, U.S. Environmental Protection Agency, and County plans regarding water quality impacts from storm water runoff.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Hydrology and Water Quality section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Land Use and Planning. The Proposed Project would result in the subdivision of the project site for the development of 19 single-family residential units. Implementation of the Proposed Project must be

considered in light of existing policies included within the County's General Plan and General Plan Update. Additionally, the Proposed Project will introduce new land uses that may be incompatible with existing or planned land uses on adjacent properties. Based on an initial review of the General Plan and Land Use designations for the project site, the Proposed Project is consistent with the land use planning documents governing development on the project site and the density of development is consistent with zoning designations. Accordingly, AES anticipates that impacts to Land Use and Planning will be less than significant and no mitigation will be required. To ensure a complete analysis is provided, AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted land use studies associated with the project area and consider the applicability of relevant local/regional planning policies and ordinances.
- Identify existing, approved, and proposed land use and zoning designations within and surrounding the project site.
- Consider the consistency of the Proposed Project with existing applicable planning documents, and include "planning consistency matrix" as an appendix to the EIR.
- Assess potential long-term compatibility issues, as well as short-term issues associated with phased development and non-conforming land uses.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Land Use and Planning section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Noise. Development of the Proposed Project would result in a short-term increase in noise and vibration during the construction phase and would result in long-term noise increases related to traffic and operational activities that may impact sensitive receptors. AES will conduct a noise assessment of the project site and incorporate the analysis and conclusions into the Noise Section of the EIR. AES will complete the following task to determine the level of potential impacts and the need for mitigation.

- Existing Noise Levels: Conduct a detailed ambient noise survey to quantify existing noise conditions at the project site and at the nearest potentially affected noise-sensitive land uses. The survey will consist of continuous and short-term noise level measurements at as many locations deemed necessary to thoroughly identify existing noise conditions for the project area which will include traffic noise from State Route 280 and 92. To the extent that information contained in the 2009 EIR is still relevant, AES will make use of it.
- Prepare Technical Report in Support of the EIR Noise Section that will contain the results of the previous task in the above-described scope of work, as well as graphics showing noise measurement locations and potential noise mitigation locations as appropriate. The report will be included as an appendix to the EIR. AES will incorporate existing analysis from the 2009 EIR to the extent possible.

Public Services and Recreation: Development of the Proposed Project would result in an increased demand for public services and recreation, including public schools, law enforcement, and fire protection. Additionally, the increase in population as a result of the project will result in increased use of County and

regional recreational facilities. AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted studies associated with the project site and consider the applicability of relevant local/regional planning policies and ordinances..
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including:
  - Uniform Fire Code
  - California Health and Safety Code
- AES will update the public service provided questionnaires provided Appendix C of the 2009 Draft EIR. AES will contact local service providers, including the Sheriff's Department, Fire Department, County Parks Department, County Public Libraries, and School Districts to determine existing service levels in the project area and need for additional personnel, equipment, and facilities.
- Estimate the new service demands resulting from the development of the Proposed Project, including the increase in student enrollment, law enforcement demands, fire protection demands, and use of recreational facilities.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Public Services and Recreation section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Traffic and Circulation: Development of the Proposed Project would result in an increase in local traffic. AES is teaming with RKH for the preparation of a traffic analysis and study for the Proposed Project to determine the potential for adverse effects on traffic circulation and identify appropriate traffic improvements. AES will complete the following tasks during preparation of the transportation/traffic section of the EIR.

- Incorporate findings of the traffic impact analysis into the Transportation and Circulation section of the EIR.
- Assess potential impacts associated with pedestrian, bicycle, and public transportation, and recommend appropriate mitigation measures.
- Discuss potential short-term impacts associated with construction activities. It is anticipated that mitigation will likely include specific measures to be included within a Traffic Control Plan for construction activities.

Utilities and Service Systems: Development of the Proposed Project would result in an increased demand for public utilities, including potable water, wastewater treatment, drainage facilities, and solid waste services. AES is teaming with NV5, formerly Nolte and Associates to assess the potential impacts to sewer and water conveyance systems. The cost and scope assumes that the level of effort required is to update the analysis within the 2009 EIR and no modeling of conveyance capacities are required. AES will assess the potential impacts to other utility and service systems including solid waste, electricity, and telecommunications. AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted studies associated with the 2009 EIR and consider the applicability of relevant local/regional planning policies and ordinances.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: California Health and Safety Code, Integrated Waste Management Act, Water Management Planning Act, SB 610 – Water Availability Assessment. Based on the number of residential units, a Water Supply Assessment is not required under SB 610, which will be duly noted in the EIR.
- Coordinate with the County’s Public Utilities Department and local service providers to determine existing service levels in the project area.
- Estimate the new service demands resulting from the development of the Proposed Project, including water supply, wastewater, drainage and solid waste.
- Evaluate impacts to wastewater treatment and drainage facilities in light of information provided within NV5’s technical assessment.
- In accordance with thresholds provided in Appendix G of the CEQA Guidelines, evaluate physical environmental impacts resulting from proposed improvements to utility systems, including the any proposed upgrades to Crystal Springs County Special District and San Mateo Wastewater Treatment plant. This task does not include site visits to assess existing conditions of off-site improvements that may be required to update wastewater infrastructure to meet the wastewater demands of the project.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Public Services and Utilities section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

**Task 4: Draft EIR and Public Circulation.** AES will meet with the County to clarify any comments and questions raised during review of the ADEIR. AES will revise the ADEIR based on a single set of comprehensive comments provided by the County. AES will provide an electronic screen check version of the Draft EIR with track changes to the County for review prior to production. Following approval by the County, AES will facilitate preparation of the Notice of Availability (NOA) and public release of the DEIR.

AES technical staff will coordinate and attend one (1) public comment town hall meeting during the 45-day public comment period on the DEIR. AES will provide up to three (3) poster board displays for the meeting. It is assumed that the County will be responsible for reserving an appropriate venue. If desired, a court reporter will be provided by the County.

**Deliverables:** AES will provide the County with ten (10) bound hardcopies one (1) CD copy in color PDF format of the Draft EIR. Fifteen (15) CD copies of the Draft EIR with hardcopies of the Executive Summary will be submitted as required to the State Clearinghouse with the Notice of Availability. AES will provide electronic copies of the proposed poster board exhibits prior to the public town hall meeting for approval.

**Task 5: Final EIR and Mitigation Monitoring and Reporting Plan.** AES will compile comments received from the public and other interested parties during the 45-day public review period for the Draft EIR, and summarize key issues for discussion with the County. AES will meet with County staff to go over the approach for responding to key issues raised during the DEIR public review period. Following this meeting, AES will formulate responses, and make any necessary revisions to the EIR. This Scope of Work assumes a moderate level of effort will be required to respond to comments. A moderate level of effort is considered to be less than 15 comment letters and 50 individual substantive comments that require a response beyond comment noted. The Response to Comments and any refinements to the DEIR text will be incorporated into a “freestanding” Final EIR. AES will prepare a Mitigation Monitoring and Reporting Plan (MMRP) to support the County’s certification of the Final EIR. The MMRP will be referenced within the text of the Final EIR and will be included as an appendix in the final document.

**Deliverables:** AES will provide the County with a total of ten (10) bound hardcopies and one (1) CD copy in PDF format of the Final EIR.

**Task 6: Findings and Final EIR Certification Support.** AES will assist with preparation of the Findings of Fact and Statement of Overriding Considerations. AES will attend/present at one meeting with the Planning Commission, and up to two staff meetings for certification of the Final EIR and Findings and Statement of Overriding Considerations.

**Task 7: Project Management and Meetings.** The AES management team will complete the myriad of small and often unforeseen tasks required to implement the preparation of an EIR. This includes numerous phone calls and emails necessary to facilitate information exchange between the Project Team and jurisdictional agencies, as well as the time required to prepare agendas, meeting minutes, schedules, and other such documents. Under this task, AES will:

- Attend a scoping hearing;
- Participate in up to 3 (3) two-hour project coordination meetings with planning staff at the County offices for the development of the Draft EIR;
- Attend up to two (2) Planning Commission hearings; and
- Participate in up to ten (10) one-hour project related conference calls with members of the project team and jurisdictional agencies.

**Deliverables:** AES will submit monthly status reports to the Project Team via email by the fifth business day of each month. AES will prepare and distribute minutes for each project-related meeting that will outline key decisions and action items.

**County of San Mateo  
Contractor's Declaration Form**

**I. CONTRACTOR INFORMATION**

Contractor Name:	Analytical Environmental Services	Phone:	916-447-3479
Contact Person:	David Zweig	Fax:	916-447-1665
Address:	1801 7 <sup>th</sup> Street, Suite 100 Sacramento, CA 95811	Number of employees:	27

**II. EQUAL BENEFITS** (check one or more boxes)

*Contractors with contracts in excess of \$5,000 must treat spouses and domestic partners equally as to employee benefits.*

- Contractor complies with the County's Equal Benefits Ordinance by:
  - offering equal benefits to employees with spouses and employees with domestic partners.
  - offering a cash equivalent payment to eligible employees in lieu of equal benefits.
- Contractor does not comply with the County's Equal Benefits Ordinance.
- Contractor is exempt from this requirement because:
  - Contractor has no employees, does not provide benefits to employees' spouses, or the contract is for \$5,000 or less.
  - Contractor is a party to a collective bargaining agreement that began on \_\_\_\_\_ (date) and expires on \_\_\_\_\_ (date), and intends to offer equal benefits when said agreement expires.

**III. NON-DISCRIMINATION** (check appropriate box)

- Finding(s) of discrimination have been issued against Contractor within the past year by the Equal Employment Opportunity Commission, Fair Employment and Housing Commission, or other investigative entity. Please see attached sheet of paper explaining the outcome(s) or remedy for the discrimination.
- No finding of discrimination has been issued in the past year against the Contractor by the Equal Employment Opportunity Commission, Fair Employment and Housing Commission, or any other entity.

**IV. EMPLOYEE JURY SERVICE** (check one or more boxes)

*Contractors with original or amended contracts in excess of \$100,000 must have and adhere to a written policy that provides its employees living in San Mateo County up to five days regular pay for actual jury service in the County.*

- Contractor complies with the County's Employee Jury Service Ordinance.
- Contractor does not comply with the County's Employee Jury Service Ordinance.
- Contractor is exempt from this requirement because:
  - the contract is for \$100,000 or less.
  - Contractor is a party to a collective bargaining agreement that began on \_\_\_\_\_ (date) and expires on \_\_\_\_\_ (date), and intends to comply when the collective bargaining agreement expires.
  - Contractor has no employees.
  - Contractor has no employees who live in San Mateo County.

**I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct, and that I am authorized to bind this entity contractually.**

## Request for Taxpayer Identification Number and Certification

Give Form to the  
requester. Do not  
send to the IRS.

Print or type See Specific Instructions on page 2.	Name (as shown on your income tax return) <b>Analytical Environmental Services</b>	
	Business name/disregarded entity name, if different from above	
	Check appropriate box for federal tax classification: <input type="checkbox"/> Individual/sole proprietor <input type="checkbox"/> C Corporation <input checked="" type="checkbox"/> S Corporation <input type="checkbox"/> Partnership <input type="checkbox"/> Trust/estate  <input type="checkbox"/> Limited liability company. Enter the tax classification (C=C corporation, S=S corporation, P=partnership) ▶ _____ <input type="checkbox"/> Exempt payee  <input type="checkbox"/> Other (see instructions) ▶ _____	
	Address (number, street, and apt. or suite no.) <b>1801 7th Street, Suite 100</b>	Requester's name and address (optional) <b>County of San Mateo 455 County Center, 2nd Floor Redwood City, CA 94063</b>
	City, state, and ZIP code <b>Sacramento, CA 95811</b>	List account number(s) here (optional)

**Part I Taxpayer Identification Number (TIN)**

Enter your TIN in the appropriate box. The TIN provided must match the name given on the "Name" line to avoid backup withholding. For individuals, this is your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the Part I instructions on page 3. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN* on page 3.

**Note.** If the account is in more than one name, see the chart on page 4 for guidelines on whose number to enter.

<b>Social security number</b>									
<b>Employer identification number</b>									
6	8		-	0	4	6	8	5	0

**Part II Certification**

Under penalties of perjury, I certify that:

- The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me), and
- I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding, and
- I am a U.S. citizen or other U.S. person (defined below).

**Certification instructions.** You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions on page 4.

<b>Sign Here</b>	Signature of U.S. person ▶	Date ▶ <u>12/6/12</u>
------------------	----------------------------	-----------------------

**General Instructions**

Section references are to the Internal Revenue Code unless otherwise noted.

**Purpose of Form**

A person who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

- Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
- Certify that you are not subject to backup withholding, or
- Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income.

**Note.** If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

**Definition of a U.S. person.** For federal tax purposes, you are considered a U.S. person if you are:

- An individual who is a U.S. citizen or U.S. resident alien,
- A partnership, corporation, company, or association created or organized in the United States or under the laws of the United States,
- An estate (other than a foreign estate), or
- A domestic trust (as defined in Regulations section 301.7701-7).

**Special rules for partnerships.** Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax on any foreign partners' share of income from such business. Further, in certain cases where a Form W-9 has not been received, a partnership is required to presume that a partner is a foreign person, and pay the withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid withholding on your share of partnership income.

**DESCRIPTION OF OPERATIONS / LOCATIONS / VEHICLES / EXCLUSIONS ADDED BY ENDORSEMENT / SPECIAL PROVISIONS**

The County of San Mateo, their board of supervisors, officers, agents and employees are included as additional insureds for general & automobile liability for the coverages afforded herein. Coverage is primary with waiver of subrogation. If The County or its officers and employees have other insurance against the loss covered by such a policy, such other insurance shall be excess insurance only.

<b>CERTIFICATE HOLDER</b> County of San Mateo 455 County Center, 2nd Floor Redwood City, CA 94063	<b>CANCELLATION</b> SHOULD ANY OF THE ABOVE DESCRIBED POLICIES BE CANCELLED BEFORE THE EXPIRATION DATE THEREOF, THE ISSUING INSURER WILL <del>NOTICE</del> TO MAIL 30 DAYS WRITTEN NOTICE TO THE CERTIFICATE HOLDER NAMED TO THE LEFT, BUT FAILURE TO DO SO SHALL IMPOSE NO OBLIGATION OR LIABILITY OF ANY KIND UPON THE INSURER, ITS AGENTS OR REPRESENTATIVES. AUTHORIZED REPRESENTATIVE 
--	--

**THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.**

**BLANKET ADDITIONAL INSURED – LIABILITY EXTENSION**

This endorsement modifies insurance provided under the following:

**BUSINESSOWNERS LIABILITY COVERAGE FORM**

Coverage afforded under this extension of coverage endorsement does not apply to any person or organization covered as an additional insured on any other endorsement now or hereafter attached to this Policy.

**1. ADDITIONAL INSURED – BLANKET VENDORS**

WHO IS AN INSURED is amended to include as an additional insured any person or organization (referred to below as vendor) with whom you agreed, because of a written contract or agreement to provide insurance, but only with respect to "bodily injury" or "property damage" arising out of "your products" which are distributed or sold in the regular course of the vendor's business, subject to the following additional exclusions:

1. The insurance afforded the vendor does not apply to:
  - a. "Bodily injury" or "property damage" for which the vendor is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that the vendor would have in the absence of the contract or agreement;
  - b. Any express warranty unauthorized by you;
  - c. Any physical or chemical change in the product made intentionally by the vendor;
  - d. Repackaging, except when unpacked solely for the purpose of inspection, demonstration, testing, or the substitution of parts under instructions from the manufacturer, and then repackaged in the original container;
  - e. Any failure to make such inspections, adjustments, tests or servicing as the vendor has agreed to make or normally undertakes to make in the usual course of business, in connection with the distribution or sale of the products;
  - f. Demonstration, installation, servicing or repair operations, except such operations performed at the vendor's premises in connection with the sale of the product;
  - g. Products which, after distribution or sale by you, have been labeled or relabeled or used as a container, part or ingredient of any other thing or substance by or for the vendor; or
  - h. "Bodily injury" or "property damage" arising out of the sole negligence of the vendor for its own acts or omission or those of its

employees or anyone else acting on its behalf. However, this exclusion does not apply to:

- (1) The exceptions contained in Subparagraphs d. or f.; or
- (2) Such inspections, adjustments, tests or servicing as the vendor has agreed to make or normally undertakes to make in the usual course of business, in connection with the distribution or sale of the products.

2. This insurance does not apply to any insured person or organization, from whom you have acquired such products, or any ingredient, part or container, entering into, accompanying or containing such products.
3. This provision 2. does not apply to any vendor included as an insured by an endorsement issued by us and made a part of this Policy.
4. This provision 2. does not apply if "bodily injury" or "property damage" included within the "products-completed operations hazard" is excluded either by the provisions of the Policy or by endorsement.

**2. MISCELLANEOUS ADDITIONAL INSUREDS**

WHO IS AN INSURED is amended to include as an insured any person or organization (called additional insured) described in paragraphs 2.a. through 2.h. below whom you are required to add as an additional insured on this policy under a written contract or agreement but the written contract or agreement must be:

1. Currently in effect or becoming effective during the term of this policy; and
2. Executed prior to the "bodily injury," "property damage" or "personal and advertising injury," but

Only the following persons or organizations are additional insureds under this endorsement and coverage provided to such additional insureds is limited as provided herein:

**a. Additional Insured – Your Work**

That person or organization for whom you do work is an additional insured solely for liability due to your negligence specifically resulting

20020004320979847436858

from your work for the additional insured which is the subject of the written contract or written agreement. No coverage applies to liability resulting from the sole negligence of the additional insured.

The insurance provided to the additional insured is limited as follows:

- (1) The Limits of Insurance applicable to the additional insured are those specified in the written contract or written agreement or in the Declarations of this policy, whichever is less. These Limits of Insurance are inclusive of, and not in addition to, the Limits of Insurance shown in the Declarations.
- (2) The coverage provided to the additional insured by this endorsement and paragraph F.9. of the definition of "insured contract" under **Liability and Medical Expenses Definitions** do not apply to "bodily injury" or "property damage" arising out of the "products-completed operations hazard" unless required by the written contract or written agreement.
- (3) The insurance provided to the additional insured does not apply to "bodily injury," "property damage," or "personal and advertising injury" arising out of the rendering or failure to render any professional services.

**b. State or Political Subdivisions**

A state or political subdivision subject to the following provisions:

- (1) This insurance applies only with respect to the following hazards for which the state or political subdivision has issued a permit in connection with premises you own, rent, or control and to which this insurance applies:
  - (a) The existence, maintenance, repair, construction, erection, or removal of advertising signs, awnings, canopies, cellar entrances, coal holes, driveways, manholes, marquees, hoistaway openings, sidewalk vaults, street banners, or decorations and similar exposures; or
  - (b) The construction, erection, or removal of elevators; or
- (2) This insurance applies only with respect to operations performed by you or on your behalf for which the state or political subdivision has issued a permit.

This insurance does not apply to "bodily injury," "property damage" or "personal and advertising injury" arising out of operations performed for the state or municipality.

**c. Controlling Interest**

Any persons or organizations with a controlling interest in you but only with respect to their liability arising out of:

- (1) Their financial control of you; or
- (2) Premises they own, maintain or control while you lease or occupy these premises.

This insurance does not apply to structural alterations, new construction and demolition operations performed by or for such additional insured.

**d. Managers or Lessors of Premises**

A manager or lessor of premises but only with respect to liability arising out of the ownership, maintenance or use of that specific part of the premises leased to you and subject to the following additional exclusions:

This insurance does not apply to:

- (1) Any "occurrence" which takes place after you cease to be a tenant in that premises; or
- (2) Structural alterations, new construction or demolition operations performed by or on behalf of such additional insured.

**e. Mortgagee, Assignee or Receiver**

A mortgagee, assignee or receiver but only with respect to their liability as mortgagee, assignee, or receiver and arising out of the ownership, maintenance, or use of a premises by you.

This insurance does not apply to structural alterations, new construction or demolition operations performed by or for such additional insured.

**f. Owners/Other Interests – Land is Leased**

An owner or other interest from whom land has been leased by you but only with respect to liability arising out of the ownership, maintenance or use of that specific part of the land leased to you and subject to the following additional exclusions:

This insurance does not apply to:

- (1) Any "occurrence" which takes place after you cease to lease that land; or

- (2) Structural alterations, new construction or demolition operations performed by or on behalf of such additional insured.

**g. Co-owner of Insured Premises**

A co-owner of a premises co-owned by you and covered under this insurance but only with respect to the co-owners liability as co-owner of such premises.

**h. Lessor of Equipment**

Any person or organization from whom you lease equipment. Such person or organization are insureds only with respect to their liability arising out of the maintenance, operation or use by you of equipment leased to you by such person or organization. A person's or organization's status as an insured under this endorsement ends when their written contract or agreement with you for such leased equipment ends.

With respect to the insurance afforded these additional insureds, the following additional exclusions apply:

This insurance does not apply:

- (1) To any "occurrence" which takes place after the equipment lease expires; or
- (2) To "bodily injury," "property damage" or "personal and advertising injury" arising out of the sole negligence of such additional insured.

Any insurance provided to an additional insured designated under paragraphs b. through h. above does not apply to "bodily injury" or "property damage" included within the "products-completed operations hazard."

**3. The following is added to Paragraph H. of the BUSINESSOWNERS COMMON POLICY CONDITIONS:**

**H. Other Insurance**

- 4. This insurance is excess over any other insurance naming the additional insured as an insured whether primary, excess, contingent or on any other basis unless a written contract or written agreement specifically requires that this insurance be either primary or primary and noncontributing.

**4. LEGAL LIABILITY – DAMAGE TO PREMISES**

- A. Under B. Exclusions, 1. Applicable to Business Liability Coverage, Exclusion k.

**Damage To Property**, is replaced by the following:

**k. Damage To Property**

"Property damage" to:

- 1. Property you own, rent or occupy, including any costs or expenses incurred by you, or any other person, organization or entity, for repair, replacement, enhancement, restoration or maintenance of such property for any reason, including prevention of injury to a person or damage to another's property;
- 2. Premises you sell, give away or abandon, if the "property damage" arises out of any part of those premises;
- 3. Property loaned to you;
- 4. Personal property in the care, custody or control of the insured;
- 5. That particular part of any real property on which you or any contractors or subcontractors working directly or indirectly in your behalf are performing operations, if the "property damage" arises out of those operations; or
- 6. That particular part of any property that must be restored, repaired or replaced because "your work" was incorrectly performed on it.

Paragraph 2 of this exclusion does not apply if the premises are "your work" and were never occupied, rented or held for rental by you.

Paragraphs 1, 3, and 4, of this exclusion do not apply to "property damage" (other than damage by fire or explosion) to premises:

- (1) rented to you;
- (2) temporarily occupied by you with the permission of the owner, or
- (3) to the contents of premises rented to you for a period of 7 or fewer consecutive days.

A separate limit of insurance applies to Damage To Premises Rented To You as described in Section D – Liability and Medical Expenses Limits of Insurance.

20020004320979647436859

Paragraphs 3, 4, 5, and 6 of this exclusion do not apply to liability assumed under a sidetrack agreement.

Paragraph 6 of this exclusion does not apply to "property damage" included in the "products-completed operations hazard."

- B. Under **B. Exclusions, 1. Applicable to Business Liability Coverage**, the last paragraph of 2. Exclusions is deleted and replaced by the following:

Exclusions **c, d, e, f, g, h, i, k, l, m, n, and o**, do not apply to damage by fire to premises while rented to you or temporarily occupied by you with permission of the owner or to the contents of premises rented to you for a period of 7 or fewer consecutive days. A separate limit of insurance applies to this coverage as described in **Section D. Liability And Medical Expenses Limits Of Insurance**.

- C. The first Paragraph under item **5. Damage To Premises Rented To You Limit of Section D. Liability And Medical Expenses Limits Of Insurance** is replaced by the following:

The most we will pay under Business Liability for damages because of "property damage" to any one premises, while rented to you, or temporarily occupied by you, with the permission of the owner, including contents of such premises rented to you for a period of 7 or fewer consecutive days, is the Damage to Premises Rented to You limit shown in the Declaration.

**5. Broad Knowledge of Occurrence**

The following items are added to **E. Businessowners General Liability Conditions** in the **Businessowners Liability Coverage Form**:

- e. Paragraphs a. and b. apply to you or to any additional insured only when such "occurrence," offense, claim or "suit" is known to:
- (1) You or any additional insured that is an individual;
  - (2) Any partner, if you or an additional insured is a partnership;
  - (3) Any manager, if you or an additional insured is a limited liability company;
  - (4) Any "executive officer" or insurance manager, if you or an additional insured is a corporation;

- (5) Any trustee, if you or an additional insured is a trust; or
- (6) Any elected or appointed official, if you or an additional insured is a political subdivision or public entity.

This paragraph e. applies separately to you and any additional insured.

**6. Bodily Injury**

**Section F. Liability and Medical Expenses Definitions**, item 3. "Bodily Injury" is deleted and replaced with the following:

"Bodily injury" means bodily injury, sickness or disease sustained by a person, including death, humiliation, shock, mental anguish or mental injury by that person at any time which results as a consequence of the bodily injury, sickness or disease.

**7. Expanded Personal and Advertising Injury Definition**

The following is added to **Section F. Liability and Medical Expenses Definitions**, item 14. **Personal and Advertising Injury**, in the **Businessowners General Liability Coverage Form**:

- h. Discrimination or humiliation that results in injury to the feelings or reputation of a natural person, but only if such discrimination or humiliation is:
1. Not done intentionally by or at the direction of:
    - a. The insured; or
    - b. Any "executive officer," director, stockholder, partner, member or manager (if you are a limited liability company) of the insured; and
  2. Not directly or indirectly related to the employment, prospective employment, past employment or termination of employment of any person or person by any insured.

**B. The following is added to Exclusions, Section B.:**

**(15) Discrimination Relating to Room, Dwelling or Premises**

Caused by discrimination directly or indirectly related to the sale, rental, lease or sub-lease or prospective sale, rental, lease or sub-lease of any room, dwelling or premises by or at the direction of any insured.

**(16) Fines or Penalties**

Fines or penalties levied or imposed by a governmental entity because of discrimination.

- C. This provision (**Expanded Personal and Advertising Injury**) does not apply to discrimination or humiliation committed in the states of New York or Ohio. Also, **Expanded**

**Personal and Advertising Injury Coverage** does not apply to policies issued in the states of New York or Ohio.

- D. This provision (**Expanded Personal and Advertising Injury**) does not apply if **Personal and Advertising Injury Liability** is excluded either by the provisions of the Policy or by endorsement.

**THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.**

## **AUTO COVERAGE PLUS ENDORSEMENT**

This endorsement modifies insurance provided under the following:

### **BUSINESS AUTO COVERAGE FORM**

With respect to coverage provided by this endorsement, the provisions of the Coverage Form apply unless modified by the endorsement.

**GENERAL DESCRIPTION OF COVERAGE** – This endorsement broadens coverage. However, coverage for any injury, damage or medical expenses described in any of the provisions of this endorsement may be excluded or limited by another endorsement to the Coverage Part, and these coverage broadening provisions do not apply to the extent that coverage is excluded or limited by such an endorsement. The following listing is a general coverage description only. Limitations and exclusions may apply to these coverages. Read all the provisions of this endorsement and the rest of your policy carefully to determine rights, duties, and what is and is not covered.

#### **A. BLANKET ADDITIONAL INSURED**

The following is added to Paragraph A.1., **Who Is An Insured**, of **SECTION II – LIABILITY COVERAGE**:

Any person or organization who is required under a written contract or agreement between you and that person or organization, that is signed and executed by you before the "bodily injury" or "property damage" occurs and that is in effect during the policy period, to be named as an additional insured is an "insured" for Liability Coverage, but only for damages to which this insurance applies and only to the extent that person or organization qualifies as an "insured" under the Who Is An Insured provision contained in Section II.

#### **B. EMPLOYEE HIRED AUTO**

1. The following is added to Paragraph A.1., **Who Is An Insured**, of **SECTION II – LIABILITY COVERAGE**:

An "employee" of yours is an "insured" while operating a covered "auto" hired or rented under a contract or agreement in that "employee's" name, with your permission, while

performing duties related to the conduct of your business.

2. The following replaces Paragraph b. in B.5., **Other Insurance**, of **SECTION IV – BUSINESS AUTO CONDITIONS**:

b. For Hired Auto Physical Damage Coverage, the following are deemed to be covered "autos" you own:

- (1) Any covered "auto" you lease, hire, rent or borrow; and
- (2) Any covered "auto" hired or rented by your "employee" under a contract in that individual "employee's" name, with your permission, while performing duties related to the conduct of your business.

However, any "auto" that is leased, hired, rented or borrowed with a driver is not a covered "auto".

#### **C. EMPLOYEES AS INSURED**

The following is added to Paragraph A.1., **Who Is An Insured**, of **SECTION II – LIABILITY COVERAGE**:

COMMERCIAL AUTO

Any "employee" of yours is an "insured" while using a covered "auto" you don't own, hire or borrow in your business or your personal affairs.

**D. SUPPLEMENTARY PAYMENTS – INCREASED LIMITS**

1. The following replaces Paragraph A.2.a.(2) of **SECTION II – LIABILITY COVERAGE**:
  - (2) Up to \$3,000 for cost of bail bonds (including bonds for related traffic law violations) required because of an "accident" we cover. We do not have to furnish these bonds.
2. The following replaces Paragraph A.2.a.(4) of **SECTION II – LIABILITY COVERAGE**:
  - (4) All reasonable expenses incurred by the "insured" at our request, including actual loss of earnings up to \$500 a day because of time off from work.

**E. TRAILERS – INCREASED LOAD CAPACITY**

The following replaces Paragraph C.1. of **SECTION I – COVERED AUTOS**:

1. "Trailers" with a load capacity of 3,000 pounds or less designed primarily for travel on public roads.

**F. HIRED AUTO PHYSICAL DAMAGE**

The following is added to Paragraph A.4., **Coverage Extensions**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

**Hired Auto Physical Damage Coverage**

If hired "autos" are covered "autos" for Liability Coverage but not covered "autos" for Physical Damage Coverage, and this policy also provides Physical Damage Coverage for an owned "auto", then the Physical Damage Coverage is extended to "autos" that you hire, rent or borrow subject to the following:

- (1) The most we will pay for "loss" in any one "accident" to a hired, rented or borrowed "auto" is the lesser of:
  - (a) \$50,000;
  - (b) The actual cash value of the damaged or stolen property as of the time of the "loss"; or
  - (c) The cost of repairing or replacing the damaged or stolen property with other property of like kind and quality.
- (2) An adjustment for depreciation and physical condition will be made in determining actual cash value in the event of a total "loss".

- (3) If a repair or replacement results in better than like kind or quality, we will not pay for the amount of betterment.
- (4) A deductible equal to the highest Physical Damage deductible applicable to any owned covered "auto".
- (5) This Coverage Extension does not apply to:
  - (a) Any "auto" that is hired, rented or borrowed with a driver; or
  - (b) Any "auto" that is hired, rented or borrowed from your "employee".

**G. PHYSICAL DAMAGE – TRANSPORTATION EXPENSES – INCREASED LIMIT**

The following replaces the first sentence in Paragraph A.4.a., **Transportation Expenses**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

We will pay up to \$50 per day to a maximum of \$1,500 for temporary transportation expense incurred by you because of the total theft of a covered "auto" of the private passenger type.

**H. AUDIO, VISUAL AND DATA ELECTRONIC EQUIPMENT – INCREASED LIMIT**

Paragraph C.2., **Limit Of Insurance**, of **SECTION III – PHYSICAL DAMAGE COVERAGE** is deleted.

**I. WAIVER OF DEDUCTIBLE – GLASS**

The following is added to Paragraph D., **Deductible**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

No deductible for a covered "auto" will apply to glass damage if the glass is repaired rather than replaced.

**J. PERSONAL EFFECTS**

The following is added to Paragraph A.4., **Coverage Extensions**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

**Personal Effects Coverage**

We will pay up to \$400 for "loss" to wearing apparel and other personal effects which are:

- (1) Owned by an "insured"; and
- (2) In or on your covered "auto".

This coverage only applies in the event of a total theft of your covered "auto".

No deductibles apply to Personal Effects coverage.

**K. AIRBAGS**

The following is added to Paragraph B.3., Exclusions, of SECTION III – PHYSICAL DAMAGE COVERAGE:

Exclusion 3.a. does not apply to "loss" to one or more airbags in a covered "auto" you own that inflate due to a cause other than a cause of "loss" set forth in Paragraphs A.1.b. and A.1.c., but only:

- a. If that "auto" is a covered "auto" for Comprehensive Coverage under this policy;
- b. The airbags are not covered under any warranty; and
- c. The airbags were not intentionally inflated.

We will pay up to a maximum of \$1,000 for any one "loss".

**L. AUTO LOAN LEASE GAP**

The following is added to Paragraph A.4., Coverage Extensions, of SECTION III – PHYSICAL DAMAGE COVERAGE:

**Auto Loan Lease Gap Coverage for Private Passenger Type Vehicles**

In the event of a total "loss" to a covered "auto" of the private passenger type shown in the Schedule or Declarations for which Physical Damage Coverage is provided, we will pay any unpaid amount due on the lease or loan for such covered "auto" less the following:

- (1) The amount paid under the Physical Damage Coverage Section of the policy for that "auto"; and

(2) Any:

- (a) Overdue lease or loan payments at the time of the "loss";
- (b) Financial penalties imposed under a lease for excessive use, abnormal wear and tear or high mileage;
- (c) Security deposits not returned by the lessor;
- (d) Costs for extended warranties, Credit Life Insurance, Health, Accident or Disability Insurance purchased with the loan or lease; and
- (e) Carry-over balances from previous loans or leases.

**M. BLANKET WAIVER OF SUBROGATION**

The following replaces Paragraph A.5., Transfer Of Rights Of Recovery Against Others To Us, of SECTION IV – BUSINESS AUTO CONDITIONS:

**5. Transfer Of Rights Of Recovery Against Others To Us**

We waive any right of recovery we may have against any person or organization to the extent required of you by a written contract executed prior to any "accident" or "loss", provided that the "accident" or "loss" arises out of the operations contemplated by such contract. The waiver applies only to the person or organization designated in such contract.

## Request for Taxpayer Identification Number and Certification

Give Form to the  
 requester. Do not  
 send to the IRS.

Print or type See Specific Instructions on page 2.	Name (as shown on your income tax return) <b>Analytical Environmental Services</b>	
	Business name/disregarded entity name, if different from above	
	Check appropriate box for federal tax classification: <input type="checkbox"/> Individual/sole proprietor <input type="checkbox"/> C Corporation <input checked="" type="checkbox"/> S Corporation <input type="checkbox"/> Partnership <input type="checkbox"/> Trust/estate  <input type="checkbox"/> Limited liability company. Enter the tax classification (C=C corporation, S=S corporation, P=partnership) ▶  <input type="checkbox"/> Other (see instructions) ▶	
	<input type="checkbox"/> Exempt payee	
	Address (number, street, and apt. or suite no.) <b>1801 7th Street, Suite 100</b> City, state, and ZIP code <b>Sacramento, CA 95811</b>	
List account number(s) here (optional)		
Requester's name and address (optional) <b>County of San Mateo</b> <b>455 County Center, 2nd Floor</b> <b>Redwood City, CA 94063</b>		

### Part I Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. The TIN provided must match the name given on the "Name" line to avoid backup withholding. For individuals, this is your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the Part I instructions on page 3. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN* on page 3.

Social security number								

**Note.** If the account is in more than one name, see the chart on page 4 for guidelines on whose number to enter.

Employer identification number								
6	8	-	0	4	6	8	5	0

### Part II Certification

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me), and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding, and
3. I am a U.S. citizen or other U.S. person (defined below).

**Certification instructions.** You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions on page 4.

<b>Sign Here</b>	Signature of U.S. person ▶	Date ▶
		12/6/12

### General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

#### Purpose of Form

A person who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

1. Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
2. Certify that you are not subject to backup withholding, or
3. Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income.

**Note.** If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

**Definition of a U.S. person.** For federal tax purposes, you are considered a U.S. person if you are:

- An individual who is a U.S. citizen or U.S. resident alien,
- A partnership, corporation, company, or association created or organized in the United States or under the laws of the United States,
- An estate (other than a foreign estate), or
- A domestic trust (as defined in Regulations section 301.7701-7).

**Special rules for partnerships.** Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax on any foreign partners' share of income from such business. Further, in certain cases where a Form W-9 has not been received, a partnership is required to presume that a partner is a foreign person, and pay the withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid withholding on your share of partnership income.

**AGREEMENT BETWEEN THE COUNTY OF SAN MATEO AND  
ANALYTICAL ENVIRONMENTAL SERVICES**

THIS AGREEMENT, entered into this 7 day of May 2013, by and between the COUNTY OF SAN MATEO, hereinafter called "County," and Analytical Environmental Services, hereinafter called "Contractor."

W I T N E S S E T H:

WHEREAS, pursuant to Government Code, Section 31000, County may contract with independent contractors for the furnishing of such services to or for County or any Department thereof;

WHEREAS, it is necessary and desirable that Contractor be retained for the purpose of preparing an Environmental Impact Report for the proposed Ascensions Heights subdivision project (County File number PLN2002-00517) to be re-circulated.

**NOW, THEREFORE, IT IS HEREBY AGREED BY THE PARTIES HERETO AS FOLLOWS:**

**1. Exhibits and Attachments**

The following exhibits and attachments are included hereto and incorporated by reference herein:

- Exhibit A—Services
- Exhibit B—Payments and rates
- Exhibit C—Scope of Work

**2. Services to be performed by Contractor**

In consideration of the payments set forth herein and in Exhibit "B," Contractor shall perform services for County in accordance with the terms, conditions and specifications set forth herein and in Exhibit "A."

**3. Payments**

In consideration of the services provided by Contractor in accordance with all terms, conditions and specifications set forth herein and in Exhibit "A," County shall make payment to Contractor based on the rates and in the manner specified in Exhibit "B." The County reserves the right to withhold payment if the County determines that the quantity or quality of the work performed is unacceptable. In no event shall the County's total fiscal obligation under this Agreement exceed One Hundred Thirteen Thousand Seventy-Five Dollars, \$113,075.

**4. Term and Termination**

Subject to compliance with all terms and conditions, the term of this Agreement shall be from May 9, 2013 through May 9, 2014.

This Agreement may be terminated by Contractor, the Director of Community Development or his/her designee at any time without a requirement of good cause upon thirty (30) days' written notice to the other party.

In the event of termination, all finished or unfinished documents, data, studies, maps, photographs, reports, and materials (hereafter referred to as materials) prepared by Contractor under this Agreement shall become the property of the County and shall be promptly delivered to the County. Upon termination, the Contractor may make and retain a copy of such materials. Subject to availability of funding, Contractor shall be entitled to receive payment for work/services provided prior to termination of the Agreement. Such payment shall be that portion of the full payment which is determined by comparing the work/services completed to the work/services required by the Agreement.

**5. Availability of Funds**

The County may terminate this Agreement or a portion of the services referenced in the Attachments and Exhibits based upon unavailability of Federal, State, or County funds, by providing written notice to Contractor as soon as is reasonably possible after the County learns of said unavailability of outside funding.

**6. Relationship of Parties**

Contractor agrees and understands that the work/services performed under this Agreement are performed as an independent Contractor and not as an employee of the County and that Contractor acquires none of the rights, privileges, powers, or advantages of County employees.

**7. Hold Harmless**

Contractor shall indemnify and save harmless County, its officers, agents, employees, and servants from all claims, suits, or actions of every name, kind, and description, brought for, or on account of: (A) injuries to or death of any person, including Contractor, or (B) damage to any property of any kind whatsoever and to whomsoever belonging, (C) any sanctions, penalties, or claims of damages resulting from Contractor's failure to comply with the requirements set forth in the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and all Federal regulations promulgated thereunder, as amended, or (D) any other loss or cost, including but not limited to that caused by the concurrent active or passive negligence of County, its officers, agents, employees, or servants, resulting from the performance of any work required of Contractor or payments made pursuant to this Agreement, provided that this shall not apply to injuries or damage for which County has been found in a court of competent jurisdiction to be solely liable by reason of its own negligence or willful misconduct.

The duty of Contractor to indemnify and save harmless as set forth herein, shall include the duty to defend as set forth in Section 2778 of the California Civil Code.

**8. Assignability and Subcontracting**

Contractor shall not assign this Agreement or any portion thereof to a third party or subcontract with a third party to provide services required by contractor under this Agreement without the prior written consent of County. Any such assignment or subcontract without the County's prior written consent shall give County the right to automatically and immediately terminate this Agreement.

**9. Insurance**

The Contractor shall not commence work or be required to commence work under this Agreement unless and until all insurance required under this paragraph has been obtained and such insurance has been approved by Risk Management, and Contractor shall use diligence to obtain such insurance and to obtain such approval. The Contractor shall furnish the County with certificates of insurance evidencing the required coverage, and there shall be a specific contractual liability endorsement extending the Contractor's coverage to include the contractual liability assumed by the Contractor pursuant to this Agreement. These certificates shall specify or be endorsed to provide that thirty (30) days' notice must be given, in writing, to the County of any pending change in the limits of liability or of any cancellation or modification of the policy.

- (1) **Worker's Compensation and Employer's Liability Insurance** The Contractor shall have in effect during the entire life of this Agreement Workers' Compensation and Employer's Liability Insurance providing full statutory coverage. In signing this Agreement, the Contractor certifies, as required by Section 1861 of the California Labor Code, that it is aware of the provisions of Section 3700 of the California Labor Code which requires every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of the Code, and will comply with such provisions before commencing the performance of the work of this Agreement.
  
- (2) **Liability Insurance** The Contractor shall take out and maintain during the life of this Agreement such Bodily Injury Liability and Property Damage Liability Insurance as shall protect him/her while performing work covered by this Agreement from any and all claims for damages for bodily injury, including accidental death, as well as any and all claims for property damage which may arise from contractors operations under this Agreement, whether such operations be by himself/herself or by any sub-contractor or by anyone directly or indirectly employed by either of them. Such insurance shall be combined single limit bodily injury and property damage for each occurrence and shall be not less than the amount specified below.

Such insurance shall include:

- (a) Comprehensive General Liability . . . . . \$1,000,000
- (b) Motor Vehicle Liability Insurance . . . . . \$1,000,000
- (c) Professional Liability . . . . . \$1,000,000

County and its officers, agents, employees and servants shall be named as additional insured on any such policies of insurance, which shall also contain a provision that the insurance afforded thereby to the County, its officers, agents, employees and servants shall be primary insurance to the full limits of liability of the policy, and that if the County or its officers and employees have other insurance against the loss covered by such a policy, such other insurance shall be excess insurance only.

In the event of the breach of any provision of this section, or in the event any notice is received which indicates any required insurance coverage will be diminished or canceled, the County of San Mateo at its option, may, notwithstanding any other provision of this Agreement to the contrary, immediately declare a material breach of this Agreement and suspend all further work pursuant to this Agreement.

**10. Compliance with laws; payment of Permits/Licenses**

All services to be performed by Contractor pursuant to this Agreement shall be performed in accordance with all applicable Federal, State, County, and municipal laws, ordinances and regulations, including, but not limited to, the Health Insurance Portability and Accountability Act of 1996 (HIPAA), and the Federal Regulations promulgated thereunder, as amended, and will comply with the Business Associate requirements set forth in Attachment "H," and the Americans with Disabilities Act of 1990, as amended, and Section 504 of the Rehabilitation Act of 1973, as amended and attached hereto and incorporated by reference herein as Attachment "I," which prohibits discrimination on the basis of handicap in programs and activities receiving any Federal or County financial assistance. Such services shall also be performed in accordance with all applicable ordinances and regulations, including, but not limited to, appropriate licensure, certification regulations, provisions pertaining to confidentiality of records, and applicable quality assurance regulations. In the event of a conflict between the terms of this Agreement and State, Federal, County, or municipal law or regulations, the requirements of the applicable law will take precedence over the requirements set forth in this Agreement. Further, Contractor certifies that the Contractor and all of its subcontractors will adhere to all applicable provisions of Chapter 4.106 of the San Mateo County Ordinance Code, which regulates the use of disposable food service ware.

Contractor will timely and accurately complete, sign, and submit all necessary documentation of compliance.

**11. Non-Discrimination and Other Requirements**

- A. *Section 504 applies only to Contractors who are providing services to members of the public.* Contractor shall comply with § 504 of the Rehabilitation Act of 1973, which provides that no otherwise qualified handicapped individual shall, solely by reason of a disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination in the performance of this Agreement.
- B. *General non-discrimination.* No person shall, on the grounds of race, color, religion, ancestry, gender, age (over 40), national origin, medical condition (cancer), physical or mental disability, sexual orientation, pregnancy, childbirth or related medical condition, marital status, or political affiliation be denied any benefits or subject to discrimination under this Agreement.

- C. *Equal employment opportunity.* Contractor shall ensure equal employment opportunity based on objective standards of recruitment, classification, selection, promotion, compensation, performance evaluation, and management relations for all employees under this Agreement. Contractor's equal employment policies shall be made available to County of San Mateo upon request.
- D. *Violation of Non-discrimination provisions.* Violation of the non-discrimination provisions of this Agreement shall be considered a breach of this Agreement and subject the Contractor to penalties, to be determined by the County Manager, including but not limited to
  - i) termination of this Agreement;
  - ii) disqualification of the Contractor from bidding on or being awarded a County contract for a period of up to 3 years;
  - iii) liquidated damages of \$2,500 per violation;
  - iv) imposition of other appropriate contractual and civil remedies and sanctions, as determined by the County Manager.

To effectuate the provisions of this section, the County Manager shall have the authority to examine Contractor's employment records with respect to compliance with this paragraph and/or to set off all or any portion of the amount described in this paragraph against amounts due to Contractor under the Contract or any other Contract between Contractor and County.

Contractor shall report to the County Manager the filing by any person in any court of any complaint of discrimination or the filing by any person of any and all charges with the Equal Employment Opportunity Commission, the Fair Employment and Housing Commission or any other entity charged with the investigation of allegations within 30 days of such filing, provided that within such 30 days such entity has not notified Contractor that such charges are dismissed or otherwise unfounded. Such notification shall include the name of the complainant, a copy of such complaint, and a description of the circumstance. Contractor shall provide County with a copy of their response to the Complaint when filed.

- E. *Compliance with Equal Benefits Ordinance.* With respect to the provision of employee benefits, Contractor shall comply with the County Ordinance which prohibits contractors from discriminating in the provision of employee benefits between an employee with a domestic partner and an employee with a spouse.
- F. The Contractor shall comply fully with the non-discrimination requirements required by 41 CFR 60-741.5(a), which is incorporated herein as if fully set forth.

## **12. Compliance with Contractor Employee Jury Service Ordinance**

Contractor shall comply with the County Ordinance with respect to provision of jury duty pay to employees and have and adhere to a written policy that provides that its employees shall receive from the Contractor, on an annual basis, no less than five days of regular pay for actual jury service in San Mateo County. The policy may provide that employees deposit any fees received for such jury service with the Contractor or that the Contractor deduct from the employees' regular pay the fees received for jury service.

**13. Retention of Records, Right to Monitor and Audit**

(a) CONTRACTOR shall maintain all required records for three (3) years after the COUNTY makes final payment and all other pending matters are closed, and shall be subject to the examination and/or audit of the County, a Federal grantor agency, and the State of California.

(b) Reporting and Record Keeping: CONTRACTOR shall comply with all program and fiscal reporting requirements set forth by appropriate Federal, State and local agencies, and as required by the COUNTY.

(c) CONTRACTOR agrees to provide to COUNTY, to any Federal or State department having monitoring or review authority, to COUNTY's authorized representatives, and/or their appropriate audit agencies upon reasonable notice, access to and the right to examine all records and documents necessary to determine compliance with relevant Federal, State, and local statutes, rules and regulations, and this Agreement, and to evaluate the quality, appropriateness and timeliness of services performed.

**14. Merger Clause**

This Agreement, including the Exhibits attached hereto and incorporated herein by reference, constitutes the sole Agreement of the parties hereto and correctly states the rights, duties, and obligations of each party as of this document's date. In the event that any term, condition, provision, requirement or specification set forth in this body of the agreement conflicts with or is inconsistent with any term, condition, provision, requirement or specification in any exhibit and/or attachment to this agreement, the provisions of this body of the agreement shall prevail. Any prior agreement, promises, negotiations, or representations between the parties not expressly stated in this document are not binding. All subsequent modifications shall be in writing and signed by the parties.

**15. Controlling Law and Venue**

The validity of this Agreement and of its terms or provisions, as well as the rights and duties of the parties hereunder, the interpretation, and performance of this Agreement shall be governed by the laws of the State of California. Any dispute arising out of this Agreement shall be venued either in the San Mateo County Superior Court or in the United States District Court for the Northern District of California.

**16. Notices**

Any notice, request, demand, or other communication required or permitted hereunder shall be deemed to be properly given when both (1) transmitted via facsimile to the telephone number listed below and (2) either deposited in the United State mail, postage prepaid, or when deposited for overnight delivery with an established overnight courier that provides a tracking number showing confirmation of receipt, for transmittal, charges prepaid, addressed to:

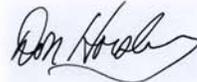

**In the case of County, to:**  
Director of Community Development  
Planning & Building Department  
455 County Center, Mail Drop PLN122  
Redwood City, CA 94063

**In the case of Contractor, to:**  
Analytical Environmental Services  
1801 7<sup>th</sup> Street, Ste 100  
Sacramento, CA 95811

In the event that the facsimile transmission is not possible, notice shall be given both by United States mail and an overnight courier as outlined above.

IN WITNESS WHEREOF, the parties hereto, by their duly authorized representatives, have affixed their hands.

COUNTY OF SAN MATEO

By: \_\_\_\_\_  
President, Board of Supervisors, San Mateo County

Date: May 7, 2013

ATTEST:   
By: \_\_\_\_\_  
Clerk of Said Board

Analytical Environmental Services (AES)  
  
\_\_\_\_\_  
Contractor's Signature

Date: 12-11-12

Resolution #072499

Exhibit "A"

In consideration of the payments set forth in Exhibit "B", Contractor shall provide the following services:

Contractor shall complete the preparation of an Environmental Impact Report for the proposed Ascensions Heights project (County File number PLN2002-00517) to be re-circulated. A complete Scope of Work is included in Exhibit C.

Exhibit "B"

In consideration of the services provided by Contractor in Exhibit "A", County shall pay Contractor based on the following fee schedule in attached Exhibit "B":

# EXHIBIT B - SCHEDULE OF CHARGES

AES schedule of hourly wage rates for the listing the labor categories, associated wage rates, and reimbursable expenses have been provided below.

Employee Category	Hourly Billing Rate
Principal	\$245
<b>Project Manager</b>	<b>\$140</b>
Analyst III	\$120
<b>Analyst II</b>	<b>\$110</b>
<b>Analyst I</b>	<b>\$105</b>
Cultural Resources Specialist	\$120
<b>Archaeologist III</b>	<b>\$110</b>
Archaeologist II	\$105
Archaeologist I	\$100
<b>Biologist III</b>	<b>\$120</b>
Biologist II	\$110
Biologist I	\$105
Sr. Graphic Designer	\$105
<b>Graphic Designer II</b>	<b>\$100</b>
Graphic Designer I	\$95
Office Administrator	\$100
Administrative Assistant III	\$90
Administrative Assistant II	\$85
<b>Administrative Assistant I</b>	<b>\$80</b>

Direct Costs	
Postage/Overnight Mail	Actual cost + 15%
Courier Charges	Actual cost + 15%
Mileage	Federal Rate - currently \$0.55 per mile + 15%
Other Direct Costs	Actual cost + 15%
In-house Copying Charges:	
Black & White	\$0.10 per page + 15%
Color	\$1 per page + 15%
CD duplication w/label & case	\$2.50 each + 15%

# EXHIBIT C - SCOPE OF WORK

## Project Understanding

The **Ascension Heights Subdivision Project (Proposed Project)** entails a request by the project proponent for the County of San Mateo to approve subdivision of six parcels on 21.13 acres into 21 lots for development of 19 single-family residences with the remaining 2 lots (approximately 7.81-acres) maintained as a conservation area. The project site is located adjacent to Ascension Drive and Bel Aire Road in unincorporated San Mateo County, approximately 0.87 miles north east of Highway 280 and 0.51 miles west of highway 92. Potable water would be provided by connection to the Mid-Peninsula Water District and wastewater collection would be provided by the Crystal Springs Sanitation District with treatment at the City of San Mateo Wastewater Treatment Plant. Development of the 19 subdivided lot into single-family residences would require 40,920 cubic yards of grading, of which 28,270 cubic yards would require exportation from the site. Accordingly, the project applicant also requires a grading permit from the County. Based on the size of the development, a Water Supply Assessment is not required for the Proposed Project. One significant consideration is the Cease and Desist Order (CDO) issued by the San Francisco Bay Regional Water Quality Control Board to the City of San Mateo, town of Hillsborough, and Crystal Springs County Sanitation District. The CDO was issued as a result of high infiltration rates of non wastewater during wet weather into the wastewater conveyance system resulting in associated decreases in sewage conveyance capacity which lead to unregulated releases of wastewater to surface waters. This issue will be addressed in the Draft EIR.

The Proposed Project is a re-design of a previous project that was denied by the San Mateo County Planning Commission in 2009. A Draft Environmental Impact Report (Draft EIR) and Final Environmental Impact Report (Final EIR) were prepared for the previously proposed project. The scope of services will utilize, to the extent feasible, existing information from the previous environmental process to provide a Revised EIR that meets the current CEQA guidelines as well as current legal precedent for the analysis of environmental impacts developed through CEQA case law.

## Scope of Services

### *Program Description*

The overall objective and focus of the work plan outlined below is the efficient preparation of a Revised EIR that meets the legal requirements of a complete, adequate, and objective statement of the Proposed Project's environmental consequences while incorporating background information and analysis prepared during the previous EIR process to the extent feasible and reasonable in a cost effective manner. The resulting Revised EIR document will provide a concise, integrated source of information for the public, county decision makers, and other permitting agencies including the California Department of Fish and Game, U.S. Army Corps of Engineers, and the Regional Water Quality Control Board.

## *County Direction*

AES works as an extension of County staff. Our Project Manager would take direction from the assigned County Project Manager. In this role, AES will pro-actively assist with meeting the stated project objectives by maintaining an up-to-date schedule that indicates deliverable due dates and responsible parties. AES has enjoyed similar working relationships with a variety of federal, state, and municipal agencies.

## *Proposed Course of Action*

**Task 1: Kick-Off Meeting, Project Initiation and Information Review.** AES will meet with the County to establish lines of communication, determine the nature and format of the document to be prepared, and obtain relevant documentation and project details. Following this meeting, AES will review all project documentation and related planning materials, including the additional information for the previous EIR that may not have been provided during development of this Scope of Work, and available planning documents including General Plan materials, utility master plans, the County's subdivision regulations, tree regulations, and the Countywide Transportation Plan. Following this review, AES will develop a final project schedule and work plan that meets the needs of the County.

**Deliverables:** AES will prepare a final work plan and schedule to be distributed to the project team via email within five (5) days of the project initiation meeting.

**Task 2: Initial Study, NOP and Scoping.** Following the project initiation meeting, AES will prepare a draft Initial Study (IS) that includes a checklist consistent with Appendix G of the CEQA Guidelines and County guidance. The IS will be used to screen nonsignificant environmental issues from further consideration within the EIR. Following completion of the IS, AES will prepare a Notice of Preparation (NOP). Flexibility will be built into the NOP in anticipation of minor adjustments to project layout and design. This Scope of Work assumes that the County will coordinate circulation of the IS/NOP to the public. AES's Sacramento Office is located mere blocks from the State Clearinghouse and can readily deliver the IS/NOP in a cost effective manner. AES will attend and provide environmental expertise at one public town hall/scoping meeting during the 30-day public review period starting with release of the NOP. It is assumed that the County will be responsible for reserving an appropriate venue for the meeting. AES shall prepare up to 4 poster board exhibits for the public town hall/scoping meeting.

**Deliverables:** AES will provide the County with an electronic version of the IS. AES will revise the IS based on a comprehensive set of comments received on the electronic version from the County. The IS will be included as an appendix to the Administrative Draft EIR. AES will provide an electronic copy of the draft NOP to the County for review. AES will revise the NOP based on a comprehensive set of comments received on the electronic version from the County. AES will provide electronic copies of the proposed poster board exhibits prior to the public town hall/scoping meeting for approval.

**Task 3: Administrative Draft Revised EIR Preparation.** AES will conduct field studies and analysis as necessary to prepare an Administrative Draft EIR (ADEIR) in accordance with the State CEQA Guidelines, and relevant case law. AES will review the results of the IS and scoping comments submitted during the NOP comment period to focus the EIR analysis on those issues that are identified as potentially significant. AES will prepare a summary list of relevant issues to be addressed within the project analysis and consult with the County regarding any revisions to the scope of EIR services, if necessary. Given the nature of the Proposed Project, AES anticipates the EIR will be rather comprehensive, with sections analyzing the direct, indirect, and cumulative effects associated with each of the following issue areas:

- Aesthetics
- Agricultural Resources
- Air Quality and Greenhouse Gases
- Biological Resources
- Cultural Resources
- Geology and Soils
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population and Housing
- Public Services
- Recreation
- Utilities and Service Systems
- Transportation and Traffic

As Lead Agency, the County will make the final determination regarding the content of the EIR. Upon award of the contract, AES and the County would consider each issue area and draft a more detailed work plan that clearly outlines the expectations of the County and the obligations of AES.

**Deliverables:** AES will provide the County with a total of three (3) bound hardcopies and one (1) CD copy in color PDF format of the ADEIR.

### *ADEIR Contents*

Executive Summary. This section will provide an overview of the Draft EIR (DEIR) and include a summary table of all identified environmental effects, mitigation, and the significance level of impacts before and after mitigation.

Introduction. This section will explain the applicability of CEQA to the Proposed Project, describes the CEQA public review process, summarizes significant issues raised during the scoping process, and outlines the organization of the EIR.

Project Description. This section will present the background of the Proposed Project and identify the County's objectives in pursuing the project. AES will incorporate detailed project information and exhibits provided by the Applicant and County to describe each component of the Proposed Project in sufficient detail to enable identification of the largest envelope of potential environmental impacts. All anticipated approvals, permits, and other actions that will rely on the EIR will be identified.

Environmental Setting and Analysis. Considered the heart of the EIR, this section will provide a separate subsection for each environmental issue area in which a potentially significant impact was identified during the IS and scoping process. Each issue area subsection will discuss the existing setting, regulatory framework, analysis methods and thresholds, anticipated project-related impacts, and recommended mitigation measures to reduce or avoid adverse effects.

Cumulative Impacts. AES will assess the cumulative impacts of the Proposed Project in connection with other reasonably foreseeable projects and build-out of the County's General Plan. If available, the cumulative analysis will also consider growth projections anticipated in the County's on-going General Plan Update. AES will work with the County and relevant agencies to develop a list of relevant projects and define the geographical scope of the cumulative analysis. Cumulative analysis will cover each issue area addressed under the Environmental Setting and Analysis section of the EIR. Anticipated project-related cumulative impacts will be identified and mitigation measures will be recommended to reduce or avoid adverse effects.

Project Alternatives. In accordance with CEQA Guidelines Section 15126.6, AES will work with the County and Applicant to develop up to four (4) alternatives that could feasibly attain most of the basic objectives of the Proposed Project and would substantially lessen one or more of the project's significant environmental effects. The following alternatives may be considered as part of this process, although it is anticipated that one or more may be eliminated from detailed consideration due to the increased potential for environmental impacts:

1. No Project Alternative. As required by CEQA, one of the alternatives will be a No Project Alternative. This alternative will assume that the Proposed Project would not occur. While it is anticipated that some environmental impacts would be reduced, the basic objectives of the project would not be accomplished and may result in greater effects associated with water quality and noncompliance with permit requirements.
2. Reduced Footprint Alternative. AES will work with the County to identify a mitigated project footprint alternative within the boundaries of the project site. It is anticipated that a reconfiguration of land uses and clustering of high density residential development would accomplish the goals of this alternative.
3. Reduced Density Alternative. AES will work with the County to define a reduced density alternative that would result in fewer residents on the project site, and thus fewer demands on public utilities and infrastructure.

According to CEQA Guidelines Section 15126.6(d), “the significant effects of an alternative shall be discussed, but in less detail than the significant effects of the project as proposed.” The assessment of project alternatives will be consistent with this requirement by presenting a sufficient amount of detail necessary to afford decision makers with a reasoned choice. In most cases, environmental analyses conducted for the Proposed Project will be applicable to alternative development scenarios. Qualitative analysis of air quality and noise impacts associated with project alternatives will be conducted.

### *Issue Area Analysis and Assumptions*

Aesthetics. Development of the Proposed Project would alter the visual character of the project site from open space to urban; however, the surrounding areas consist of housing developments of similar density and therefore impacts are anticipated to be less than significant. Using visual representations of the project to be provided by the Applicant and existing analysis from the 2009 EIR to the extent possible, AES will complete the following tasks to determine the level of potential impacts and the need for mitigation:

- Review the relevant visual quality standards contained in the County’s General Plan and consider the applicability of planning policies and ordinances related to aesthetics.
- Conduct reconnaissance field studies to assess the visual character of the project site and surrounding public view areas. Document existing visual conditions on the project site through photographs and detailed descriptions.
- Incorporate the existing three dimensional visual design exhibits of the proposed facilities prepared by Lea and Braze Engineering, Inc. for the Applicant into site and aerial photographs of the project site to assess impacts to aesthetics and viewsheds of the project region.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the aesthetics section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts and ensure consistency with relevant visual quality standards of the County’s General Plan.

Air Quality. Development of the Proposed Project would result in short-term emissions and fugitive dust during the construction phase and long-term emissions associated with vehicle traffic. AES will complete the following tasks to determine the level of potential air quality impacts and the need for mitigation.

- Review relevant local/regional air quality standards for the project area, including those issued by the Bay Area Air Quality Management District (AQMD) and California Air Resources Board (CARB).
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including the Federal Clean Air Act and California Clean Air Act.
- Document existing sources of air pollution and identify sensitive receptors that may be affected by development of the Proposed Project.
- AES will conduct a HRA for the Proposed Project. The assessment will use accepted County or Air District protocols to determine the necessity for dispersion modeling. AES will use either AeMOD

or CAL3QHCR modeling software to estimate concentrations at defined receptor locations and will consult with the Air District and County to determine the appropriate level of analysis.

- Identify short-term air quality impacts from construction emissions using CARB-approved URBEMIS- modeling software. In order to estimate construction emissions, AES will coordinate with the County and Applicant to acquire information regarding the nature of construction activities, types of equipment that will likely be used, and the anticipated total area of disturbance.
- Identify long-term regional air quality impacts from mobile and area source emissions using CARB approved URBEMIS modeling software. This analysis will include quantification of criteria air pollutants identified in the local air quality management plans and shall be conducted according to district methodologies. Mobile source emissions will be estimated using vehicle trip generation and distribution information provided in the traffic study prepared by RKH.
- Quantify greenhouse gas emissions as recommended within the recent amendments to the CEQA Guidelines. In accordance with this guidance, AES will provide a qualitative, performance based approach to reducing impacts. This effort will be closely coordinated within the County's General Plan Update Process to ensure consistent methodology and thresholds are being applied.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the air quality section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts from both construction and operation of the Proposed Project. Modeling runs will be included as an appendix to the EIR.

Agricultural Resources. The Proposed Project would not result in the conversion of prime agricultural land. Additionally, no Williamson Act contracts are held on the subject parcels. AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process. Should it be determined that Agricultural Resources should be included within the EIR, AES will complete the following tasks using the existing analysis from the 2009 EIR to the extent possible to determine the level of potential impacts to agricultural resources and the need for mitigation:

- Review the relevant local policies concerning the protection of farmlands, including those contained in the County General Plan and General Plan Update.
- Describe and map the important agricultural soils in the project area including Prime Farmland, Farmland of Statewide Importance and Unique Farmland.
- Review information on existing agricultural resource in the region and current urbanization trends.
- AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process.

Biological Resources. Development of the Proposed Project has the potential to impact special-status species and other biological resources, including the endangered Mission Blue Butterfly. This scope of work does not provide for protocol-level biological surveys or permitting. AES will complete the following tasks to determine the level of potential biological impacts and the need for mitigation:

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Federal Endangered Species Act, Fish and Wildlife Coordination Act, Migratory Bird Treaty Act, Clean Water Act (Sections 401 and 404), Magnuson Fisheries-Stevens Fishery

Conservation and Management Act, California Endangered Species Act, California Fish and Game Code, and Porter-Cologne Water Quality Control Act.

- Review existing information related to biological resources included within the Biological Resources Assessment prepared for the 2009 EIR.
- Conduct an updated query of the California Natural Diversity Database/RareFind, California Native Plant Society's Electronic Inventory, and the California Wildlife-Habitat Relationships database, and obtain current special-status species lists for the project area from the U.S. Fish and Wildlife Service (USFWS).
- Conduct a biological field survey of the project site to establish the potential for occurrences of special-status species or critical habitat and confirm the findings of the Biological Resources Assessment prepared by the Applicant.
- Incorporate information from existing studies and findings into the biological resources section of the EIR and recommend avoidance or mitigation measures to reduce any potentially significant impacts. In coordination with the County, AES will informally consult with USFWS and the California Department of Fish and Game to refine mitigation measures and meet regulatory requirements. This coordination will promote an efficient environmental review process for the Proposed Project.

Cultural Resources. Development of the Proposed Project could result in adverse impacts to previously documented, newly identified, or inadvertently discovered cultural resources. Preliminary site reconnaissance indicates that the project site has been substantially disturbed from agricultural activities; however, impacts to unanticipated archaeological resources discovered during construction are always a possibility. AES will complete the following tasks during preparation of the cultural resources section of the EIR.

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: CEQA Guidelines 15064.5 and PRC 21083.2, SB-18 – Tribal Consultation (required for General Plan Amendment), Section 106 of the National Historic Preservation Act (required for 404 permits)
- Conduct an updated records search at the Northwest Information Center of the California Historical Resources Information System.
- Request a sacred lands search and stakeholders list from the Native American Heritage Commission (NAHC). AES will send preliminary consultation letters to all Native American stakeholders identified by the NAHC.
- Conduct an intensive Phase-I pedestrian survey of the project site. The survey will include recordation of any newly identified sites on appropriate DPR forms. Records of previously identified sites will be updated if necessary. This scope of work assumes that no more than two relatively simple resources will require recordation or updating. Evaluation of site significance is not included in the enclosed cost estimate. If it is determined that identified site(s) need to be evaluated, AES will provide a detailed scope of work and cost estimate for this work.

# EXHIBIT C - SCOPE OF WORK

## Project Understanding

The **Ascension Heights Subdivision Project (Proposed Project)** entails a request by the project proponent for the County of San Mateo to approve subdivision of six parcels on 21.13 acres into 21 lots for development of 19 single-family residences with the remaining 2 lots (approximately 7.81-acres) maintained as a conservation area. The project site is located adjacent to Ascension Drive and Bel Aire Road in unincorporated San Mateo County, approximately 0.87 miles north east of Highway 280 and 0.51 miles west of highway 92. Potable water would be provided by connection to the Mid-Peninsula Water District and wastewater collection would be provided by the Crystal Springs Sanitation District with treatment at the City of San Mateo Wastewater Treatment Plant. Development of the 19 subdivided lot into single-family residences would require 40,920 cubic yards of grading, of which 28,270 cubic yards would require exportation from the site. Accordingly, the project applicant also requires a grading permit from the County. Based on the size of the development, a Water Supply Assessment is not required for the Proposed Project. One significant consideration is the Cease and Desist Order (CDO) issued by the San Francisco Bay Regional Water Quality Control Board to the City of San Mateo, town of Hillsborough, and Crystal Springs County Sanitation District. The CDO was issued as a result of high infiltration rates of non wastewater during wet weather into the wastewater conveyance system resulting in associated decreases in sewage conveyance capacity which lead to unregulated releases of wastewater to surface waters. This issue will be addressed in the Draft EIR.

The Proposed Project is a re-design of a previous project that was denied by the San Mateo County Planning Commission in 2009. A Draft Environmental Impact Report (Draft EIR) and Final Environmental Impact Report (Final EIR) were prepared for the previously proposed project. The scope of services will utilize, to the extent feasible, existing information from the previous environmental process to provide a Revised EIR that meets the current CEQA guidelines as well as current legal precedent for the analysis of environmental impacts developed through CEQA case law.

## Scope of Services

### *Program Description*

The overall objective and focus of the work plan outlined below is the efficient preparation of a Revised EIR that meets the legal requirements of a complete, adequate, and objective statement of the Proposed Project's environmental consequences while incorporating background information and analysis prepared during the previous EIR process to the extent feasible and reasonable in a cost effective manner. The resulting Revised EIR document will provide a concise, integrated source of information for the public, county decision makers, and other permitting agencies including the California Department of Fish and Game, U.S. Army Corps of Engineers, and the Regional Water Quality Control Board.

## *County Direction*

AES works as an extension of County staff. Our Project Manager would take direction from the assigned County Project Manager. In this role, AES will pro-actively assist with meeting the stated project objectives by maintaining an up-to-date schedule that indicates deliverable due dates and responsible parties. AES has enjoyed similar working relationships with a variety of federal, state, and municipal agencies.

## *Proposed Course of Action*

**Task 1: Kick-Off Meeting, Project Initiation and Information Review.** AES will meet with the County to establish lines of communication, determine the nature and format of the document to be prepared, and obtain relevant documentation and project details. Following this meeting, AES will review all project documentation and related planning materials, including the additional information for the previous EIR that may not have been provided during development of this Scope of Work, and available planning documents including General Plan materials, utility master plans, the County's subdivision regulations, tree regulations, and the Countywide Transportation Plan. Following this review, AES will develop a final project schedule and work plan that meets the needs of the County.

**Deliverables:** AES will prepare a final work plan and schedule to be distributed to the project team via email within five (5) days of the project initiation meeting.

**Task 2: Initial Study, NOP and Scoping.** Following the project initiation meeting, AES will prepare a draft Initial Study (IS) that includes a checklist consistent with Appendix G of the CEQA Guidelines and County guidance. The IS will be used to screen nonsignificant environmental issues from further consideration within the EIR. Following completion of the IS, AES will prepare a Notice of Preparation (NOP). Flexibility will be built into the NOP in anticipation of minor adjustments to project layout and design. This Scope of Work assumes that the County will coordinate circulation of the IS/NOP to the public. AES's Sacramento Office is located mere blocks from the State Clearinghouse and can readily deliver the IS/NOP in a cost effective manner. AES will attend and provide environmental expertise at one public town hall/scoping meeting during the 30-day public review period starting with release of the NOP. It is assumed that the County will be responsible for reserving an appropriate venue for the meeting. AES shall prepare up to 4 poster board exhibits for the public town hall/scoping meeting.

**Deliverables:** AES will provide the County with an electronic version of the IS. AES will revise the IS based on a comprehensive set of comments received on the electronic version from the County. The IS will be included as an appendix to the Administrative Draft EIR. AES will provide an electronic copy of the draft NOP to the County for review. AES will revise the NOP based on a comprehensive set of comments received on the electronic version from the County. AES will provide electronic copies of the proposed poster board exhibits prior to the public town hall/scoping meeting for approval.

**Task 3: Administrative Draft Revised EIR Preparation.** AES will conduct field studies and analysis as necessary to prepare an Administrative Draft EIR (ADEIR) in accordance with the State CEQA Guidelines, and relevant case law. AES will review the results of the IS and scoping comments submitted during the NOP comment period to focus the EIR analysis on those issues that are identified as potentially significant. AES will prepare a summary list of relevant issues to be addressed within the project analysis and consult with the County regarding any revisions to the scope of EIR services, if necessary. Given the nature of the Proposed Project, AES anticipates the EIR will be rather comprehensive, with sections analyzing the direct, indirect, and cumulative effects associated with each of the following issue areas:

- Aesthetics
- Agricultural Resources
- Air Quality and Greenhouse Gases
- Biological Resources
- Cultural Resources
- Geology and Soils
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population and Housing
- Public Services
- Recreation
- Utilities and Service Systems
- Transportation and Traffic

As Lead Agency, the County will make the final determination regarding the content of the EIR. Upon award of the contract, AES and the County would consider each issue area and draft a more detailed work plan that clearly outlines the expectations of the County and the obligations of AES.

**Deliverables:** AES will provide the County with a total of three (3) bound hardcopies and one (1) CD copy in color PDF format of the ADEIR.

### *ADEIR Contents*

Executive Summary. This section will provide an overview of the Draft EIR (DEIR) and include a summary table of all identified environmental effects, mitigation, and the significance level of impacts before and after mitigation.

Introduction. This section will explain the applicability of CEQA to the Proposed Project, describes the CEQA public review process, summarizes significant issues raised during the scoping process, and outlines the organization of the EIR.

Project Description. This section will present the background of the Proposed Project and identify the County's objectives in pursuing the project. AES will incorporate detailed project information and exhibits provided by the Applicant and County to describe each component of the Proposed Project in sufficient detail to enable identification of the largest envelope of potential environmental impacts. All anticipated approvals, permits, and other actions that will rely on the EIR will be identified.

Environmental Setting and Analysis. Considered the heart of the EIR, this section will provide a separate subsection for each environmental issue area in which a potentially significant impact was identified during the IS and scoping process. Each issue area subsection will discuss the existing setting, regulatory framework, analysis methods and thresholds, anticipated project-related impacts, and recommended mitigation measures to reduce or avoid adverse effects.

Cumulative Impacts. AES will assess the cumulative impacts of the Proposed Project in connection with other reasonably foreseeable projects and build-out of the County's General Plan. If available, the cumulative analysis will also consider growth projections anticipated in the County's on-going General Plan Update. AES will work with the County and relevant agencies to develop a list of relevant projects and define the geographical scope of the cumulative analysis. Cumulative analysis will cover each issue area addressed under the Environmental Setting and Analysis section of the EIR. Anticipated project-related cumulative impacts will be identified and mitigation measures will be recommended to reduce or avoid adverse effects.

Project Alternatives. In accordance with CEQA Guidelines Section 15126.6, AES will work with the County and Applicant to develop up to four (4) alternatives that could feasibly attain most of the basic objectives of the Proposed Project and would substantially lessen one or more of the project's significant environmental effects. The following alternatives may be considered as part of this process, although it is anticipated that one or more may be eliminated from detailed consideration due to the increased potential for environmental impacts:

1. No Project Alternative. As required by CEQA, one of the alternatives will be a No Project Alternative. This alternative will assume that the Proposed Project would not occur. While it is anticipated that some environmental impacts would be reduced, the basic objectives of the project would not be accomplished and may result in greater effects associated with water quality and noncompliance with permit requirements.
2. Reduced Footprint Alternative. AES will work with the County to identify a mitigated project footprint alternative within the boundaries of the project site. It is anticipated that a reconfiguration of land uses and clustering of high density residential development would accomplish the goals of this alternative.
3. Reduced Density Alternative. AES will work with the County to define a reduced density alternative that would result in fewer residents on the project site, and thus fewer demands on public utilities and infrastructure.

According to CEQA Guidelines Section 15126.6(d), “the significant effects of an alternative shall be discussed, but in less detail than the significant effects of the project as proposed.” The assessment of project alternatives will be consistent with this requirement by presenting a sufficient amount of detail necessary to afford decision makers with a reasoned choice. In most cases, environmental analyses conducted for the Proposed Project will be applicable to alternative development scenarios. Qualitative analysis of air quality and noise impacts associated with project alternatives will be conducted.

### *Issue Area Analysis and Assumptions*

Aesthetics. Development of the Proposed Project would alter the visual character of the project site from open space to urban; however, the surrounding areas consist of housing developments of similar density and therefore impacts are anticipated to be less than significant. Using visual representations of the project to be provided by the Applicant and existing analysis from the 2009 EIR to the extent possible, AES will complete the following tasks to determine the level of potential impacts and the need for mitigation:

- Review the relevant visual quality standards contained in the County’s General Plan and consider the applicability of planning policies and ordinances related to aesthetics.
- Conduct reconnaissance field studies to assess the visual character of the project site and surrounding public view areas. Document existing visual conditions on the project site through photographs and detailed descriptions.
- Incorporate the existing three dimensional visual design exhibits of the proposed facilities prepared by Lea and Braze Engineering, Inc. for the Applicant into site and aerial photographs of the project site to assess impacts to aesthetics and viewsheds of the project region.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the aesthetics section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts and ensure consistency with relevant visual quality standards of the County’s General Plan.

Air Quality. Development of the Proposed Project would result in short-term emissions and fugitive dust during the construction phase and long-term emissions associated with vehicle traffic. AES will complete the following tasks to determine the level of potential air quality impacts and the need for mitigation.

- Review relevant local/regional air quality standards for the project area, including those issued by the Bay Area Air Quality Management District (AQMD) and California Air Resources Board (CARB).
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including the Federal Clean Air Act and California Clean Air Act.
- Document existing sources of air pollution and identify sensitive receptors that may be affected by development of the Proposed Project.
- AES will conduct a HRA for the Proposed Project. The assessment will use accepted County or Air District protocols to determine the necessity for dispersion modeling. AES will use either AeMOD

or CAL3QHCR modeling software to estimate concentrations at defined receptor locations and will consult with the Air District and County to determine the appropriate level of analysis.

- Identify short-term air quality impacts from construction emissions using CARB-approved URBEMIS- modeling software. In order to estimate construction emissions, AES will coordinate with the County and Applicant to acquire information regarding the nature of construction activities, types of equipment that will likely be used, and the anticipated total area of disturbance.
- Identify long-term regional air quality impacts from mobile and area source emissions using CARB approved URBEMIS modeling software. This analysis will include quantification of criteria air pollutants identified in the local air quality management plans and shall be conducted according to district methodologies. Mobile source emissions will be estimated using vehicle trip generation and distribution information provided in the traffic study prepared by RKH.
- Quantify greenhouse gas emissions as recommended within the recent amendments to the CEQA Guidelines. In accordance with this guidance, AES will provide a qualitative, performance based approach to reducing impacts. This effort will be closely coordinated within the County's General Plan Update Process to ensure consistent methodology and thresholds are being applied.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the air quality section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts from both construction and operation of the Proposed Project. Modeling runs will be included as an appendix to the EIR.

Agricultural Resources. The Proposed Project would not result in the conversion of prime agricultural land. Additionally, no Williamson Act contracts are held on the subject parcels. AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process. Should it be determined that Agricultural Resources should be included within the EIR, AES will complete the following tasks using the existing analysis from the 2009 EIR to the extent possible to determine the level of potential impacts to agricultural resources and the need for mitigation:

- Review the relevant local policies concerning the protection of farmlands, including those contained in the County General Plan and General Plan Update.
- Describe and map the important agricultural soils in the project area including Prime Farmland, Farmland of Statewide Importance and Unique Farmland.
- Review information on existing agricultural resource in the region and current urbanization trends.
- AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process.

Biological Resources. Development of the Proposed Project has the potential to impact special-status species and other biological resources, including the endangered Mission Blue Butterfly. This scope of work does not provide for protocol-level biological surveys or permitting. AES will complete the following tasks to determine the level of potential biological impacts and the need for mitigation:

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Federal Endangered Species Act, Fish and Wildlife Coordination Act, Migratory Bird Treaty Act, Clean Water Act (Sections 401 and 404), Magnuson Fisheries-Stevens Fishery

Conservation and Management Act, California Endangered Species Act, California Fish and Game Code, and Porter-Cologne Water Quality Control Act.

- Review existing information related to biological resources included within the Biological Resources Assessment prepared for the 2009 EIR.
- Conduct an updated query of the California Natural Diversity Database/RareFind, California Native Plant Society's Electronic Inventory, and the California Wildlife-Habitat Relationships database, and obtain current special-status species lists for the project area from the U.S. Fish and Wildlife Service (USFWS).
- Conduct a biological field survey of the project site to establish the potential for occurrences of special-status species or critical habitat and confirm the findings of the Biological Resources Assessment prepared by the Applicant.
- Incorporate information from existing studies and findings into the biological resources section of the EIR and recommend avoidance or mitigation measures to reduce any potentially significant impacts. In coordination with the County, AES will informally consult with USFWS and the California Department of Fish and Game to refine mitigation measures and meet regulatory requirements. This coordination will promote an efficient environmental review process for the Proposed Project.

Cultural Resources. Development of the Proposed Project could result in adverse impacts to previously documented, newly identified, or inadvertently discovered cultural resources. Preliminary site reconnaissance indicates that the project site has been substantially disturbed from agricultural activities; however, impacts to unanticipated archaeological resources discovered during construction are always a possibility. AES will complete the following tasks during preparation of the cultural resources section of the EIR.

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: CEQA Guidelines 15064.5 and PRC 21083.2, SB-18 – Tribal Consultation (required for General Plan Amendment), Section 106 of the National Historic Preservation Act (required for 404 permits)
- Conduct an updated records search at the Northwest Information Center of the California Historical Resources Information System.
- Request a sacred lands search and stakeholders list from the Native American Heritage Commission (NAHC). AES will send preliminary consultation letters to all Native American stakeholders identified by the NAHC.
- Conduct an intensive Phase-I pedestrian survey of the project site. The survey will include recordation of any newly identified sites on appropriate DPR forms. Records of previously identified sites will be updated if necessary. This scope of work assumes that no more than two relatively simple resources will require recordation or updating. Evaluation of site significance is not included in the enclosed cost estimate. If it is determined that identified site(s) need to be evaluated, AES will provide a detailed scope of work and cost estimate for this work.

- Assist the County with SB-18 consultation. SB-18 assistance will include identification of stakeholders, provision of invitation to consult language, and attendance at up to two meetings with tribal representatives.
- Conduct all surveys and records searches in compliance with Section 106 of National Historic Preservation Act in the event that federal permitting is required.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the cultural resources section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts. This Scope of Work does not provide for testing or data recovery of any identified archaeological sites.

Geology and Soils. Development of the Proposed Project has the potential to result in soil erosion or subject people or property to geologic or seismic risks. AES is teaming with Michelucci and Associates to conduct an Updated Geotechnical Study to supplement the geotechnical study they prepared for the 2009 EIR. AES will complete the following tasks during preparation of the geology and soils section of the EIR:

- Review the relevant local and regional planning policies and ordinances related to geology, soils and seismic hazards within the project area, including those contained in the County's General Plan.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Soil and Water Conservation Act, National Earthquake Hazards Reduction Program, Alquist-Priolo Earthquake Fault Zoning Act, Seismic Hazards Mapping Act, and California Building Standards Code.
- Identify soils types within the project area based on a review of U.S. Department of Agriculture soils surveys and field investigations to estimate the potential for erosion, settlement, and liquefaction; however, it is assumed that a geotechnical report or other appropriate analysis shall be conducted that determines the shrink/swell potential and stability of the soil to support the proposed facilities prior to construction.
- Review regional/local earthquake fault and seismic hazard maps to determine the potential for seismic related hazards.
- Incorporate findings of the Geotechnical Study prepared by Michelucci and Associates and existing analysis from the 2009 EIR to the extent possible into the geology and soils section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Hazards and Hazardous Materials. Development of the Proposed Project may subject people to hazardous materials or hazards. The majority of the project site has been formerly used for agricultural purposes. AES will complete the following tasks during preparation of the Hazards/Hazardous Materials section of the EIR:

- Review the relevant local and regional planning policies and ordinances related to hazards and hazardous materials within the project area, including those contained in the County's General Plan.

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Resources Conservation and Recovery Act, Hazardous and Solid Waste Management Acts, and Comprehensive Environmental Response, Compensation, and Liability Act.
- Request a database search from Environmental Data Services to identify whether the project site is listed on various local, state, or federal hazardous materials databases. AES will also search online database resources regarding facilities or sites identified as meeting the “Cortese List” requirements pursuant to Government Code Section 65962.5.
- AES will research historic land usage within and adjacent to the project site, including review of historic topographic maps and aerial photographs.
- AES will incorporate findings and existing analysis from the 2009 EIR to the extent possible into the hazards and hazardous materials section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Hydrology and Water Quality. Development of the Proposed Project would alter the existing drainage patterns on the project site during both construction and operation, potentially impacting run-off quantity and quality. AES understands that Lea and Braze have already completed an updated hydrological evaluation of the project site to assess drainage impacts associated with the development of impervious surfaces on the project site. AES will complete the following tasks during preparation of the Hydrology and Water Quality Section of the EIR:

- Review existing information concerning water quality in the project area and consider the applicability of relevant local/regional planning policies and ordinances.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including the Clean Water Act and Porter-Cologne Water Quality Act.
- Identify flood hazards on the site or in the immediate project area through Review of FEMA Flood Insurance maps, the proposed flood protection/prevention measures of the project (if needed), and determine residual effects on localized or downstream flooding.
- Peer review drainage plans, estimates of storm water volumes, and existing system capacities provided to AES by Lea and Braze during the hydrological study, the County and/or the Applicant.
- Using existing information, identify the general types and sources of water quality changes that may result from the proposed development. Evaluate potential impacts of runoff from the project site on the quality of receiving waters.
- Discuss the need to apply for an NPDES permit for construction activities. Identify guidelines and policies of the SFBRWQCB, U.S. Environmental Protection Agency, and County plans regarding water quality impacts from storm water runoff.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Hydrology and Water Quality section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Land Use and Planning. The Proposed Project would result in the subdivision of the project site for the development of 19 single-family residential units. Implementation of the Proposed Project must be

considered in light of existing policies included within the County's General Plan and General Plan Update. Additionally, the Proposed Project will introduce new land uses that may be incompatible with existing or planned land uses on adjacent properties. Based on an initial review of the General Plan and Land Use designations for the project site, the Proposed Project is consistent with the land use planning documents governing development on the project site and the density of development is consistent with zoning designations. Accordingly, AES anticipates that impacts to Land Use and Planning will be less than significant and no mitigation will be required. To ensure a complete analysis is provided, AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted land use studies associated with the project area and consider the applicability of relevant local/regional planning policies and ordinances.
- Identify existing, approved, and proposed land use and zoning designations within and surrounding the project site.
- Consider the consistency of the Proposed Project with existing applicable planning documents, and include "planning consistency matrix" as an appendix to the EIR.
- Assess potential long-term compatibility issues, as well as short-term issues associated with phased development and non-conforming land uses.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Land Use and Planning section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Noise. Development of the Proposed Project would result in a short-term increase in noise and vibration during the construction phase and would result in long-term noise increases related to traffic and operational activities that may impact sensitive receptors. AES will conduct a noise assessment of the project site and incorporate the analysis and conclusions into the Noise Section of the EIR. AES will complete the following task to determine the level of potential impacts and the need for mitigation.

- Existing Noise Levels: Conduct a detailed ambient noise survey to quantify existing noise conditions at the project site and at the nearest potentially affected noise-sensitive land uses. The survey will consist of continuous and short-term noise level measurements at as many locations deemed necessary to thoroughly identify existing noise conditions for the project area which will include traffic noise from State Route 280 and 92. To the extent that information contained in the 2009 EIR is still relevant, AES will make use of it.
- Prepare Technical Report in Support of the EIR Noise Section that will contain the results of the previous task in the above-described scope of work, as well as graphics showing noise measurement locations and potential noise mitigation locations as appropriate. The report will be included as an appendix to the EIR. AES will incorporate existing analysis from the 2009 EIR to the extent possible.

Public Services and Recreation: Development of the Proposed Project would result in an increased demand for public services and recreation, including public schools, law enforcement, and fire protection. Additionally, the increase in population as a result of the project will result in increased use of County and

regional recreational facilities. AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted studies associated with the project site and consider the applicability of relevant local/regional planning policies and ordinances..
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including:
  - Uniform Fire Code
  - California Health and Safety Code
- AES will update the public service provided questionnaires provided Appendix C of the 2009 Draft EIR. AES will contact local service providers, including the Sheriff's Department, Fire Department, County Parks Department, County Public Libraries, and School Districts to determine existing service levels in the project area and need for additional personnel, equipment, and facilities.
- Estimate the new service demands resulting from the development of the Proposed Project, including the increase in student enrollment, law enforcement demands, fire protection demands, and use of recreational facilities.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Public Services and Recreation section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Traffic and Circulation: Development of the Proposed Project would result in an increase in local traffic. AES is teaming with RKH for the preparation of a traffic analysis and study for the Proposed Project to determine the potential for adverse effects on traffic circulation and identify appropriate traffic improvements. AES will complete the following tasks during preparation of the transportation/traffic section of the EIR.

- Incorporate findings of the traffic impact analysis into the Transportation and Circulation section of the EIR.
- Assess potential impacts associated with pedestrian, bicycle, and public transportation, and recommend appropriate mitigation measures.
- Discuss potential short-term impacts associated with construction activities. It is anticipated that mitigation will likely include specific measures to be included within a Traffic Control Plan for construction activities.

Utilities and Service Systems: Development of the Proposed Project would result in an increased demand for public utilities, including potable water, wastewater treatment, drainage facilities, and solid waste services. AES is teaming with NV5, formerly Nolte and Associates to assess the potential impacts to sewer and water conveyance systems. The cost and scope assumes that the level of effort required is to update the analysis within the 2009 EIR and no modeling of conveyance capacities are required. AES will assess the potential impacts to other utility and service systems including solid waste, electricity, and telecommunications. AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted studies associated with the 2009 EIR and consider the applicability of relevant local/regional planning policies and ordinances.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: California Health and Safety Code, Integrated Waste Management Act, Water Management Planning Act, SB 610 – Water Availability Assessment. Based on the number of residential units, a Water Supply Assessment is not required under SB 610, which will be duly noted in the EIR.
- Coordinate with the County’s Public Utilities Department and local service providers to determine existing service levels in the project area.
- Estimate the new service demands resulting from the development of the Proposed Project, including water supply, wastewater, drainage and solid waste.
- Evaluate impacts to wastewater treatment and drainage facilities in light of information provided within NV5’s technical assessment.
- In accordance with thresholds provided in Appendix G of the CEQA Guidelines, evaluate physical environmental impacts resulting from proposed improvements to utility systems, including the any proposed upgrades to Crystal Springs County Special District and San Mateo Wastewater Treatment plant. This task does not include site visits to assess existing conditions of off-site improvements that may be required to update wastewater infrastructure to meet the wastewater demands of the project.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Public Services and Utilities section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

**Task 4: Draft EIR and Public Circulation.** AES will meet with the County to clarify any comments and questions raised during review of the ADEIR. AES will revise the ADEIR based on a single set of comprehensive comments provided by the County. AES will provide an electronic screen check version of the Draft EIR with track changes to the County for review prior to production. Following approval by the County, AES will facilitate preparation of the Notice of Availability (NOA) and public release of the DEIR.

AES technical staff will coordinate and attend one (1) public comment town hall meeting during the 45-day public comment period on the DEIR. AES will provide up to three (3) poster board displays for the meeting. It is assumed that the County will be responsible for reserving an appropriate venue. If desired, a court reporter will be provided by the County.

**Deliverables:** AES will provide the County with ten (10) bound hardcopies one (1) CD copy in color PDF format of the Draft EIR. Fifteen (15) CD copies of the Draft EIR with hardcopies of the Executive Summary will be submitted as required to the State Clearinghouse with the Notice of Availability. AES will provide electronic copies of the proposed poster board exhibits prior to the public town hall meeting for approval.

**Task 5: Final EIR and Mitigation Monitoring and Reporting Plan.** AES will compile comments received from the public and other interested parties during the 45-day public review period for the Draft EIR, and summarize key issues for discussion with the County. AES will meet with County staff to go over the approach for responding to key issues raised during the DEIR public review period. Following this meeting, AES will formulate responses, and make any necessary revisions to the EIR. This Scope of Work assumes a moderate level of effort will be required to respond to comments. A moderate level of effort is considered to be less than 15 comment letters and 50 individual substantive comments that require a response beyond comment noted. The Response to Comments and any refinements to the DEIR text will be incorporated into a “freestanding” Final EIR. AES will prepare a Mitigation Monitoring and Reporting Plan (MMRP) to support the County’s certification of the Final EIR. The MMRP will be referenced within the text of the Final EIR and will be included as an appendix in the final document.

**Deliverables:** AES will provide the County with a total of ten (10) bound hardcopies and one (1) CD copy in PDF format of the Final EIR.

**Task 6: Findings and Final EIR Certification Support.** AES will assist with preparation of the Findings of Fact and Statement of Overriding Considerations. AES will attend/present at one meeting with the Planning Commission, and up to two staff meetings for certification of the Final EIR and Findings and Statement of Overriding Considerations.

**Task 7: Project Management and Meetings.** The AES management team will complete the myriad of small and often unforeseen tasks required to implement the preparation of an EIR. This includes numerous phone calls and emails necessary to facilitate information exchange between the Project Team and jurisdictional agencies, as well as the time required to prepare agendas, meeting minutes, schedules, and other such documents. Under this task, AES will:

- Attend a scoping hearing;
- Participate in up to 3 (3) two-hour project coordination meetings with planning staff at the County offices for the development of the Draft EIR;
- Attend up to two (2) Planning Commission hearings; and
- Participate in up to ten (10) one-hour project related conference calls with members of the project team and jurisdictional agencies.

**Deliverables:** AES will submit monthly status reports to the Project Team via email by the fifth business day of each month. AES will prepare and distribute minutes for each project-related meeting that will outline key decisions and action items.

**AGREEMENT BETWEEN THE COUNTY OF SAN MATEO AND  
ANALYTICAL ENVIRONMENTAL SERVICES**

THIS AGREEMENT, entered into this 7 day of May 2013, by and between the COUNTY OF SAN MATEO, hereinafter called "County," and Analytical Environmental Services, hereinafter called "Contractor."

W I T N E S S E T H:

WHEREAS, pursuant to Government Code, Section 31000, County may contract with independent contractors for the furnishing of such services to or for County or any Department thereof;

WHEREAS, it is necessary and desirable that Contractor be retained for the purpose of preparing an Environmental Impact Report for the proposed Ascensions Heights subdivision project (County File number PLN2002-00517) to be re-circulated.

**NOW, THEREFORE, IT IS HEREBY AGREED BY THE PARTIES HERETO AS FOLLOWS:**

**1. Exhibits and Attachments**

The following exhibits and attachments are included hereto and incorporated by reference herein:

Exhibit A—Services  
Exhibit B—Payments and rates  
Exhibit C—Scope of Work

**2. Services to be performed by Contractor**

In consideration of the payments set forth herein and in Exhibit "B," Contractor shall perform services for County in accordance with the terms, conditions and specifications set forth herein and in Exhibit "A."

**3. Payments**

In consideration of the services provided by Contractor in accordance with all terms, conditions and specifications set forth herein and in Exhibit "A," County shall make payment to Contractor based on the rates and in the manner specified in Exhibit "B." The County reserves the right to withhold payment if the County determines that the quantity or quality of the work performed is unacceptable. In no event shall the County's total fiscal obligation under this Agreement exceed One Hundred Thirteen Thousand Seventy-Five Dollars, \$113,075.

**4. Term and Termination**

Subject to compliance with all terms and conditions, the term of this Agreement shall be from May 9, 2013 through May 9, 2014.

This Agreement may be terminated by Contractor, the Director of Community Development or his/her designee at any time without a requirement of good cause upon thirty (30) days' written notice to the other party.

In the event of termination, all finished or unfinished documents, data, studies, maps, photographs, reports, and materials (hereafter referred to as materials) prepared by Contractor under this Agreement shall become the property of the County and shall be promptly delivered to the County. Upon termination, the Contractor may make and retain a copy of such materials. Subject to availability of funding, Contractor shall be entitled to receive payment for work/services provided prior to termination of the Agreement. Such payment shall be that portion of the full payment which is determined by comparing the work/services completed to the work/services required by the Agreement.

**5. Availability of Funds**

The County may terminate this Agreement or a portion of the services referenced in the Attachments and Exhibits based upon unavailability of Federal, State, or County funds, by providing written notice to Contractor as soon as is reasonably possible after the County learns of said unavailability of outside funding.

**6. Relationship of Parties**

Contractor agrees and understands that the work/services performed under this Agreement are performed as an independent Contractor and not as an employee of the County and that Contractor acquires none of the rights, privileges, powers, or advantages of County employees.

**7. Hold Harmless**

Contractor shall indemnify and save harmless County, its officers, agents, employees, and servants from all claims, suits, or actions of every name, kind, and description, brought for, or on account of: (A) injuries to or death of any person, including Contractor, or (B) damage to any property of any kind whatsoever and to whomsoever belonging, (C) any sanctions, penalties, or claims of damages resulting from Contractor's failure to comply with the requirements set forth in the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and all Federal regulations promulgated thereunder, as amended, or (D) any other loss or cost, including but not limited to that caused by the concurrent active or passive negligence of County, its officers, agents, employees, or servants, resulting from the performance of any work required of Contractor or payments made pursuant to this Agreement, provided that this shall not apply to injuries or damage for which County has been found in a court of competent jurisdiction to be solely liable by reason of its own negligence or willful misconduct.

The duty of Contractor to indemnify and save harmless as set forth herein, shall include the duty to defend as set forth in Section 2778 of the California Civil Code.

County and its officers, agents, employees and servants shall be named as additional insured on any such policies of insurance, which shall also contain a provision that the insurance afforded thereby to the County, its officers, agents, employees and servants shall be primary insurance to the full limits of liability of the policy, and that if the County or its officers and employees have other insurance against the loss covered by such a policy, such other insurance shall be excess insurance only.

In the event of the breach of any provision of this section, or in the event any notice is received which indicates any required insurance coverage will be diminished or canceled, the County of San Mateo at its option, may, notwithstanding any other provision of this Agreement to the contrary, immediately declare a material breach of this Agreement and suspend all further work pursuant to this Agreement.

**10. Compliance with laws; payment of Permits/Licenses**

All services to be performed by Contractor pursuant to this Agreement shall be performed in accordance with all applicable Federal, State, County, and municipal laws, ordinances and regulations, including, but not limited to, the Health Insurance Portability and Accountability Act of 1996 (HIPAA), and the Federal Regulations promulgated thereunder, as amended, and will comply with the Business Associate requirements set forth in Attachment "H," and the Americans with Disabilities Act of 1990, as amended, and Section 504 of the Rehabilitation Act of 1973, as amended and attached hereto and incorporated by reference herein as Attachment "I," which prohibits discrimination on the basis of handicap in programs and activities receiving any Federal or County financial assistance. Such services shall also be performed in accordance with all applicable ordinances and regulations, including, but not limited to, appropriate licensure, certification regulations, provisions pertaining to confidentiality of records, and applicable quality assurance regulations. In the event of a conflict between the terms of this Agreement and State, Federal, County, or municipal law or regulations, the requirements of the applicable law will take precedence over the requirements set forth in this Agreement. Further, Contractor certifies that the Contractor and all of its subcontractors will adhere to all applicable provisions of Chapter 4.106 of the San Mateo County Ordinance Code, which regulates the use of disposable food service ware.

Contractor will timely and accurately complete, sign, and submit all necessary documentation of compliance.

**11. Non-Discrimination and Other Requirements**

- A. *Section 504 applies only to Contractors who are providing services to members of the public.* Contractor shall comply with § 504 of the Rehabilitation Act of 1973, which provides that no otherwise qualified handicapped individual shall, solely by reason of a disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination in the performance of this Agreement.
- B. *General non-discrimination.* No person shall, on the grounds of race, color, religion, ancestry, gender, age (over 40), national origin, medical condition (cancer), physical or mental disability, sexual orientation, pregnancy, childbirth or related medical condition, marital status, or political affiliation be denied any benefits or subject to discrimination under this Agreement.

- C. *Equal employment opportunity.* Contractor shall ensure equal employment opportunity based on objective standards of recruitment, classification, selection, promotion, compensation, performance evaluation, and management relations for all employees under this Agreement. Contractor's equal employment policies shall be made available to County of San Mateo upon request.
- D. *Violation of Non-discrimination provisions.* Violation of the non-discrimination provisions of this Agreement shall be considered a breach of this Agreement and subject the Contractor to penalties, to be determined by the County Manager, including but not limited to
  - i) termination of this Agreement;
  - ii) disqualification of the Contractor from bidding on or being awarded a County contract for a period of up to 3 years;
  - iii) liquidated damages of \$2,500 per violation;
  - iv) imposition of other appropriate contractual and civil remedies and sanctions, as determined by the County Manager.

To effectuate the provisions of this section, the County Manager shall have the authority to examine Contractor's employment records with respect to compliance with this paragraph and/or to set off all or any portion of the amount described in this paragraph against amounts due to Contractor under the Contract or any other Contract between Contractor and County.

Contractor shall report to the County Manager the filing by any person in any court of any complaint of discrimination or the filing by any person of any and all charges with the Equal Employment Opportunity Commission, the Fair Employment and Housing Commission or any other entity charged with the investigation of allegations within 30 days of such filing, provided that within such 30 days such entity has not notified Contractor that such charges are dismissed or otherwise unfounded. Such notification shall include the name of the complainant, a copy of such complaint, and a description of the circumstance. Contractor shall provide County with a copy of their response to the Complaint when filed.

- E. *Compliance with Equal Benefits Ordinance.* With respect to the provision of employee benefits, Contractor shall comply with the County Ordinance which prohibits contractors from discriminating in the provision of employee benefits between an employee with a domestic partner and an employee with a spouse.
- F. The Contractor shall comply fully with the non-discrimination requirements required by 41 CFR 60-741.5(a), which is incorporated herein as if fully set forth.

## **12. Compliance with Contractor Employee Jury Service Ordinance**

Contractor shall comply with the County Ordinance with respect to provision of jury duty pay to employees and have and adhere to a written policy that provides that its employees shall receive from the Contractor, on an annual basis, no less than five days of regular pay for actual jury service in San Mateo County. The policy may provide that employees deposit any fees received for such jury service with the Contractor or that the Contractor deduct from the employees' regular pay the fees received for jury service.

**13. Retention of Records, Right to Monitor and Audit**

(a) CONTRACTOR shall maintain all required records for three (3) years after the COUNTY makes final payment and all other pending matters are closed, and shall be subject to the examination and/or audit of the County, a Federal grantor agency, and the State of California.

(b) Reporting and Record Keeping: CONTRACTOR shall comply with all program and fiscal reporting requirements set forth by appropriate Federal, State and local agencies, and as required by the COUNTY.

(c) CONTRACTOR agrees to provide to COUNTY, to any Federal or State department having monitoring or review authority, to COUNTY's authorized representatives, and/or their appropriate audit agencies upon reasonable notice, access to and the right to examine all records and documents necessary to determine compliance with relevant Federal, State, and local statutes, rules and regulations, and this Agreement, and to evaluate the quality, appropriateness and timeliness of services performed.

**14. Merger Clause**

This Agreement, including the Exhibits attached hereto and incorporated herein by reference, constitutes the sole Agreement of the parties hereto and correctly states the rights, duties, and obligations of each party as of this document's date. In the event that any term, condition, provision, requirement or specification set forth in this body of the agreement conflicts with or is inconsistent with any term, condition, provision, requirement or specification in any exhibit and/or attachment to this agreement, the provisions of this body of the agreement shall prevail. Any prior agreement, promises, negotiations, or representations between the parties not expressly stated in this document are not binding. All subsequent modifications shall be in writing and signed by the parties.

**15. Controlling Law and Venue**

The validity of this Agreement and of its terms or provisions, as well as the rights and duties of the parties hereunder, the interpretation, and performance of this Agreement shall be governed by the laws of the State of California. Any dispute arising out of this Agreement shall be venued either in the San Mateo County Superior Court or in the United States District Court for the Northern District of California.

**16. Notices**

Any notice, request, demand, or other communication required or permitted hereunder shall be deemed to be properly given when both (1) transmitted via facsimile to the telephone number listed below and (2) either deposited in the United State mail, postage prepaid, or when deposited for overnight delivery with an established overnight courier that provides a tracking number showing confirmation of receipt, for transmittal, charges prepaid, addressed to:

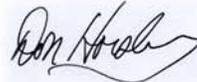

**In the case of County, to:**  
Director of Community Development  
Planning & Building Department  
455 County Center, Mail Drop PLN122  
Redwood City, CA 94063

**In the case of Contractor, to:**  
Analytical Environmental Services  
1801 7<sup>th</sup> Street, Ste 100  
Sacramento, CA 95811

In the event that the facsimile transmission is not possible, notice shall be given both by United States mail and an overnight courier as outlined above.

IN WITNESS WHEREOF, the parties hereto, by their duly authorized representatives, have affixed their hands.

COUNTY OF SAN MATEO

By: \_\_\_\_\_  
President, Board of Supervisors, San Mateo County

Date: May 7, 2013

ATTEST:   
By: \_\_\_\_\_  
Clerk of Said Board

Analytical Environmental Services (AES)  
  
\_\_\_\_\_  
Contractor's Signature

Date: 12-11-12

Resolution #072499

Exhibit "A"

In consideration of the payments set forth in Exhibit "B", Contractor shall provide the following services:

Contractor shall complete the preparation of an Environmental Impact Report for the proposed Ascensions Heights project (County File number PLN2002-00517) to be re-circulated. A complete Scope of Work is included in Exhibit C.

Exhibit "B"

In consideration of the services provided by Contractor in Exhibit "A", County shall pay Contractor based on the following fee schedule in attached Exhibit "B":

# EXHIBIT B - SCHEDULE OF CHARGES

AES schedule of hourly wage rates for the listing the labor categories, associated wage rates, and reimbursable expenses have been provided below.

Employee Category	Hourly Billing Rate
Principal	\$245
<b>Project Manager</b>	<b>\$140</b>
Analyst III	\$120
<b>Analyst II</b>	<b>\$110</b>
<b>Analyst I</b>	<b>\$105</b>
Cultural Resources Specialist	\$120
<b>Archaeologist III</b>	<b>\$110</b>
Archaeologist II	\$105
Archaeologist I	\$100
<b>Biologist III</b>	<b>\$120</b>
Biologist II	\$110
Biologist I	\$105
Sr. Graphic Designer	\$105
<b>Graphic Designer II</b>	<b>\$100</b>
Graphic Designer I	\$95
Office Administrator	\$100
Administrative Assistant III	\$90
Administrative Assistant II	\$85
<b>Administrative Assistant I</b>	<b>\$80</b>

Direct Costs	
Postage/Overnight Mail	Actual cost + 15%
Courier Charges	Actual cost + 15%
Mileage	Federal Rate - currently \$0.55 per mile + 15%
Other Direct Costs	Actual cost + 15%
In-house Copying Charges:	
Black & White	\$0.10 per page + 15%
Color	\$1 per page + 15%
CD duplication w/label & case	\$2.50 each + 15%

# EXHIBIT C - SCOPE OF WORK

## Project Understanding

The **Ascension Heights Subdivision Project (Proposed Project)** entails a request by the project proponent for the County of San Mateo to approve subdivision of six parcels on 21.13 acres into 21 lots for development of 19 single-family residences with the remaining 2 lots (approximately 7.81-acres) maintained as a conservation area. The project site is located adjacent to Ascension Drive and Bel Aire Road in unincorporated San Mateo County, approximately 0.87 miles north east of Highway 280 and 0.51 miles west of highway 92. Potable water would be provided by connection to the Mid-Peninsula Water District and wastewater collection would be provided by the Crystal Springs Sanitation District with treatment at the City of San Mateo Wastewater Treatment Plant. Development of the 19 subdivided lot into single-family residences would require 40,920 cubic yards of grading, of which 28,270 cubic yards would require exportation from the site. Accordingly, the project applicant also requires a grading permit from the County. Based on the size of the development, a Water Supply Assessment is not required for the Proposed Project. One significant consideration is the Cease and Desist Order (CDO) issued by the San Francisco Bay Regional Water Quality Control Board to the City of San Mateo, town of Hillsborough, and Crystal Springs County Sanitation District. The CDO was issued as a result of high infiltration rates of non wastewater during wet weather into the wastewater conveyance system resulting in associated decreases in sewage conveyance capacity which lead to unregulated releases of wastewater to surface waters. This issue will be addressed in the Draft EIR.

The Proposed Project is a re-design of a previous project that was denied by the San Mateo County Planning Commission in 2009. A Draft Environmental Impact Report (Draft EIR) and Final Environmental Impact Report (Final EIR) were prepared for the previously proposed project. The scope of services will utilize, to the extent feasible, existing information from the previous environmental process to provide a Revised EIR that meets the current CEQA guidelines as well as current legal precedent for the analysis of environmental impacts developed through CEQA case law.

## Scope of Services

### *Program Description*

The overall objective and focus of the work plan outlined below is the efficient preparation of a Revised EIR that meets the legal requirements of a complete, adequate, and objective statement of the Proposed Project's environmental consequences while incorporating background information and analysis prepared during the previous EIR process to the extent feasible and reasonable in a cost effective manner. The resulting Revised EIR document will provide a concise, integrated source of information for the public, county decision makers, and other permitting agencies including the California Department of Fish and Game, U.S. Army Corps of Engineers, and the Regional Water Quality Control Board.

## *County Direction*

AES works as an extension of County staff. Our Project Manager would take direction from the assigned County Project Manager. In this role, AES will pro-actively assist with meeting the stated project objectives by maintaining an up-to-date schedule that indicates deliverable due dates and responsible parties. AES has enjoyed similar working relationships with a variety of federal, state, and municipal agencies.

## *Proposed Course of Action*

**Task 1: Kick-Off Meeting, Project Initiation and Information Review.** AES will meet with the County to establish lines of communication, determine the nature and format of the document to be prepared, and obtain relevant documentation and project details. Following this meeting, AES will review all project documentation and related planning materials, including the additional information for the previous EIR that may not have been provided during development of this Scope of Work, and available planning documents including General Plan materials, utility master plans, the County's subdivision regulations, tree regulations, and the Countywide Transportation Plan. Following this review, AES will develop a final project schedule and work plan that meets the needs of the County.

**Deliverables:** AES will prepare a final work plan and schedule to be distributed to the project team via email within five (5) days of the project initiation meeting.

**Task 2: Initial Study, NOP and Scoping.** Following the project initiation meeting, AES will prepare a draft Initial Study (IS) that includes a checklist consistent with Appendix G of the CEQA Guidelines and County guidance. The IS will be used to screen nonsignificant environmental issues from further consideration within the EIR. Following completion of the IS, AES will prepare a Notice of Preparation (NOP). Flexibility will be built into the NOP in anticipation of minor adjustments to project layout and design. This Scope of Work assumes that the County will coordinate circulation of the IS/NOP to the public. AES's Sacramento Office is located mere blocks from the State Clearinghouse and can readily deliver the IS/NOP in a cost effective manner. AES will attend and provide environmental expertise at one public town hall/scoping meeting during the 30-day public review period starting with release of the NOP. It is assumed that the County will be responsible for reserving an appropriate venue for the meeting. AES shall prepare up to 4 poster board exhibits for the public town hall/scoping meeting.

**Deliverables:** AES will provide the County with an electronic version of the IS. AES will revise the IS based on a comprehensive set of comments received on the electronic version from the County. The IS will be included as an appendix to the Administrative Draft EIR. AES will provide an electronic copy of the draft NOP to the County for review. AES will revise the NOP based on a comprehensive set of comments received on the electronic version from the County. AES will provide electronic copies of the proposed poster board exhibits prior to the public town hall/scoping meeting for approval.

**Task 3: Administrative Draft Revised EIR Preparation.** AES will conduct field studies and analysis as necessary to prepare an Administrative Draft EIR (ADEIR) in accordance with the State CEQA Guidelines, and relevant case law. AES will review the results of the IS and scoping comments submitted during the NOP comment period to focus the EIR analysis on those issues that are identified as potentially significant. AES will prepare a summary list of relevant issues to be addressed within the project analysis and consult with the County regarding any revisions to the scope of EIR services, if necessary. Given the nature of the Proposed Project, AES anticipates the EIR will be rather comprehensive, with sections analyzing the direct, indirect, and cumulative effects associated with each of the following issue areas:

- Aesthetics
- Agricultural Resources
- Air Quality and Greenhouse Gases
- Biological Resources
- Cultural Resources
- Geology and Soils
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population and Housing
- Public Services
- Recreation
- Utilities and Service Systems
- Transportation and Traffic

As Lead Agency, the County will make the final determination regarding the content of the EIR. Upon award of the contract, AES and the County would consider each issue area and draft a more detailed work plan that clearly outlines the expectations of the County and the obligations of AES.

**Deliverables:** AES will provide the County with a total of three (3) bound hardcopies and one (1) CD copy in color PDF format of the ADEIR.

### *ADEIR Contents*

Executive Summary. This section will provide an overview of the Draft EIR (DEIR) and include a summary table of all identified environmental effects, mitigation, and the significance level of impacts before and after mitigation.

Introduction. This section will explain the applicability of CEQA to the Proposed Project, describes the CEQA public review process, summarizes significant issues raised during the scoping process, and outlines the organization of the EIR.

Project Description. This section will present the background of the Proposed Project and identify the County's objectives in pursuing the project. AES will incorporate detailed project information and exhibits provided by the Applicant and County to describe each component of the Proposed Project in sufficient detail to enable identification of the largest envelope of potential environmental impacts. All anticipated approvals, permits, and other actions that will rely on the EIR will be identified.

Environmental Setting and Analysis. Considered the heart of the EIR, this section will provide a separate subsection for each environmental issue area in which a potentially significant impact was identified during the IS and scoping process. Each issue area subsection will discuss the existing setting, regulatory framework, analysis methods and thresholds, anticipated project-related impacts, and recommended mitigation measures to reduce or avoid adverse effects.

Cumulative Impacts. AES will assess the cumulative impacts of the Proposed Project in connection with other reasonably foreseeable projects and build-out of the County's General Plan. If available, the cumulative analysis will also consider growth projections anticipated in the County's on-going General Plan Update. AES will work with the County and relevant agencies to develop a list of relevant projects and define the geographical scope of the cumulative analysis. Cumulative analysis will cover each issue area addressed under the Environmental Setting and Analysis section of the EIR. Anticipated project-related cumulative impacts will be identified and mitigation measures will be recommended to reduce or avoid adverse effects.

Project Alternatives. In accordance with CEQA Guidelines Section 15126.6, AES will work with the County and Applicant to develop up to four (4) alternatives that could feasibly attain most of the basic objectives of the Proposed Project and would substantially lessen one or more of the project's significant environmental effects. The following alternatives may be considered as part of this process, although it is anticipated that one or more may be eliminated from detailed consideration due to the increased potential for environmental impacts:

1. No Project Alternative. As required by CEQA, one of the alternatives will be a No Project Alternative. This alternative will assume that the Proposed Project would not occur. While it is anticipated that some environmental impacts would be reduced, the basic objectives of the project would not be accomplished and may result in greater effects associated with water quality and noncompliance with permit requirements.
2. Reduced Footprint Alternative. AES will work with the County to identify a mitigated project footprint alternative within the boundaries of the project site. It is anticipated that a reconfiguration of land uses and clustering of high density residential development would accomplish the goals of this alternative.
3. Reduced Density Alternative. AES will work with the County to define a reduced density alternative that would result in fewer residents on the project site, and thus fewer demands on public utilities and infrastructure.

According to CEQA Guidelines Section 15126.6(d), “the significant effects of an alternative shall be discussed, but in less detail than the significant effects of the project as proposed.” The assessment of project alternatives will be consistent with this requirement by presenting a sufficient amount of detail necessary to afford decision makers with a reasoned choice. In most cases, environmental analyses conducted for the Proposed Project will be applicable to alternative development scenarios. Qualitative analysis of air quality and noise impacts associated with project alternatives will be conducted.

### *Issue Area Analysis and Assumptions*

Aesthetics. Development of the Proposed Project would alter the visual character of the project site from open space to urban; however, the surrounding areas consist of housing developments of similar density and therefore impacts are anticipated to be less than significant. Using visual representations of the project to be provided by the Applicant and existing analysis from the 2009 EIR to the extent possible, AES will complete the following tasks to determine the level of potential impacts and the need for mitigation:

- Review the relevant visual quality standards contained in the County’s General Plan and consider the applicability of planning policies and ordinances related to aesthetics.
- Conduct reconnaissance field studies to assess the visual character of the project site and surrounding public view areas. Document existing visual conditions on the project site through photographs and detailed descriptions.
- Incorporate the existing three dimensional visual design exhibits of the proposed facilities prepared by Lea and Braze Engineering, Inc. for the Applicant into site and aerial photographs of the project site to assess impacts to aesthetics and viewsheds of the project region.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the aesthetics section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts and ensure consistency with relevant visual quality standards of the County’s General Plan.

Air Quality. Development of the Proposed Project would result in short-term emissions and fugitive dust during the construction phase and long-term emissions associated with vehicle traffic. AES will complete the following tasks to determine the level of potential air quality impacts and the need for mitigation.

- Review relevant local/regional air quality standards for the project area, including those issued by the Bay Area Air Quality Management District (AQMD) and California Air Resources Board (CARB).
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including the Federal Clean Air Act and California Clean Air Act.
- Document existing sources of air pollution and identify sensitive receptors that may be affected by development of the Proposed Project.
- AES will conduct a HRA for the Proposed Project. The assessment will use accepted County or Air District protocols to determine the necessity for dispersion modeling. AES will use either AeMOD

or CAL3QHCR modeling software to estimate concentrations at defined receptor locations and will consult with the Air District and County to determine the appropriate level of analysis.

- Identify short-term air quality impacts from construction emissions using CARB-approved URBEMIS- modeling software. In order to estimate construction emissions, AES will coordinate with the County and Applicant to acquire information regarding the nature of construction activities, types of equipment that will likely be used, and the anticipated total area of disturbance.
- Identify long-term regional air quality impacts from mobile and area source emissions using CARB approved URBEMIS modeling software. This analysis will include quantification of criteria air pollutants identified in the local air quality management plans and shall be conducted according to district methodologies. Mobile source emissions will be estimated using vehicle trip generation and distribution information provided in the traffic study prepared by RKH.
- Quantify greenhouse gas emissions as recommended within the recent amendments to the CEQA Guidelines. In accordance with this guidance, AES will provide a qualitative, performance based approach to reducing impacts. This effort will be closely coordinated within the County's General Plan Update Process to ensure consistent methodology and thresholds are being applied.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the air quality section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts from both construction and operation of the Proposed Project. Modeling runs will be included as an appendix to the EIR.

Agricultural Resources. The Proposed Project would not result in the conversion of prime agricultural land. Additionally, no Williamson Act contracts are held on the subject parcels. AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process. Should it be determined that Agricultural Resources should be included within the EIR, AES will complete the following tasks using the existing analysis from the 2009 EIR to the extent possible to determine the level of potential impacts to agricultural resources and the need for mitigation:

- Review the relevant local policies concerning the protection of farmlands, including those contained in the County General Plan and General Plan Update.
- Describe and map the important agricultural soils in the project area including Prime Farmland, Farmland of Statewide Importance and Unique Farmland.
- Review information on existing agricultural resource in the region and current urbanization trends.
- AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process.

Biological Resources. Development of the Proposed Project has the potential to impact special-status species and other biological resources, including the endangered Mission Blue Butterfly. This scope of work does not provide for protocol-level biological surveys or permitting. AES will complete the following tasks to determine the level of potential biological impacts and the need for mitigation:

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Federal Endangered Species Act, Fish and Wildlife Coordination Act, Migratory Bird Treaty Act, Clean Water Act (Sections 401 and 404), Magnuson Fisheries-Stevens Fishery

Conservation and Management Act, California Endangered Species Act, California Fish and Game Code, and Porter-Cologne Water Quality Control Act.

- Review existing information related to biological resources included within the Biological Resources Assessment prepared for the 2009 EIR.
- Conduct an updated query of the California Natural Diversity Database/RareFind, California Native Plant Society's Electronic Inventory, and the California Wildlife-Habitat Relationships database, and obtain current special-status species lists for the project area from the U.S. Fish and Wildlife Service (USFWS).
- Conduct a biological field survey of the project site to establish the potential for occurrences of special-status species or critical habitat and confirm the findings of the Biological Resources Assessment prepared by the Applicant.
- Incorporate information from existing studies and findings into the biological resources section of the EIR and recommend avoidance or mitigation measures to reduce any potentially significant impacts. In coordination with the County, AES will informally consult with USFWS and the California Department of Fish and Game to refine mitigation measures and meet regulatory requirements. This coordination will promote an efficient environmental review process for the Proposed Project.

Cultural Resources. Development of the Proposed Project could result in adverse impacts to previously documented, newly identified, or inadvertently discovered cultural resources. Preliminary site reconnaissance indicates that the project site has been substantially disturbed from agricultural activities; however, impacts to unanticipated archaeological resources discovered during construction are always a possibility. AES will complete the following tasks during preparation of the cultural resources section of the EIR.

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: CEQA Guidelines 15064.5 and PRC 21083.2, SB-18 – Tribal Consultation (required for General Plan Amendment), Section 106 of the National Historic Preservation Act (required for 404 permits)
- Conduct an updated records search at the Northwest Information Center of the California Historical Resources Information System.
- Request a sacred lands search and stakeholders list from the Native American Heritage Commission (NAHC). AES will send preliminary consultation letters to all Native American stakeholders identified by the NAHC.
- Conduct an intensive Phase-I pedestrian survey of the project site. The survey will include recordation of any newly identified sites on appropriate DPR forms. Records of previously identified sites will be updated if necessary. This scope of work assumes that no more than two relatively simple resources will require recordation or updating. Evaluation of site significance is not included in the enclosed cost estimate. If it is determined that identified site(s) need to be evaluated, AES will provide a detailed scope of work and cost estimate for this work.

- Assist the County with SB-18 consultation. SB-18 assistance will include identification of stakeholders, provision of invitation to consult language, and attendance at up to two meetings with tribal representatives.
- Conduct all surveys and records searches in compliance with Section 106 of National Historic Preservation Act in the event that federal permitting is required.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the cultural resources section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts. This Scope of Work does not provide for testing or data recovery of any identified archaeological sites.

Geology and Soils. Development of the Proposed Project has the potential to result in soil erosion or subject people or property to geologic or seismic risks. AES is teaming with Michelucci and Associates to conduct an Updated Geotechnical Study to supplement the geotechnical study they prepared for the 2009 EIR. AES will complete the following tasks during preparation of the geology and soils section of the EIR:

- Review the relevant local and regional planning policies and ordinances related to geology, soils and seismic hazards within the project area, including those contained in the County's General Plan.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Soil and Water Conservation Act, National Earthquake Hazards Reduction Program, Alquist-Priolo Earthquake Fault Zoning Act, Seismic Hazards Mapping Act, and California Building Standards Code.
- Identify soils types within the project area based on a review of U.S. Department of Agriculture soils surveys and field investigations to estimate the potential for erosion, settlement, and liquefaction; however, it is assumed that a geotechnical report or other appropriate analysis shall be conducted that determines the shrink/swell potential and stability of the soil to support the proposed facilities prior to construction.
- Review regional/local earthquake fault and seismic hazard maps to determine the potential for seismic related hazards.
- Incorporate findings of the Geotechnical Study prepared by Michelucci and Associates and existing analysis from the 2009 EIR to the extent possible into the geology and soils section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Hazards and Hazardous Materials. Development of the Proposed Project may subject people to hazardous materials or hazards. The majority of the project site has been formerly used for agricultural purposes. AES will complete the following tasks during preparation of the Hazards/Hazardous Materials section of the EIR:

- Review the relevant local and regional planning policies and ordinances related to hazards and hazardous materials within the project area, including those contained in the County's General Plan.

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Resources Conservation and Recovery Act, Hazardous and Solid Waste Management Acts, and Comprehensive Environmental Response, Compensation, and Liability Act.
- Request a database search from Environmental Data Services to identify whether the project site is listed on various local, state, or federal hazardous materials databases. AES will also search online database resources regarding facilities or sites identified as meeting the “Cortese List” requirements pursuant to Government Code Section 65962.5.
- AES will research historic land usage within and adjacent to the project site, including review of historic topographic maps and aerial photographs.
- AES will incorporate findings and existing analysis from the 2009 EIR to the extent possible into the hazards and hazardous materials section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Hydrology and Water Quality. Development of the Proposed Project would alter the existing drainage patterns on the project site during both construction and operation, potentially impacting run-off quantity and quality. AES understands that Lea and Braze have already completed an updated hydrological evaluation of the project site to assess drainage impacts associated with the development of impervious surfaces on the project site. AES will complete the following tasks during preparation of the Hydrology and Water Quality Section of the EIR:

- Review existing information concerning water quality in the project area and consider the applicability of relevant local/regional planning policies and ordinances.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including the Clean Water Act and Porter-Cologne Water Quality Act.
- Identify flood hazards on the site or in the immediate project area through Review of FEMA Flood Insurance maps, the proposed flood protection/prevention measures of the project (if needed), and determine residual effects on localized or downstream flooding.
- Peer review drainage plans, estimates of storm water volumes, and existing system capacities provided to AES by Lea and Braze during the hydrological study, the County and/or the Applicant.
- Using existing information, identify the general types and sources of water quality changes that may result from the proposed development. Evaluate potential impacts of runoff from the project site on the quality of receiving waters.
- Discuss the need to apply for an NPDES permit for construction activities. Identify guidelines and policies of the SFBRWQCB, U.S. Environmental Protection Agency, and County plans regarding water quality impacts from storm water runoff.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Hydrology and Water Quality section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Land Use and Planning. The Proposed Project would result in the subdivision of the project site for the development of 19 single-family residential units. Implementation of the Proposed Project must be

considered in light of existing policies included within the County's General Plan and General Plan Update. Additionally, the Proposed Project will introduce new land uses that may be incompatible with existing or planned land uses on adjacent properties. Based on an initial review of the General Plan and Land Use designations for the project site, the Proposed Project is consistent with the land use planning documents governing development on the project site and the density of development is consistent with zoning designations. Accordingly, AES anticipates that impacts to Land Use and Planning will be less than significant and no mitigation will be required. To ensure a complete analysis is provided, AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted land use studies associated with the project area and consider the applicability of relevant local/regional planning policies and ordinances.
- Identify existing, approved, and proposed land use and zoning designations within and surrounding the project site.
- Consider the consistency of the Proposed Project with existing applicable planning documents, and include "planning consistency matrix" as an appendix to the EIR.
- Assess potential long-term compatibility issues, as well as short-term issues associated with phased development and non-conforming land uses.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Land Use and Planning section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Noise. Development of the Proposed Project would result in a short-term increase in noise and vibration during the construction phase and would result in long-term noise increases related to traffic and operational activities that may impact sensitive receptors. AES will conduct a noise assessment of the project site and incorporate the analysis and conclusions into the Noise Section of the EIR. AES will complete the following task to determine the level of potential impacts and the need for mitigation.

- Existing Noise Levels: Conduct a detailed ambient noise survey to quantify existing noise conditions at the project site and at the nearest potentially affected noise-sensitive land uses. The survey will consist of continuous and short-term noise level measurements at as many locations deemed necessary to thoroughly identify existing noise conditions for the project area which will include traffic noise from State Route 280 and 92. To the extent that information contained in the 2009 EIR is still relevant, AES will make use of it.
- Prepare Technical Report in Support of the EIR Noise Section that will contain the results of the previous task in the above-described scope of work, as well as graphics showing noise measurement locations and potential noise mitigation locations as appropriate. The report will be included as an appendix to the EIR. AES will incorporate existing analysis from the 2009 EIR to the extent possible.

Public Services and Recreation: Development of the Proposed Project would result in an increased demand for public services and recreation, including public schools, law enforcement, and fire protection. Additionally, the increase in population as a result of the project will result in increased use of County and

regional recreational facilities. AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted studies associated with the project site and consider the applicability of relevant local/regional planning policies and ordinances..
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including:
  - Uniform Fire Code
  - California Health and Safety Code
- AES will update the public service provided questionnaires provided Appendix C of the 2009 Draft EIR. AES will contact local service providers, including the Sheriff's Department, Fire Department, County Parks Department, County Public Libraries, and School Districts to determine existing service levels in the project area and need for additional personnel, equipment, and facilities.
- Estimate the new service demands resulting from the development of the Proposed Project, including the increase in student enrollment, law enforcement demands, fire protection demands, and use of recreational facilities.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Public Services and Recreation section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Traffic and Circulation: Development of the Proposed Project would result in an increase in local traffic. AES is teaming with RKH for the preparation of a traffic analysis and study for the Proposed Project to determine the potential for adverse effects on traffic circulation and identify appropriate traffic improvements. AES will complete the following tasks during preparation of the transportation/traffic section of the EIR.

- Incorporate findings of the traffic impact analysis into the Transportation and Circulation section of the EIR.
- Assess potential impacts associated with pedestrian, bicycle, and public transportation, and recommend appropriate mitigation measures.
- Discuss potential short-term impacts associated with construction activities. It is anticipated that mitigation will likely include specific measures to be included within a Traffic Control Plan for construction activities.

Utilities and Service Systems: Development of the Proposed Project would result in an increased demand for public utilities, including potable water, wastewater treatment, drainage facilities, and solid waste services. AES is teaming with NV5, formerly Nolte and Associates to assess the potential impacts to sewer and water conveyance systems. The cost and scope assumes that the level of effort required is to update the analysis within the 2009 EIR and no modeling of conveyance capacities are required. AES will assess the potential impacts to other utility and service systems including solid waste, electricity, and telecommunications. AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted studies associated with the 2009 EIR and consider the applicability of relevant local/regional planning policies and ordinances.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: California Health and Safety Code, Integrated Waste Management Act, Water Management Planning Act, SB 610 – Water Availability Assessment. Based on the number of residential units, a Water Supply Assessment is not required under SB 610, which will be duly noted in the EIR.
- Coordinate with the County’s Public Utilities Department and local service providers to determine existing service levels in the project area.
- Estimate the new service demands resulting from the development of the Proposed Project, including water supply, wastewater, drainage and solid waste.
- Evaluate impacts to wastewater treatment and drainage facilities in light of information provided within NV5’s technical assessment.
- In accordance with thresholds provided in Appendix G of the CEQA Guidelines, evaluate physical environmental impacts resulting from proposed improvements to utility systems, including the any proposed upgrades to Crystal Springs County Special District and San Mateo Wastewater Treatment plant. This task does not include site visits to assess existing conditions of off-site improvements that may be required to update wastewater infrastructure to meet the wastewater demands of the project.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Public Services and Utilities section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

**Task 4: Draft EIR and Public Circulation.** AES will meet with the County to clarify any comments and questions raised during review of the ADEIR. AES will revise the ADEIR based on a single set of comprehensive comments provided by the County. AES will provide an electronic screen check version of the Draft EIR with track changes to the County for review prior to production. Following approval by the County, AES will facilitate preparation of the Notice of Availability (NOA) and public release of the DEIR.

AES technical staff will coordinate and attend one (1) public comment town hall meeting during the 45-day public comment period on the DEIR. AES will provide up to three (3) poster board displays for the meeting. It is assumed that the County will be responsible for reserving an appropriate venue. If desired, a court reporter will be provided by the County.

**Deliverables:** AES will provide the County with ten (10) bound hardcopies one (1) CD copy in color PDF format of the Draft EIR. Fifteen (15) CD copies of the Draft EIR with hardcopies of the Executive Summary will be submitted as required to the State Clearinghouse with the Notice of Availability. AES will provide electronic copies of the proposed poster board exhibits prior to the public town hall meeting for approval.

**Task 5: Final EIR and Mitigation Monitoring and Reporting Plan.** AES will compile comments received from the public and other interested parties during the 45-day public review period for the Draft EIR, and summarize key issues for discussion with the County. AES will meet with County staff to go over the approach for responding to key issues raised during the DEIR public review period. Following this meeting, AES will formulate responses, and make any necessary revisions to the EIR. This Scope of Work assumes a moderate level of effort will be required to respond to comments. A moderate level of effort is considered to be less than 15 comment letters and 50 individual substantive comments that require a response beyond comment noted. The Response to Comments and any refinements to the DEIR text will be incorporated into a “freestanding” Final EIR. AES will prepare a Mitigation Monitoring and Reporting Plan (MMRP) to support the County’s certification of the Final EIR. The MMRP will be referenced within the text of the Final EIR and will be included as an appendix in the final document.

**Deliverables:** AES will provide the County with a total of ten (10) bound hardcopies and one (1) CD copy in PDF format of the Final EIR.

**Task 6: Findings and Final EIR Certification Support.** AES will assist with preparation of the Findings of Fact and Statement of Overriding Considerations. AES will attend/present at one meeting with the Planning Commission, and up to two staff meetings for certification of the Final EIR and Findings and Statement of Overriding Considerations.

**Task 7: Project Management and Meetings.** The AES management team will complete the myriad of small and often unforeseen tasks required to implement the preparation of an EIR. This includes numerous phone calls and emails necessary to facilitate information exchange between the Project Team and jurisdictional agencies, as well as the time required to prepare agendas, meeting minutes, schedules, and other such documents. Under this task, AES will:

- Attend a scoping hearing;
- Participate in up to 3 (3) two-hour project coordination meetings with planning staff at the County offices for the development of the Draft EIR;
- Attend up to two (2) Planning Commission hearings; and
- Participate in up to ten (10) one-hour project related conference calls with members of the project team and jurisdictional agencies.

**Deliverables:** AES will submit monthly status reports to the Project Team via email by the fifth business day of each month. AES will prepare and distribute minutes for each project-related meeting that will outline key decisions and action items.

**RESOLUTION NO. 072499**

**BOARD OF SUPERVISORS, COUNTY OF SAN MATEO, STATE OF CALIFORNIA**

\* \* \* \* \*

**RESOLUTION AUTHORIZING AN AGREEMENT WITH ANALYTICAL ENVIRONMENTAL SERVICES TO PREPARE DRAFT AND FINAL ENVIRONMENTAL IMPACT REPORTS FOR THE ASCENSION HEIGHTS SUBDIVISION FOR THE TERM OF MAY 9, 2013 THROUGH MAY 9, 2014, IN AN AMOUNT NOT TO EXCEED \$113,075**

---

**RESOLVED**, by the Board of Supervisors of the County of San Mateo, State of California, that

**WHEREAS**, the County and Analytical Environmental Services wish to enter into an Agreement, reference to which is hereby made for further particulars, whereby Analytical Environmental Services for the term of May 9, 2013 through May 9, 2014 will prepare Draft and Final Environmental Impact Reports for a maximum fiscal obligation of \$113,075; and

**WHEREAS**, this Board has been presented with a form of said Agreement and has examined and approved same as to both form and content and desires to enter into it.

**NOW, THEREFORE, IT IS HEREBY DETERMINED AND ORDERED** that the President of this Board of Supervisors be, and is hereby, authorized and directed to execute said Agreement for and on behalf of the County of San Mateo, and the Clerk of this Board shall attest the President's signature thereto.

**BE IT FURTHER RESOLVED**, that the Community Development Director or designee is authorized to execute contract amendments which modify the County's maximum fiscal obligation by no more than \$25,000 (in aggregate), and/or modify the contract term and/or services so long as the modified term or services is/are within the current or revised fiscal provisions.

**THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.**

**BLANKET ADDITIONAL INSURED  
(ARCHITECTS, ENGINEERS AND SURVEYORS)**

This endorsement modifies insurance provided under the following:  
COMMERCIAL GENERAL LIABILITY COVERAGE PART

**A. The following is added to WHO IS AN INSURED (Section II):**

Any person or organization that you agree in a "contract or agreement requiring insurance" to include as an additional insured on this Coverage Part, but only with respect to liability for "bodily injury", "property damage" or "personal injury" caused, in whole or in part, by your acts or omissions or the acts or omissions of those acting on your behalf:

- a. In the performance of your ongoing operations;
- b. In connection with premises owned by or rented to you; or
- c. In connection with "your work" and included within the "products-completed operations hazard".

Such person or organization does not qualify as an additional insured for "bodily injury", "property damage" or "personal injury" for which that person or organization has assumed liability in a contract or agreement.

The insurance provided to such additional insured is limited as follows:

- d. This insurance does not apply on any basis to any person or organization for which coverage as an additional insured specifically is added by another endorsement to this Coverage Part.
- e. This insurance does not apply to the rendering of or failure to render any "professional services".
- f. The limits of insurance afforded to the additional insured shall be the limits which you agreed in that "contract or agreement requiring insurance" to provide for that additional insured, or the limits shown in the Declarations for this Coverage Part, whichever are less. This endorsement does not increase the limits of insurance stated in the **LIMITS OF**

**INSURANCE (Section III) for this Coverage Part.**

**B. The following is added to Paragraph a. of 4. Other Insurance in COMMERCIAL GENERAL LIABILITY CONDITIONS (Section IV):**

However, if you specifically agree in a "contract or agreement requiring insurance" that the insurance provided to an additional insured under this Coverage Part must apply on a primary basis, or a primary and non-contributory basis, this insurance is primary to other insurance that is available to such additional insured which covers such additional insured as a named insured, and we will not share with the other insurance, provided that:

- (1) The "bodily injury" or "property damage" for which coverage is sought occurs; and
- (2) The "personal injury" for which coverage is sought arises out of an offense committed;

after you have entered into that "contract or agreement requiring insurance". But this insurance still is excess over valid and collectible other insurance, whether primary, excess, contingent or on any other basis, that is available to the insured when the insured is an additional insured under any other insurance.

**C. The following is added to Paragraph 8. Transfer Of Rights Of Recovery Against Others To Us in COMMERCIAL GENERAL LIABILITY CONDITIONS (Section IV):**

We waive any rights of recovery we may have against any person or organization because of payments we make for "bodily injury", "property damage" or "personal injury" arising out of "your work" performed by you, or on your behalf, under a "contract or agreement requiring insurance" with that person or organization. We waive these rights only where you have agreed to do so as part of the "contract or agreement requiring insurance" with such person or organization entered into by you before, and in effect when, the "bodily

COMMERCIAL GENERAL LIABILITY

injury" or "property damage" occurs, or the "personal injury" offense is committed.

D. The following definition is added to **DEFINITIONS (Section V)**:

"Contract or agreement requiring insurance" means that part of any contract or agreement under which you are required to include a person or organization as an additional insured on this Cov-

erage Part, provided that the "bodily injury" and "property damage" occurs, and the "personal injury" is caused by an offense committed:

- a. After you have entered into that contract or agreement;
- b. While that part of the contract or agreement is in effect; and
- c. Before the end of the policy period.

Insured: Analytical Environmental Services  
Policy No.: 6809B933274

Insurance Company:  
Travelers Insurance Company

A handwritten signature in black ink, appearing to be the initials 'AR' or similar, located in the center of the page.

**THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.**

## **AUTO COVERAGE PLUS ENDORSEMENT**

This endorsement modifies insurance provided under the following:

### **BUSINESS AUTO COVERAGE FORM**

With respect to coverage provided by this endorsement, the provisions of the Coverage Form apply unless modified by the endorsement.

**GENERAL DESCRIPTION OF COVERAGE** – This endorsement broadens coverage. However, coverage for any injury, damage or medical expenses described in any of the provisions of this endorsement may be excluded or limited by another endorsement to the Coverage Part, and these coverage broadening provisions do not apply to the extent that coverage is excluded or limited by such an endorsement. The following listing is a general coverage description only. Limitations and exclusions may apply to these coverages. Read all the provisions of this endorsement and the rest of your policy carefully to determine rights, duties, and what is and is not covered.

|--|---|

**A. BLANKET ADDITIONAL INSURED**

The following is added to Paragraph A.1., **Who Is An Insured**, of **SECTION II – LIABILITY COVERAGE**:

Any person or organization who is required under a written contract or agreement between you and that person or organization, that is signed and executed by you before the "bodily injury" or "property damage" occurs and that is in effect during the policy period, to be named as an additional insured is an "insured" for Liability Coverage, but only for damages to which this insurance applies and only to the extent that person or organization qualifies as an "insured" under the Who Is An Insured provision contained in Section II.

**B. EMPLOYEE HIRED AUTO**

1. The following is added to Paragraph A.1., **Who Is An Insured**, of **SECTION II – LIABILITY COVERAGE**:

An "employee" of yours is an "insured" while operating a covered "auto" hired or rented under a contract or agreement in that "employee's" name, with your permission, while

performing duties related to the conduct of your business.

2. The following replaces Paragraph b. in B.5., **Other Insurance**, of **SECTION IV – BUSINESS AUTO CONDITIONS**:

b. For Hired Auto Physical Damage Coverage, the following are deemed to be covered "autos" you own:

- (1) Any covered "auto" you lease, hire, rent or borrow; and
- (2) Any covered "auto" hired or rented by your "employee" under a contract in that individual "employee's" name, with your permission, while performing duties related to the conduct of your business.

However, any "auto" that is leased, hired, rented or borrowed with a driver is not a covered "auto".

**C. EMPLOYEES AS INSURED**

The following is added to Paragraph A.1., **Who Is An Insured**, of **SECTION II – LIABILITY COVERAGE**:

## COMMERCIAL AUTO

Any "employee" of yours is an "insured" while using a covered "auto" you don't own, hire or borrow in your business or your personal affairs.

### D. SUPPLEMENTARY PAYMENTS – INCREASED LIMITS

1. The following replaces Paragraph **A.2.a.(2)** of **SECTION II – LIABILITY COVERAGE**:

(2) Up to \$3,000 for cost of bail bonds (including bonds for related traffic law violations) required because of an "accident" we cover. We do not have to furnish these bonds.

2. The following replaces Paragraph **A.2.a.(4)** of **SECTION II – LIABILITY COVERAGE**:

(4) All reasonable expenses incurred by the "insured" at our request, including actual loss of earnings up to \$500 a day because of time off from work.

### E. TRAILERS – INCREASED LOAD CAPACITY

The following replaces Paragraph **C.1.** of **SECTION I – COVERED AUTOS**:

1. "Trailers" with a load capacity of 3,000 pounds or less designed primarily for travel on public roads.

### F. HIRED AUTO PHYSICAL DAMAGE

The following is added to Paragraph **A.4.**, **Coverage Extensions**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

#### Hired Auto Physical Damage Coverage

If hired "autos" are covered "autos" for Liability Coverage but not covered "autos" for Physical Damage Coverage, and this policy also provides Physical Damage Coverage for an owned "auto", then the Physical Damage Coverage is extended to "autos" that you hire, rent or borrow subject to the following:

(1) The most we will pay for "loss" in any one "accident" to a hired, rented or borrowed "auto" is the lesser of:

- (a) \$50,000;
- (b) The actual cash value of the damaged or stolen property as of the time of the "loss"; or
- (c) The cost of repairing or replacing the damaged or stolen property with other property of like kind and quality.

(2) An adjustment for depreciation and physical condition will be made in determining actual cash value in the event of a total "loss".

(3) If a repair or replacement results in better than like kind or quality, we will not pay for the amount of betterment.

(4) A deductible equal to the highest Physical Damage deductible applicable to any owned covered "auto".

(5) This Coverage Extension does not apply to:

- (a) Any "auto" that is hired, rented or borrowed with a driver; or
- (b) Any "auto" that is hired, rented or borrowed from your "employee".

### G. PHYSICAL DAMAGE – TRANSPORTATION EXPENSES – INCREASED LIMIT

The following replaces the first sentence in Paragraph **A.4.a.**, **Transportation Expenses**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

We will pay up to \$50 per day to a maximum of \$1,500 for temporary transportation expense incurred by you because of the total theft of a covered "auto" of the private passenger type.

### H. AUDIO, VISUAL AND DATA ELECTRONIC EQUIPMENT – INCREASED LIMIT

Paragraph **C.2.**, **Limit Of Insurance**, of **SECTION III – PHYSICAL DAMAGE COVERAGE** is deleted.

### I. WAIVER OF DEDUCTIBLE – GLASS

The following is added to Paragraph **D.**, **Deductible**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

No deductible for a covered "auto" will apply to glass damage if the glass is repaired rather than replaced.

### J. PERSONAL EFFECTS

The following is added to Paragraph **A.4.**, **Coverage Extensions**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

#### Personal Effects Coverage

We will pay up to \$400 for "loss" to wearing apparel and other personal effects which are:

- (1) Owned by an "insured"; and
- (2) In or on your covered "auto".

This coverage only applies in the event of a total theft of your covered "auto".

No deductibles apply to Personal Effects coverage.

**K. AIRBAGS**

The following is added to Paragraph **B.3., Exclusions**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

Exclusion **3.a.** does not apply to "loss" to one or more airbags in a covered "auto" you own that inflate due to a cause other than a cause of "loss" set forth in Paragraphs **A.1.b.** and **A.1.c.**, but only:

- a. If that "auto" is a covered "auto" for Comprehensive Coverage under this policy;
- b. The airbags are not covered under any warranty; and
- c. The airbags were not intentionally inflated.

We will pay up to a maximum of \$1,000 for any one "loss".

**L. AUTO LOAN LEASE GAP**

The following is added to Paragraph **A.4., Coverage Extensions**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

**Auto Loan Lease Gap Coverage for Private Passenger Type Vehicles**

In the event of a total "loss" to a covered "auto" of the private passenger type shown in the Schedule or Declarations for which Physical Damage Coverage is provided, we will pay any unpaid amount due on the lease or loan for such covered "auto" less the following:

- (1) The amount paid under the Physical Damage Coverage Section of the policy for that "auto"; and

(2) Any:

- (a) Overdue lease or loan payments at the time of the "loss";
- (b) Financial penalties imposed under a lease for excessive use, abnormal wear and tear or high mileage;
- (c) Security deposits not returned by the lessor;
- (d) Costs for extended warranties, Credit Life Insurance, Health, Accident or Disability Insurance purchased with the loan or lease; and
- (e) Carry-over balances from previous loans or leases.

**M. BLANKET WAIVER OF SUBROGATION**

The following replaces Paragraph **A.5., Transfer Of Rights Of Recovery Against Others To Us**, of **SECTION IV – BUSINESS AUTO CONDITIONS**:

**5. Transfer Of Rights Of Recovery Against Others To Us**

We waive any right of recovery we may have against any person or organization to the extent required of you by a written contract executed prior to any "accident" or "loss", provided that the "accident" or "loss" arises out of the operations contemplated by such contract. The waiver applies only to the person or organization designated in such contract.

**Subject:** Ascension Heights EIR Scoping Meeting

Heather,

We need to start coordinating a location to host the required scoping session for the Ascension Heights EIR. With the last version of this project, the previous scoping session and public hearing was held at the College of San Mateo theater. The venue was both in the community where the project is located in, as well as adequate for the expected attendance. If possible, we need to see what kind of availability they would have in August, ideally the week of the 19th, midweek, and in the evening. Rosario had made the arrangements last time, so I'm not sure who our contact was or what was required to hold this meeting. If you can, please start looking into this as I try to coordinate with the consultant. Thanks Heather, please let me know if you have any questions.

Heather,

It was the actual theater we used. Expected attendance will necessitate such. I'm not sure what the fee arrangement was the last time, but it was December 9, 2009 if that helps. I was not involved in booking the venue.

**Date:** 7/9/2013 10:13 AM  
**Subject:** Fwd: FW: Availability Inquiry - August 20th, 21st, 22nd

Good morning James,

Do you know what time of day you want to hold this meeting? (7-9?) I'll clarify with the Theater about when they expect it to be hectic. And which of the 3 days do you prefer?

Thank you, Heather

>>> "Souranoff, Helen P." <souranoff@smccd.edu> 7/9/2013 8:39 AM >>>

Hello, Heather.

Received your request. All three evenings are available, but please note it will be the first week of classes, so parking/first week madness will be occurring.

Are there any other dates I can interest you in? the week after?

Good afternoon,

I'm writing because my organization is going to schedule a public meeting - the Ascension Heights Environmental Impact Report Scoping meeting. Our initial meeting was held at your facility. Name of organization - County of San Mateo Planning & Building Department Phone number - 650-363-1859 Proposed date of use - either August 20th, 21st, or 22nd Time of use - evening (perhaps 7 - 9 or

similar)Profit or non-profit status - Non-profit (governmental) agencyTechnical requirements; these don't have to be specific yet, just an overview of the show. - microphones, podium, I will gather more specifics

Please let me know if you can accommodate our dates.

Thank you,

Heather

Hi James,

Jim is back from BoS and I have the following update:  
He's definitely taking those days off, and is fine with Steve covering the Scoping meeting. Steve also told me that he can be available the evening of the 21st. I'm good with going forward with the venue - please let me know if you object.

Thanks,  
Heather

Hello Helen,

Thank you so much for the fast response. I'm waiting on some confirmations, but I feel that 8/21 may be our date. The event would be from approximately 7 to 9 in the evening. Do you think that parking (and first week chaos) would be an issue that late in the evening? (It's been awhile since I was in college, so I'm not sure how these things go these days!)

Thanks again,  
Heather

**Attachments:** Deferred Revenue Contracts 13-14.xls

Hi Eliza,

I've attached the list of Deferred Revenue accounts, and I request that you enter the Deferred Revenue Journal. This should be completed as it was for 11/12 - 38430-2652 was Debited, and 38430-5858 was credited. (Virginia crossed out 38430-5858 and replaced it with the Controller's 00001-0780 last year). I have PDF'd POST reports for each of these contracts, so please let me know if you (or Controllers) need to see them.

Please let me know if you have any questions, or if you need anything further from me. (Perhaps a signature?) Thank you once again for all of your help.

Heather

Hi Heather; please provide the following:  
Info needed for preliminary contract:

Date: August 21st, 2013

Time of load in: 6P?

Time of show start: 7P?

Time of show end/ load out: 9P

Expecting full house?

Any charge for admission none

Any food, drinks, other items sold: no

Tech requirements: please list what you would need for your program; i.e.: microphones, rigging, special lighting, audio, any projections?

Talent requirements: any talent, organizers physically disabled?

If food trucks:

The vendor show a valid SM Health Department permit to prepare and sell food and if a vehicle is involved , a valid SM County Health Department certification of that vehicle as a place where food can be prepared and served.

With this information, I will be able to generate a preliminary contract thank you.

**Date:** 7/16/2013 12:49 PM  
**Subject:** RE: FW: Availability Inquiry - August 20th, 21st, 22nd

Hello Helen,

I apologize for the delay - your message was in my "Spam" folder. I've filled in the missing information below.

Info needed for preliminary contract:

**Date:** August 21st, 2013 (We could potentially use August 20th. Do you have a recommendation about if traffic/parking would be the same or worse/better if we changed dates?)

**Time of load in:** 6P

**Time of show start:** 7P

**Time of show end/ load out:** 9P

**Expecting full house?** Anticipating approximately 100 attendees, based on previous attendance.

**Any charge for admission** none

**Any food, drinks, other items sold:** no

**Tech requirements:** please list what you would need for your program; i.e.: microphones, rigging, special lighting, audio, any projections? Microphones, podium, projector, screen

**Talent requirements:** any talent, organizers physically disabled? No.

**If food trucks:**

The vendor show a valid SM Health Department permit to prepare and sell food and if a vehicle is involved , a valid SM County Health Department certification of that vehicle as a place where food can be prepared and served. (N/A for this meeting)

With this information, I will be able to generate a preliminary contract thank you.

Best,

**Helen P. Souranoff**

**Subject:** RE: FW: Availability Inquiry - August 20th, 21st, 22nd

Parking will be difficult, no doubt. Classes start at 6:30p and 7p. Anyone taking classes in the evening would be arriving before your event begins most probably.

Would you have any technical details for me to generate a preliminary estimate?

Best,

Hello Helen,

Thank you so much for the fast response. I'm waiting on some confirmations, but I feel that 8/21 may be our date. The event would be from approximately 7 to 9 in the evening. Do you think that parking (and first week chaos) would be an issue that late in the evening? (It's been awhile since I was in college, so I'm not sure how these things go these days!)

Thanks again,

Heather

Hi Eliza,

I've attached the list of Deferred Revenue accounts, and I request that you enter the Deferred Revenue Journal. This should be completed as it was for 11/12 - 38430-2652 was Debited, and 38430-5858 was credited. (Virginia crossed out 38430-5858 and replaced it with the Controller's 00001-0780 last year). I have PDF'd POST reports for each of these contracts, so please let me know if you (or Controllers) need to see them.

Please let me know if you have any questions, or if you need anything further from me. (Perhaps a signature?) Thank you once again for all of your help.

Heather

**Subject:** Question: June Billing for County of San Mateo

Hello Mr. Wilson,

I hope you can help with a question in regards to the Ascension Heights project - if not please refer me to the correct person. By noon tomorrow, I need to notify the County's Controller if there were any billable hours through June 30, 2013 aside from the \$5,974 we have already been billed and have paid.

Please respond at your earliest opportunity. Thank you!

Heather

**Subject:** Re: Deferred Revenue Journal

Hi Heather,

The attached PO#P1305592 showed a zero balance. On the transaction listing report, it showed that you received \$124,352.34 (CR244013) from Ascension Heights Development. You made a payment of \$5,974. So \$124,352.34 minus \$5,974 equals \$118,378.34. But your spreadsheet showed the deferred revenue is \$107,101. The difference is \$11,277.34. Do I miss something? Please let me know.

Thanks,  
Eliza

>>> Heather Hardy 7/11/2013 4:15 PM >>>

Hi Eliza,

They are attached. The other piece of potential backup I can think that might be needed is a transaction listing for 38430-2652 that shows the receipt of all of this revenue, so please let me know if you want that too.

Thanks again,  
Heather

>>> Eliza Tam 7/11/2013 4:12 PM >>>

Hi Heather,

If you don't mind, can you send me the POST reports for each contracts?

Thanks,  
Eliza

**Attachments:** #28\_Analytical Environment\_Reso#072499\_1.pdf

Hi Eliza,

I'm sorry - I should have explained. When we receive a contract of this type, the applicant gives us 110% of the contract's value. The AES/Ascension Heights Contract is for \$113,075. (Executed BoS Agreement is attached). I used \$107,101 (\$113,075 - \$5,974) because that is what should be appropriated to pay the remainder of the contract in FY13-14.

(For the TRA Edgewood Contract, you will also note that the contract total is \$53,000 and we received \$58,300 or 110%).

There's now a small update to this - I just contacted AES one more time to make sure that we have all of the June billing. They do have more June hours and hadn't billed it out to us yet. They are working to get a total ASAP. I believe that I will need to subtract that total from the Deferred Revenue, and we will need to do an Expense Accrual JE.

I'll update you as soon as I can. I'm in an 11-12 meeting so will be away from my desk. Please let me know if you have any additional questions.

Thank you,  
Heather

**AGREEMENT BETWEEN THE COUNTY OF SAN MATEO AND  
ANALYTICAL ENVIRONMENTAL SERVICES**

THIS AGREEMENT, entered into this 7 day of May 2013, by and between the COUNTY OF SAN MATEO, hereinafter called "County," and Analytical Environmental Services, hereinafter called "Contractor."

W I T N E S S E T H:

WHEREAS, pursuant to Government Code, Section 31000, County may contract with independent contractors for the furnishing of such services to or for County or any Department thereof;

WHEREAS, it is necessary and desirable that Contractor be retained for the purpose of preparing an Environmental Impact Report for the proposed Ascensions Heights subdivision project (County File number PLN2002-00517) to be re-circulated.

**NOW, THEREFORE, IT IS HEREBY AGREED BY THE PARTIES HERETO AS FOLLOWS:**

**1. Exhibits and Attachments**

The following exhibits and attachments are included hereto and incorporated by reference herein:

- Exhibit A—Services
- Exhibit B—Payments and rates
- Exhibit C—Scope of Work

**2. Services to be performed by Contractor**

In consideration of the payments set forth herein and in Exhibit "B," Contractor shall perform services for County in accordance with the terms, conditions and specifications set forth herein and in Exhibit "A."

**3. Payments**

In consideration of the services provided by Contractor in accordance with all terms, conditions and specifications set forth herein and in Exhibit "A," County shall make payment to Contractor based on the rates and in the manner specified in Exhibit "B." The County reserves the right to withhold payment if the County determines that the quantity or quality of the work performed is unacceptable. In no event shall the County's total fiscal obligation under this Agreement exceed One Hundred Thirteen Thousand Seventy-Five Dollars, \$113,075.

**4. Term and Termination**

Subject to compliance with all terms and conditions, the term of this Agreement shall be from May 9, 2013 through May 9, 2014.

This Agreement may be terminated by Contractor, the Director of Community Development or his/her designee at any time without a requirement of good cause upon thirty (30) days' written notice to the other party.

In the event of termination, all finished or unfinished documents, data, studies, maps, photographs, reports, and materials (hereafter referred to as materials) prepared by Contractor under this Agreement shall become the property of the County and shall be promptly delivered to the County. Upon termination, the Contractor may make and retain a copy of such materials. Subject to availability of funding, Contractor shall be entitled to receive payment for work/services provided prior to termination of the Agreement. Such payment shall be that portion of the full payment which is determined by comparing the work/services completed to the work/services required by the Agreement.

**5. Availability of Funds**

The County may terminate this Agreement or a portion of the services referenced in the Attachments and Exhibits based upon unavailability of Federal, State, or County funds, by providing written notice to Contractor as soon as is reasonably possible after the County learns of said unavailability of outside funding.

**6. Relationship of Parties**

Contractor agrees and understands that the work/services performed under this Agreement are performed as an independent Contractor and not as an employee of the County and that Contractor acquires none of the rights, privileges, powers, or advantages of County employees.

**7. Hold Harmless**

Contractor shall indemnify and save harmless County, its officers, agents, employees, and servants from all claims, suits, or actions of every name, kind, and description, brought for, or on account of: (A) injuries to or death of any person, including Contractor, or (B) damage to any property of any kind whatsoever and to whomsoever belonging, (C) any sanctions, penalties, or claims of damages resulting from Contractor's failure to comply with the requirements set forth in the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and all Federal regulations promulgated thereunder, as amended, or (D) any other loss or cost, including but not limited to that caused by the concurrent active or passive negligence of County, its officers, agents, employees, or servants, resulting from the performance of any work required of Contractor or payments made pursuant to this Agreement, provided that this shall not apply to injuries or damage for which County has been found in a court of competent jurisdiction to be solely liable by reason of its own negligence or willful misconduct.

The duty of Contractor to indemnify and save harmless as set forth herein, shall include the duty to defend as set forth in Section 2778 of the California Civil Code.

**8. Assignability and Subcontracting**

Contractor shall not assign this Agreement or any portion thereof to a third party or subcontract with a third party to provide services required by contractor under this Agreement without the prior written consent of County. Any such assignment or subcontract without the County’s prior written consent shall give County the right to automatically and immediately terminate this Agreement.

**9. Insurance**

The Contractor shall not commence work or be required to commence work under this Agreement unless and until all insurance required under this paragraph has been obtained and such insurance has been approved by Risk Management, and Contractor shall use diligence to obtain such insurance and to obtain such approval. The Contractor shall furnish the County with certificates of insurance evidencing the required coverage, and there shall be a specific contractual liability endorsement extending the Contractor's coverage to include the contractual liability assumed by the Contractor pursuant to this Agreement. These certificates shall specify or be endorsed to provide that thirty (30) days' notice must be given, in writing, to the County of any pending change in the limits of liability or of any cancellation or modification of the policy.

(1) **Worker's Compensation and Employer's Liability Insurance** The Contractor shall have in effect during the entire life of this Agreement Workers' Compensation and Employer's Liability Insurance providing full statutory coverage. In signing this Agreement, the Contractor certifies, as required by Section 1861 of the California Labor Code, that it is aware of the provisions of Section 3700 of the California Labor Code which requires every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of the Code, and will comply with such provisions before commencing the performance of the work of this Agreement.

(2) **Liability Insurance** The Contractor shall take out and maintain during the life of this Agreement such Bodily Injury Liability and Property Damage Liability Insurance as shall protect him/her while performing work covered by this Agreement from any and all claims for damages for bodily injury, including accidental death, as well as any and all claims for property damage which may arise from contractors operations under this Agreement, whether such operations be by himself/herself or by any sub-contractor or by anyone directly or indirectly employed by either of them. Such insurance shall be combined single limit bodily injury and property damage for each occurrence and shall be not less than the amount specified below.

Such insurance shall include:

- |   |             |
|---|-------------|
| (a) Comprehensive General Liability . . . . .   | \$1,000,000 |
| (b) Motor Vehicle Liability Insurance . . . . . | \$1,000,000 |
| (c) Professional Liability . . . . .            | \$1,000,000 |

County and its officers, agents, employees and servants shall be named as additional insured on any such policies of insurance, which shall also contain a provision that the insurance afforded thereby to the County, its officers, agents, employees and servants shall be primary insurance to the full limits of liability of the policy, and that if the County or its officers and employees have other insurance against the loss covered by such a policy, such other insurance shall be excess insurance only.

In the event of the breach of any provision of this section, or in the event any notice is received which indicates any required insurance coverage will be diminished or canceled, the County of San Mateo at its option, may, notwithstanding any other provision of this Agreement to the contrary, immediately declare a material breach of this Agreement and suspend all further work pursuant to this Agreement.

**10. Compliance with laws; payment of Permits/Licenses**

All services to be performed by Contractor pursuant to this Agreement shall be performed in accordance with all applicable Federal, State, County, and municipal laws, ordinances and regulations, including, but not limited to, the Health Insurance Portability and Accountability Act of 1996 (HIPAA), and the Federal Regulations promulgated thereunder, as amended, and will comply with the Business Associate requirements set forth in Attachment "H," and the Americans with Disabilities Act of 1990, as amended, and Section 504 of the Rehabilitation Act of 1973, as amended and attached hereto and incorporated by reference herein as Attachment "I," which prohibits discrimination on the basis of handicap in programs and activities receiving any Federal or County financial assistance. Such services shall also be performed in accordance with all applicable ordinances and regulations, including, but not limited to, appropriate licensure, certification regulations, provisions pertaining to confidentiality of records, and applicable quality assurance regulations. In the event of a conflict between the terms of this Agreement and State, Federal, County, or municipal law or regulations, the requirements of the applicable law will take precedence over the requirements set forth in this Agreement. Further, Contractor certifies that the Contractor and all of its subcontractors will adhere to all applicable provisions of Chapter 4.106 of the San Mateo County Ordinance Code, which regulates the use of disposable food service ware.

Contractor will timely and accurately complete, sign, and submit all necessary documentation of compliance.

**11. Non-Discrimination and Other Requirements**

- A. *Section 504 applies only to Contractors who are providing services to members of the public.* Contractor shall comply with § 504 of the Rehabilitation Act of 1973, which provides that no otherwise qualified handicapped individual shall, solely by reason of a disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination in the performance of this Agreement.
- B. *General non-discrimination.* No person shall, on the grounds of race, color, religion, ancestry, gender, age (over 40), national origin, medical condition (cancer), physical or mental disability, sexual orientation, pregnancy, childbirth or related medical condition, marital status, or political affiliation be denied any benefits or subject to discrimination under this Agreement.

- C. *Equal employment opportunity.* Contractor shall ensure equal employment opportunity based on objective standards of recruitment, classification, selection, promotion, compensation, performance evaluation, and management relations for all employees under this Agreement. Contractor's equal employment policies shall be made available to County of San Mateo upon request.
- D. *Violation of Non-discrimination provisions.* Violation of the non-discrimination provisions of this Agreement shall be considered a breach of this Agreement and subject the Contractor to penalties, to be determined by the County Manager, including but not limited to
  - i) termination of this Agreement;
  - ii) disqualification of the Contractor from bidding on or being awarded a County contract for a period of up to 3 years;
  - iii) liquidated damages of \$2,500 per violation;
  - iv) imposition of other appropriate contractual and civil remedies and sanctions, as determined by the County Manager.

To effectuate the provisions of this section, the County Manager shall have the authority to examine Contractor's employment records with respect to compliance with this paragraph and/or to set off all or any portion of the amount described in this paragraph against amounts due to Contractor under the Contract or any other Contract between Contractor and County.

Contractor shall report to the County Manager the filing by any person in any court of any complaint of discrimination or the filing by any person of any and all charges with the Equal Employment Opportunity Commission, the Fair Employment and Housing Commission or any other entity charged with the investigation of allegations within 30 days of such filing, provided that within such 30 days such entity has not notified Contractor that such charges are dismissed or otherwise unfounded. Such notification shall include the name of the complainant, a copy of such complaint, and a description of the circumstance. Contractor shall provide County with a copy of their response to the Complaint when filed.

- E. *Compliance with Equal Benefits Ordinance.* With respect to the provision of employee benefits, Contractor shall comply with the County Ordinance which prohibits contractors from discriminating in the provision of employee benefits between an employee with a domestic partner and an employee with a spouse.
- F. The Contractor shall comply fully with the non-discrimination requirements required by 41 CFR 60-741.5(a), which is incorporated herein as if fully set forth.

## **12. Compliance with Contractor Employee Jury Service Ordinance**

Contractor shall comply with the County Ordinance with respect to provision of jury duty pay to employees and have and adhere to a written policy that provides that its employees shall receive from the Contractor, on an annual basis, no less than five days of regular pay for actual jury service in San Mateo County. The policy may provide that employees deposit any fees received for such jury service with the Contractor or that the Contractor deduct from the employees' regular pay the fees received for jury service.

**13. Retention of Records, Right to Monitor and Audit**

(a) CONTRACTOR shall maintain all required records for three (3) years after the COUNTY makes final payment and all other pending matters are closed, and shall be subject to the examination and/or audit of the County, a Federal grantor agency, and the State of California.

(b) Reporting and Record Keeping: CONTRACTOR shall comply with all program and fiscal reporting requirements set forth by appropriate Federal, State and local agencies, and as required by the COUNTY.

(c) CONTRACTOR agrees to provide to COUNTY, to any Federal or State department having monitoring or review authority, to COUNTY's authorized representatives, and/or their appropriate audit agencies upon reasonable notice, access to and the right to examine all records and documents necessary to determine compliance with relevant Federal, State, and local statutes, rules and regulations, and this Agreement, and to evaluate the quality, appropriateness and timeliness of services performed.

**14. Merger Clause**

This Agreement, including the Exhibits attached hereto and incorporated herein by reference, constitutes the sole Agreement of the parties hereto and correctly states the rights, duties, and obligations of each party as of this document's date. In the event that any term, condition, provision, requirement or specification set forth in this body of the agreement conflicts with or is inconsistent with any term, condition, provision, requirement or specification in any exhibit and/or attachment to this agreement, the provisions of this body of the agreement shall prevail. Any prior agreement, promises, negotiations, or representations between the parties not expressly stated in this document are not binding. All subsequent modifications shall be in writing and signed by the parties.

**15. Controlling Law and Venue**

The validity of this Agreement and of its terms or provisions, as well as the rights and duties of the parties hereunder, the interpretation, and performance of this Agreement shall be governed by the laws of the State of California. Any dispute arising out of this Agreement shall be venued either in the San Mateo County Superior Court or in the United States District Court for the Northern District of California.

**16. Notices**

Any notice, request, demand, or other communication required or permitted hereunder shall be deemed to be properly given when both (1) transmitted via facsimile to the telephone number listed below and (2) either deposited in the United State mail, postage prepaid, or when deposited for overnight delivery with an established overnight courier that provides a tracking number showing confirmation of receipt, for transmittal, charges prepaid, addressed to:

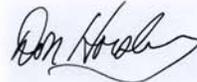

**In the case of County, to:**  
Director of Community Development  
Planning & Building Department  
455 County Center, Mail Drop PLN122  
Redwood City, CA 94063

**In the case of Contractor, to:**  
Analytical Environmental Services  
1801 7<sup>th</sup> Street, Ste 100  
Sacramento, CA 95811

In the event that the facsimile transmission is not possible, notice shall be given both by United States mail and an overnight courier as outlined above.

IN WITNESS WHEREOF, the parties hereto, by their duly authorized representatives, have affixed their hands.

COUNTY OF SAN MATEO

By: \_\_\_\_\_  
President, Board of Supervisors, San Mateo County

Date: May 7, 2013

ATTEST:   
By: \_\_\_\_\_  
Clerk of Said Board

Analytical Environmental Services (AES)  
  
\_\_\_\_\_  
Contractor's Signature

Date: 12-11-12

Resolution #072499

Exhibit "A"

In consideration of the payments set forth in Exhibit "B", Contractor shall provide the following services:

Contractor shall complete the preparation of an Environmental Impact Report for the proposed Ascensions Heights project (County File number PLN2002-00517) to be re-circulated. A complete Scope of Work is included in Exhibit C.

Exhibit "B"

In consideration of the services provided by Contractor in Exhibit "A", County shall pay Contractor based on the following fee schedule in attached Exhibit "B":

# EXHIBIT B - SCHEDULE OF CHARGES

AES schedule of hourly wage rates for the listing the labor categories, associated wage rates, and reimbursable expenses have been provided below.

Employee Category	Hourly Billing Rate
Principal	\$245
<b>Project Manager</b>	<b>\$140</b>
Analyst III	\$120
<b>Analyst II</b>	<b>\$110</b>
<b>Analyst I</b>	<b>\$105</b>
Cultural Resources Specialist	\$120
<b>Archaeologist III</b>	<b>\$110</b>
Archaeologist II	\$105
Archaeologist I	\$100
<b>Biologist III</b>	<b>\$120</b>
Biologist II	\$110
Biologist I	\$105
Sr. Graphic Designer	\$105
<b>Graphic Designer II</b>	<b>\$100</b>
Graphic Designer I	\$95
Office Administrator	\$100
Administrative Assistant III	\$90
Administrative Assistant II	\$85
<b>Administrative Assistant I</b>	<b>\$80</b>

Direct Costs	
Postage/Overnight Mail	Actual cost + 15%
Courier Charges	Actual cost + 15%
Mileage	Federal Rate - currently \$0.55 per mile + 15%
Other Direct Costs	Actual cost + 15%
In-house Copying Charges:	
Black & White	\$0.10 per page + 15%
Color	\$1 per page + 15%
CD duplication w/label & case	\$2.50 each + 15%

# EXHIBIT C - SCOPE OF WORK

## Project Understanding

The **Ascension Heights Subdivision Project (Proposed Project)** entails a request by the project proponent for the County of San Mateo to approve subdivision of six parcels on 21.13 acres into 21 lots for development of 19 single-family residences with the remaining 2 lots (approximately 7.81-acres) maintained as a conservation area. The project site is located adjacent to Ascension Drive and Bel Aire Road in unincorporated San Mateo County, approximately 0.87 miles north east of Highway 280 and 0.51 miles west of highway 92. Potable water would be provided by connection to the Mid-Peninsula Water District and wastewater collection would be provided by the Crystal Springs Sanitation District with treatment at the City of San Mateo Wastewater Treatment Plant. Development of the 19 subdivided lot into single-family residences would require 40,920 cubic yards of grading, of which 28,270 cubic yards would require exportation from the site. Accordingly, the project applicant also requires a grading permit from the County. Based on the size of the development, a Water Supply Assessment is not required for the Proposed Project. One significant consideration is the Cease and Desist Order (CDO) issued by the San Francisco Bay Regional Water Quality Control Board to the City of San Mateo, town of Hillsborough, and Crystal Springs County Sanitation District. The CDO was issued as a result of high infiltration rates of non wastewater during wet weather into the wastewater conveyance system resulting in associated decreases in sewage conveyance capacity which lead to unregulated releases of wastewater to surface waters. This issue will be addressed in the Draft EIR.

The Proposed Project is a re-design of a previous project that was denied by the San Mateo County Planning Commission in 2009. A Draft Environmental Impact Report (Draft EIR) and Final Environmental Impact Report (Final EIR) were prepared for the previously proposed project. The scope of services will utilize, to the extent feasible, existing information from the previous environmental process to provide a Revised EIR that meets the current CEQA guidelines as well as current legal precedent for the analysis of environmental impacts developed through CEQA case law.

## Scope of Services

### *Program Description*

The overall objective and focus of the work plan outlined below is the efficient preparation of a Revised EIR that meets the legal requirements of a complete, adequate, and objective statement of the Proposed Project's environmental consequences while incorporating background information and analysis prepared during the previous EIR process to the extent feasible and reasonable in a cost effective manner. The resulting Revised EIR document will provide a concise, integrated source of information for the public, county decision makers, and other permitting agencies including the California Department of Fish and Game, U.S. Army Corps of Engineers, and the Regional Water Quality Control Board.

## *County Direction*

AES works as an extension of County staff. Our Project Manager would take direction from the assigned County Project Manager. In this role, AES will pro-actively assist with meeting the stated project objectives by maintaining an up-to-date schedule that indicates deliverable due dates and responsible parties. AES has enjoyed similar working relationships with a variety of federal, state, and municipal agencies.

## *Proposed Course of Action*

**Task 1: Kick-Off Meeting, Project Initiation and Information Review.** AES will meet with the County to establish lines of communication, determine the nature and format of the document to be prepared, and obtain relevant documentation and project details. Following this meeting, AES will review all project documentation and related planning materials, including the additional information for the previous EIR that may not have been provided during development of this Scope of Work, and available planning documents including General Plan materials, utility master plans, the County's subdivision regulations, tree regulations, and the Countywide Transportation Plan. Following this review, AES will develop a final project schedule and work plan that meets the needs of the County.

**Deliverables:** AES will prepare a final work plan and schedule to be distributed to the project team via email within five (5) days of the project initiation meeting.

**Task 2: Initial Study, NOP and Scoping.** Following the project initiation meeting, AES will prepare a draft Initial Study (IS) that includes a checklist consistent with Appendix G of the CEQA Guidelines and County guidance. The IS will be used to screen nonsignificant environmental issues from further consideration within the EIR. Following completion of the IS, AES will prepare a Notice of Preparation (NOP). Flexibility will be built into the NOP in anticipation of minor adjustments to project layout and design. This Scope of Work assumes that the County will coordinate circulation of the IS/NOP to the public. AES's Sacramento Office is located mere blocks from the State Clearinghouse and can readily deliver the IS/NOP in a cost effective manner. AES will attend and provide environmental expertise at one public town hall/scoping meeting during the 30-day public review period starting with release of the NOP. It is assumed that the County will be responsible for reserving an appropriate venue for the meeting. AES shall prepare up to 4 poster board exhibits for the public town hall/scoping meeting.

**Deliverables:** AES will provide the County with an electronic version of the IS. AES will revise the IS based on a comprehensive set of comments received on the electronic version from the County. The IS will be included as an appendix to the Administrative Draft EIR. AES will provide an electronic copy of the draft NOP to the County for review. AES will revise the NOP based on a comprehensive set of comments received on the electronic version from the County. AES will provide electronic copies of the proposed poster board exhibits prior to the public town hall/scoping meeting for approval.

**Task 3: Administrative Draft Revised EIR Preparation.** AES will conduct field studies and analysis as necessary to prepare an Administrative Draft EIR (ADEIR) in accordance with the State CEQA Guidelines, and relevant case law. AES will review the results of the IS and scoping comments submitted during the NOP comment period to focus the EIR analysis on those issues that are identified as potentially significant. AES will prepare a summary list of relevant issues to be addressed within the project analysis and consult with the County regarding any revisions to the scope of EIR services, if necessary. Given the nature of the Proposed Project, AES anticipates the EIR will be rather comprehensive, with sections analyzing the direct, indirect, and cumulative effects associated with each of the following issue areas:

- Aesthetics
- Agricultural Resources
- Air Quality and Greenhouse Gases
- Biological Resources
- Cultural Resources
- Geology and Soils
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population and Housing
- Public Services
- Recreation
- Utilities and Service Systems
- Transportation and Traffic

As Lead Agency, the County will make the final determination regarding the content of the EIR. Upon award of the contract, AES and the County would consider each issue area and draft a more detailed work plan that clearly outlines the expectations of the County and the obligations of AES.

**Deliverables:** AES will provide the County with a total of three (3) bound hardcopies and one (1) CD copy in color PDF format of the ADEIR.

### *ADEIR Contents*

Executive Summary. This section will provide an overview of the Draft EIR (DEIR) and include a summary table of all identified environmental effects, mitigation, and the significance level of impacts before and after mitigation.

Introduction. This section will explain the applicability of CEQA to the Proposed Project, describes the CEQA public review process, summarizes significant issues raised during the scoping process, and outlines the organization of the EIR.

Project Description. This section will present the background of the Proposed Project and identify the County's objectives in pursuing the project. AES will incorporate detailed project information and exhibits provided by the Applicant and County to describe each component of the Proposed Project in sufficient detail to enable identification of the largest envelope of potential environmental impacts. All anticipated approvals, permits, and other actions that will rely on the EIR will be identified.

Environmental Setting and Analysis. Considered the heart of the EIR, this section will provide a separate subsection for each environmental issue area in which a potentially significant impact was identified during the IS and scoping process. Each issue area subsection will discuss the existing setting, regulatory framework, analysis methods and thresholds, anticipated project-related impacts, and recommended mitigation measures to reduce or avoid adverse effects.

Cumulative Impacts. AES will assess the cumulative impacts of the Proposed Project in connection with other reasonably foreseeable projects and build-out of the County's General Plan. If available, the cumulative analysis will also consider growth projections anticipated in the County's on-going General Plan Update. AES will work with the County and relevant agencies to develop a list of relevant projects and define the geographical scope of the cumulative analysis. Cumulative analysis will cover each issue area addressed under the Environmental Setting and Analysis section of the EIR. Anticipated project-related cumulative impacts will be identified and mitigation measures will be recommended to reduce or avoid adverse effects.

Project Alternatives. In accordance with CEQA Guidelines Section 15126.6, AES will work with the County and Applicant to develop up to four (4) alternatives that could feasibly attain most of the basic objectives of the Proposed Project and would substantially lessen one or more of the project's significant environmental effects. The following alternatives may be considered as part of this process, although it is anticipated that one or more may be eliminated from detailed consideration due to the increased potential for environmental impacts:

1. No Project Alternative. As required by CEQA, one of the alternatives will be a No Project Alternative. This alternative will assume that the Proposed Project would not occur. While it is anticipated that some environmental impacts would be reduced, the basic objectives of the project would not be accomplished and may result in greater effects associated with water quality and noncompliance with permit requirements.
2. Reduced Footprint Alternative. AES will work with the County to identify a mitigated project footprint alternative within the boundaries of the project site. It is anticipated that a reconfiguration of land uses and clustering of high density residential development would accomplish the goals of this alternative.
3. Reduced Density Alternative. AES will work with the County to define a reduced density alternative that would result in fewer residents on the project site, and thus fewer demands on public utilities and infrastructure.

According to CEQA Guidelines Section 15126.6(d), “the significant effects of an alternative shall be discussed, but in less detail than the significant effects of the project as proposed.” The assessment of project alternatives will be consistent with this requirement by presenting a sufficient amount of detail necessary to afford decision makers with a reasoned choice. In most cases, environmental analyses conducted for the Proposed Project will be applicable to alternative development scenarios. Qualitative analysis of air quality and noise impacts associated with project alternatives will be conducted.

### *Issue Area Analysis and Assumptions*

Aesthetics. Development of the Proposed Project would alter the visual character of the project site from open space to urban; however, the surrounding areas consist of housing developments of similar density and therefore impacts are anticipated to be less than significant. Using visual representations of the project to be provided by the Applicant and existing analysis from the 2009 EIR to the extent possible, AES will complete the following tasks to determine the level of potential impacts and the need for mitigation:

- Review the relevant visual quality standards contained in the County’s General Plan and consider the applicability of planning policies and ordinances related to aesthetics.
- Conduct reconnaissance field studies to assess the visual character of the project site and surrounding public view areas. Document existing visual conditions on the project site through photographs and detailed descriptions.
- Incorporate the existing three dimensional visual design exhibits of the proposed facilities prepared by Lea and Braze Engineering, Inc. for the Applicant into site and aerial photographs of the project site to assess impacts to aesthetics and viewsheds of the project region.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the aesthetics section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts and ensure consistency with relevant visual quality standards of the County’s General Plan.

Air Quality. Development of the Proposed Project would result in short-term emissions and fugitive dust during the construction phase and long-term emissions associated with vehicle traffic. AES will complete the following tasks to determine the level of potential air quality impacts and the need for mitigation.

- Review relevant local/regional air quality standards for the project area, including those issued by the Bay Area Air Quality Management District (AQMD) and California Air Resources Board (CARB).
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including the Federal Clean Air Act and California Clean Air Act.
- Document existing sources of air pollution and identify sensitive receptors that may be affected by development of the Proposed Project.
- AES will conduct a HRA for the Proposed Project. The assessment will use accepted County or Air District protocols to determine the necessity for dispersion modeling. AES will use either AeMOD

or CAL3QHCR modeling software to estimate concentrations at defined receptor locations and will consult with the Air District and County to determine the appropriate level of analysis.

- Identify short-term air quality impacts from construction emissions using CARB-approved URBEMIS- modeling software. In order to estimate construction emissions, AES will coordinate with the County and Applicant to acquire information regarding the nature of construction activities, types of equipment that will likely be used, and the anticipated total area of disturbance.
- Identify long-term regional air quality impacts from mobile and area source emissions using CARB approved URBEMIS modeling software. This analysis will include quantification of criteria air pollutants identified in the local air quality management plans and shall be conducted according to district methodologies. Mobile source emissions will be estimated using vehicle trip generation and distribution information provided in the traffic study prepared by RKH.
- Quantify greenhouse gas emissions as recommended within the recent amendments to the CEQA Guidelines. In accordance with this guidance, AES will provide a qualitative, performance based approach to reducing impacts. This effort will be closely coordinated within the County's General Plan Update Process to ensure consistent methodology and thresholds are being applied.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the air quality section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts from both construction and operation of the Proposed Project. Modeling runs will be included as an appendix to the EIR.

Agricultural Resources. The Proposed Project would not result in the conversion of prime agricultural land. Additionally, no Williamson Act contracts are held on the subject parcels. AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process. Should it be determined that Agricultural Resources should be included within the EIR, AES will complete the following tasks using the existing analysis from the 2009 EIR to the extent possible to determine the level of potential impacts to agricultural resources and the need for mitigation:

- Review the relevant local policies concerning the protection of farmlands, including those contained in the County General Plan and General Plan Update.
- Describe and map the important agricultural soils in the project area including Prime Farmland, Farmland of Statewide Importance and Unique Farmland.
- Review information on existing agricultural resource in the region and current urbanization trends.
- AES anticipates that Agricultural Resources may be excluded from the EIR through the IS process.

Biological Resources. Development of the Proposed Project has the potential to impact special-status species and other biological resources, including the endangered Mission Blue Butterfly. This scope of work does not provide for protocol-level biological surveys or permitting. AES will complete the following tasks to determine the level of potential biological impacts and the need for mitigation:

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Federal Endangered Species Act, Fish and Wildlife Coordination Act, Migratory Bird Treaty Act, Clean Water Act (Sections 401 and 404), Magnuson Fisheries-Stevens Fishery

Conservation and Management Act, California Endangered Species Act, California Fish and Game Code, and Porter-Cologne Water Quality Control Act.

- Review existing information related to biological resources included within the Biological Resources Assessment prepared for the 2009 EIR.
- Conduct an updated query of the California Natural Diversity Database/RareFind, California Native Plant Society's Electronic Inventory, and the California Wildlife-Habitat Relationships database, and obtain current special-status species lists for the project area from the U.S. Fish and Wildlife Service (USFWS).
- Conduct a biological field survey of the project site to establish the potential for occurrences of special-status species or critical habitat and confirm the findings of the Biological Resources Assessment prepared by the Applicant.
- Incorporate information from existing studies and findings into the biological resources section of the EIR and recommend avoidance or mitigation measures to reduce any potentially significant impacts. In coordination with the County, AES will informally consult with USFWS and the California Department of Fish and Game to refine mitigation measures and meet regulatory requirements. This coordination will promote an efficient environmental review process for the Proposed Project.

Cultural Resources. Development of the Proposed Project could result in adverse impacts to previously documented, newly identified, or inadvertently discovered cultural resources. Preliminary site reconnaissance indicates that the project site has been substantially disturbed from agricultural activities; however, impacts to unanticipated archaeological resources discovered during construction are always a possibility. AES will complete the following tasks during preparation of the cultural resources section of the EIR.

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: CEQA Guidelines 15064.5 and PRC 21083.2, SB-18 – Tribal Consultation (required for General Plan Amendment), Section 106 of the National Historic Preservation Act (required for 404 permits)
- Conduct an updated records search at the Northwest Information Center of the California Historical Resources Information System.
- Request a sacred lands search and stakeholders list from the Native American Heritage Commission (NAHC). AES will send preliminary consultation letters to all Native American stakeholders identified by the NAHC.
- Conduct an intensive Phase-I pedestrian survey of the project site. The survey will include recordation of any newly identified sites on appropriate DPR forms. Records of previously identified sites will be updated if necessary. This scope of work assumes that no more than two relatively simple resources will require recordation or updating. Evaluation of site significance is not included in the enclosed cost estimate. If it is determined that identified site(s) need to be evaluated, AES will provide a detailed scope of work and cost estimate for this work.

- Assist the County with SB-18 consultation. SB-18 assistance will include identification of stakeholders, provision of invitation to consult language, and attendance at up to two meetings with tribal representatives.
- Conduct all surveys and records searches in compliance with Section 106 of National Historic Preservation Act in the event that federal permitting is required.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the cultural resources section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts. This Scope of Work does not provide for testing or data recovery of any identified archaeological sites.

Geology and Soils. Development of the Proposed Project has the potential to result in soil erosion or subject people or property to geologic or seismic risks. AES is teaming with Michelucci and Associates to conduct an Updated Geotechnical Study to supplement the geotechnical study they prepared for the 2009 EIR. AES will complete the following tasks during preparation of the geology and soils section of the EIR:

- Review the relevant local and regional planning policies and ordinances related to geology, soils and seismic hazards within the project area, including those contained in the County's General Plan.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Soil and Water Conservation Act, National Earthquake Hazards Reduction Program, Alquist-Priolo Earthquake Fault Zoning Act, Seismic Hazards Mapping Act, and California Building Standards Code.
- Identify soils types within the project area based on a review of U.S. Department of Agriculture soils surveys and field investigations to estimate the potential for erosion, settlement, and liquefaction; however, it is assumed that a geotechnical report or other appropriate analysis shall be conducted that determines the shrink/swell potential and stability of the soil to support the proposed facilities prior to construction.
- Review regional/local earthquake fault and seismic hazard maps to determine the potential for seismic related hazards.
- Incorporate findings of the Geotechnical Study prepared by Michelucci and Associates and existing analysis from the 2009 EIR to the extent possible into the geology and soils section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Hazards and Hazardous Materials. Development of the Proposed Project may subject people to hazardous materials or hazards. The majority of the project site has been formerly used for agricultural purposes. AES will complete the following tasks during preparation of the Hazards/Hazardous Materials section of the EIR:

- Review the relevant local and regional planning policies and ordinances related to hazards and hazardous materials within the project area, including those contained in the County's General Plan.

- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: Resources Conservation and Recovery Act, Hazardous and Solid Waste Management Acts, and Comprehensive Environmental Response, Compensation, and Liability Act.
- Request a database search from Environmental Data Services to identify whether the project site is listed on various local, state, or federal hazardous materials databases. AES will also search online database resources regarding facilities or sites identified as meeting the “Cortese List” requirements pursuant to Government Code Section 65962.5.
- AES will research historic land usage within and adjacent to the project site, including review of historic topographic maps and aerial photographs.
- AES will incorporate findings and existing analysis from the 2009 EIR to the extent possible into the hazards and hazardous materials section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Hydrology and Water Quality. Development of the Proposed Project would alter the existing drainage patterns on the project site during both construction and operation, potentially impacting run-off quantity and quality. AES understands that Lea and Braze have already completed an updated hydrological evaluation of the project site to assess drainage impacts associated with the development of impervious surfaces on the project site. AES will complete the following tasks during preparation of the Hydrology and Water Quality Section of the EIR:

- Review existing information concerning water quality in the project area and consider the applicability of relevant local/regional planning policies and ordinances.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including the Clean Water Act and Porter-Cologne Water Quality Act.
- Identify flood hazards on the site or in the immediate project area through Review of FEMA Flood Insurance maps, the proposed flood protection/prevention measures of the project (if needed), and determine residual effects on localized or downstream flooding.
- Peer review drainage plans, estimates of storm water volumes, and existing system capacities provided to AES by Lea and Braze during the hydrological study, the County and/or the Applicant.
- Using existing information, identify the general types and sources of water quality changes that may result from the proposed development. Evaluate potential impacts of runoff from the project site on the quality of receiving waters.
- Discuss the need to apply for an NPDES permit for construction activities. Identify guidelines and policies of the SFBRWQCB, U.S. Environmental Protection Agency, and County plans regarding water quality impacts from storm water runoff.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Hydrology and Water Quality section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Land Use and Planning. The Proposed Project would result in the subdivision of the project site for the development of 19 single-family residential units. Implementation of the Proposed Project must be

considered in light of existing policies included within the County's General Plan and General Plan Update. Additionally, the Proposed Project will introduce new land uses that may be incompatible with existing or planned land uses on adjacent properties. Based on an initial review of the General Plan and Land Use designations for the project site, the Proposed Project is consistent with the land use planning documents governing development on the project site and the density of development is consistent with zoning designations. Accordingly, AES anticipates that impacts to Land Use and Planning will be less than significant and no mitigation will be required. To ensure a complete analysis is provided, AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted land use studies associated with the project area and consider the applicability of relevant local/regional planning policies and ordinances.
- Identify existing, approved, and proposed land use and zoning designations within and surrounding the project site.
- Consider the consistency of the Proposed Project with existing applicable planning documents, and include "planning consistency matrix" as an appendix to the EIR.
- Assess potential long-term compatibility issues, as well as short-term issues associated with phased development and non-conforming land uses.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Land Use and Planning section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Noise. Development of the Proposed Project would result in a short-term increase in noise and vibration during the construction phase and would result in long-term noise increases related to traffic and operational activities that may impact sensitive receptors. AES will conduct a noise assessment of the project site and incorporate the analysis and conclusions into the Noise Section of the EIR. AES will complete the following task to determine the level of potential impacts and the need for mitigation.

- Existing Noise Levels: Conduct a detailed ambient noise survey to quantify existing noise conditions at the project site and at the nearest potentially affected noise-sensitive land uses. The survey will consist of continuous and short-term noise level measurements at as many locations deemed necessary to thoroughly identify existing noise conditions for the project area which will include traffic noise from State Route 280 and 92. To the extent that information contained in the 2009 EIR is still relevant, AES will make use of it.
- Prepare Technical Report in Support of the EIR Noise Section that will contain the results of the previous task in the above-described scope of work, as well as graphics showing noise measurement locations and potential noise mitigation locations as appropriate. The report will be included as an appendix to the EIR. AES will incorporate existing analysis from the 2009 EIR to the extent possible.

Public Services and Recreation: Development of the Proposed Project would result in an increased demand for public services and recreation, including public schools, law enforcement, and fire protection. Additionally, the increase in population as a result of the project will result in increased use of County and

regional recreational facilities. AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted studies associated with the project site and consider the applicability of relevant local/regional planning policies and ordinances..
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including:
  - Uniform Fire Code
  - California Health and Safety Code
- AES will update the public service provided questionnaires provided Appendix C of the 2009 Draft EIR. AES will contact local service providers, including the Sheriff's Department, Fire Department, County Parks Department, County Public Libraries, and School Districts to determine existing service levels in the project area and need for additional personnel, equipment, and facilities.
- Estimate the new service demands resulting from the development of the Proposed Project, including the increase in student enrollment, law enforcement demands, fire protection demands, and use of recreational facilities.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Public Services and Recreation section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

Traffic and Circulation: Development of the Proposed Project would result in an increase in local traffic. AES is teaming with RKH for the preparation of a traffic analysis and study for the Proposed Project to determine the potential for adverse effects on traffic circulation and identify appropriate traffic improvements. AES will complete the following tasks during preparation of the transportation/traffic section of the EIR.

- Incorporate findings of the traffic impact analysis into the Transportation and Circulation section of the EIR.
- Assess potential impacts associated with pedestrian, bicycle, and public transportation, and recommend appropriate mitigation measures.
- Discuss potential short-term impacts associated with construction activities. It is anticipated that mitigation will likely include specific measures to be included within a Traffic Control Plan for construction activities.

Utilities and Service Systems: Development of the Proposed Project would result in an increased demand for public utilities, including potable water, wastewater treatment, drainage facilities, and solid waste services. AES is teaming with NV5, formerly Nolte and Associates to assess the potential impacts to sewer and water conveyance systems. The cost and scope assumes that the level of effort required is to update the analysis within the 2009 EIR and no modeling of conveyance capacities are required. AES will assess the potential impacts to other utility and service systems including solid waste, electricity, and telecommunications. AES will complete the following tasks to determine the level of potential impacts and the need for mitigation.

- Review previously conducted studies associated with the 2009 EIR and consider the applicability of relevant local/regional planning policies and ordinances.
- Consider the Proposed Project in light of applicable state/federal regulatory frameworks, including: California Health and Safety Code, Integrated Waste Management Act, Water Management Planning Act, SB 610 – Water Availability Assessment. Based on the number of residential units, a Water Supply Assessment is not required under SB 610, which will be duly noted in the EIR.
- Coordinate with the County’s Public Utilities Department and local service providers to determine existing service levels in the project area.
- Estimate the new service demands resulting from the development of the Proposed Project, including water supply, wastewater, drainage and solid waste.
- Evaluate impacts to wastewater treatment and drainage facilities in light of information provided within NV5’s technical assessment.
- In accordance with thresholds provided in Appendix G of the CEQA Guidelines, evaluate physical environmental impacts resulting from proposed improvements to utility systems, including the any proposed upgrades to Crystal Springs County Special District and San Mateo Wastewater Treatment plant. This task does not include site visits to assess existing conditions of off-site improvements that may be required to update wastewater infrastructure to meet the wastewater demands of the project.
- Incorporate findings and existing analysis from the 2009 EIR to the extent possible into the Public Services and Utilities section of the EIR and recommend appropriate mitigation measures to reduce any significant impacts.

**Task 4: Draft EIR and Public Circulation.** AES will meet with the County to clarify any comments and questions raised during review of the ADEIR. AES will revise the ADEIR based on a single set of comprehensive comments provided by the County. AES will provide an electronic screen check version of the Draft EIR with track changes to the County for review prior to production. Following approval by the County, AES will facilitate preparation of the Notice of Availability (NOA) and public release of the DEIR.

AES technical staff will coordinate and attend one (1) public comment town hall meeting during the 45-day public comment period on the DEIR. AES will provide up to three (3) poster board displays for the meeting. It is assumed that the County will be responsible for reserving an appropriate venue. If desired, a court reporter will be provided by the County.

**Deliverables:** AES will provide the County with ten (10) bound hardcopies one (1) CD copy in color PDF format of the Draft EIR. Fifteen (15) CD copies of the Draft EIR with hardcopies of the Executive Summary will be submitted as required to the State Clearinghouse with the Notice of Availability. AES will provide electronic copies of the proposed poster board exhibits prior to the public town hall meeting for approval.

**Task 5: Final EIR and Mitigation Monitoring and Reporting Plan.** AES will compile comments received from the public and other interested parties during the 45-day public review period for the Draft EIR, and summarize key issues for discussion with the County. AES will meet with County staff to go over the approach for responding to key issues raised during the DEIR public review period. Following this meeting, AES will formulate responses, and make any necessary revisions to the EIR. This Scope of Work assumes a moderate level of effort will be required to respond to comments. A moderate level of effort is considered to be less than 15 comment letters and 50 individual substantive comments that require a response beyond comment noted. The Response to Comments and any refinements to the DEIR text will be incorporated into a “freestanding” Final EIR. AES will prepare a Mitigation Monitoring and Reporting Plan (MMRP) to support the County’s certification of the Final EIR. The MMRP will be referenced within the text of the Final EIR and will be included as an appendix in the final document.

**Deliverables:** AES will provide the County with a total of ten (10) bound hardcopies and one (1) CD copy in PDF format of the Final EIR.

**Task 6: Findings and Final EIR Certification Support.** AES will assist with preparation of the Findings of Fact and Statement of Overriding Considerations. AES will attend/present at one meeting with the Planning Commission, and up to two staff meetings for certification of the Final EIR and Findings and Statement of Overriding Considerations.

**Task 7: Project Management and Meetings.** The AES management team will complete the myriad of small and often unforeseen tasks required to implement the preparation of an EIR. This includes numerous phone calls and emails necessary to facilitate information exchange between the Project Team and jurisdictional agencies, as well as the time required to prepare agendas, meeting minutes, schedules, and other such documents. Under this task, AES will:

- Attend a scoping hearing;
- Participate in up to 3 (3) two-hour project coordination meetings with planning staff at the County offices for the development of the Draft EIR;
- Attend up to two (2) Planning Commission hearings; and
- Participate in up to ten (10) one-hour project related conference calls with members of the project team and jurisdictional agencies.

**Deliverables:** AES will submit monthly status reports to the Project Team via email by the fifth business day of each month. AES will prepare and distribute minutes for each project-related meeting that will outline key decisions and action items.

Hello Mr. Wilson,

I hope you can help with a question in regards to the Ascension Heights project - if not please refer me to the correct person. By noon tomorrow, I need to notify the County's Controller if there were any billable hours through June 30, 2013 aside from the \$5,974 we have already been billed and have paid.

Please respond at your earliest opportunity. Thank you!

Heather

**Subject:** Re: Deferred Revenue Journal

Hi Eliza,

I spoke with Virginia (our Administrative Services Manager who retired in March and used to handle Year End). She pointed out that since we've already disencumbered our contracts, we don't have money left in the PO to pay the new AES statement (it arrived Friday and is for about \$4,000). As a result, we are not changing our deferred revenue total. We will pay this statement when A/P re-opens. I apologize for the confusion. Please proceed with the JE as planned.

Let me know if you have any questions. Thanks!

Heather

>>> Eliza Tam 7/22/2013 11:14 AM >>>

Thank you for the explanation. It is very clear now. So give me the revised number when you are ready.

Thanks,  
Eliza

>>> Heather Hardy 7/22/2013 11:00 AM >>>

Hi Eliza,

I'm sorry - I should have explained. When we receive a contract of this type, the applicant gives us 110% of the contract's value. The AES/Ascension Heights Contract is for \$113,075. (Executed BoS Agreement is attached). I used \$107,101 (\$113,075 - \$5,974) because that is what should be appropriated to pay the remainder of the contract in FY13-14.

(For the TRA Edgewood Contract, you will also note that the contract total is \$53,000 and we received \$58,300 or 110%).

There's now a small update to this - I just contacted AES one more time to make sure that we have all of the June billing. They do have more June hours and hadn't billed it out to us yet. They are working to get a total ASAP. I believe that I will need to subtract that total from the Deferred Revenue, and we will need to do an Expense Accrual JE.

I'll update you as soon as I can. I'm in an 11-12 meeting so will be away from my desk. Please let me know if you have any additional questions.

Thank you,  
Heather

>>> Eliza Tam 7/22/2013 10:51 AM >>>

Hi Heather,

The attached PO#P1305592 showed a zero balance. On the transaction listing report, it showed that you received \$124,352.34 (CR244013) from Ascension Heights Development. You made a payment of \$5,974. So \$124,352.34 minus \$5,974 equals \$118,378.34. But your spreadsheet showed the deferred

revenue is \$107,101. The difference is \$11,277.34. Do I miss something? Please let me know.

Thanks,  
Eliza

>>> Heather Hardy 7/11/2013 4:15 PM >>>

Hi Eliza,

They are attached. The other piece of potential backup I can think that might be needed is a transaction listing for 38430-2652 that shows the receipt of all of this revenue, so please let me know if you want that too.

Thanks again,  
Heather

>>> Eliza Tam 7/11/2013 4:12 PM >>>

Hi Heather,

If you don't mind, can you send me the POST reports for each contracts?

Thanks,  
Eliza

>>> Heather Hardy 7/11/2013 3:49 PM >>>

Hi Eliza,

I've attached the list of Deferred Revenue accounts, and I request that you enter the Deferred Revenue Journal. This should be completed as it was for 11/12 - 38430-2652 was Debited, and 38430-5858 was credited. (Virginia crossed out 38430-5858 and replaced it with the Controller's 00001-0780 last year). I have PDF'd POST reports for each of these contracts, so please let me know if you (or Controllers) need to see them.

Please let me know if you have any questions, or if you need anything further from me. (Perhaps a signature?) Thank you once again for all of your help.

**Subject:** RE: FW: Availability Inquiry - August 20th, 21st, 22nd

Hello again Helen,

I'm still working out about finding out the mic quantity and configuration. I'll update you as soon as I can. In light of the potential first week of school chaos, we are considering changing our dates. Are September 25 and/or 26th available?

Thank you again,

Heather

>>> "Souranoff, Helen P." <souranoff@smccd.edu> 7/17/2013 11:22 AM >>>

Attached is a preliminary contract to get the ball rolling on the requirements.  
Please look over and inform if any adjustments are needed.  
As to the microphones, how many? As in, will this be a panel discussion, or a q/a or both? Podium placement?  
Thank you.

Best,

## Helen P. Souranoff

**Subject:** RE: FW: Availability Inquiry - August 20th, 21st, 22nd

Hello Helen,

I apologize for the delay - your message was in my "Spam" folder. I've filled in the missing information below.

Info needed for preliminary contract:

Date: August 21st, 2013 (We could potentially use August 20th. Do you have a recommendation about if traffic/parking would be the same or worse/better if we changed dates?)

Time of load in: 6P

Time of show start: 7P

Time of show end/ load out: 9P

Expecting full house? Anticipating approximately 100 attendees, based on previous attendance.

Any charge for admission none

Any food, drinks, other items sold: no

Tech requirements: please list what you would need for your program; i.e.: microphones, rigging, special lighting, audio, any projections? Microphones, podium, projector, screen

Talent requirements: any talent, organizers physically disabled? No.

If food trucks:

The vendor show a valid SM Health Department permit to prepare and sell food and if a vehicle is involved , a valid SM County Health Department certification of that vehicle as a place where food can be prepared and served. (N/A for this meeting)

With this information, I will be able to generate a preliminary contract thank you.

Best,

## Helen P. Souranoff

Parking will be difficult, no doubt. Classes start at 6:30p and 7p. Anyone taking classes in the evening would be arriving before your event begins most probably.  
Would you have any technical details for me to generate a preliminary estimate?

Best,

Hello Helen,

Thank you so much for the fast response. I'm waiting on some confirmations, but I feel that 8/21 may be our date. The event would be from approximately 7 to 9 in the evening. Do you think that parking (and first week chaos) would be an issue that late in the evening? (It's been awhile since I was in college, so I'm not sure how these things go these days!)

Thanks again,

Heather

Hello, Heather.

Received your request. All three evenings are available, but please note it will be the first week of classes, so parking/first week madness will be occurring.

Are there any other dates I can interest you in? the week after?

Good afternoon,

I'm writing because my organization is going to schedule a public meeting - the Ascension Heights Environmental Impact Report Scoping meeting. Our initial meeting was held at your facility. Name of organization - County of San Mateo Planning & Building Department Phone number - 650-363-1859 Proposed date of use - either August 20th, 21st, or 22nd Time of use - evening (perhaps 7 - 9 or

similar) Profit or non-profit status - Non-profit (governmental) agency Technical requirements; these don't have to be specific yet, just an overview of the show. - microphones, podium, I will gather more specifics

Please let me know if you can accommodate our dates.

Thank you,

Heather

Subject: RE: FW: Availability Inquiry - August 20th, 21st, 22nd

Hello Helen,  
I apologize for the delay - your message was in my "Spam" folder. I've filled in the missing information  
below.

Info needed for preliminary contract:

Date: August 21st, 2013 (We could potentially use August 20th. Do you have a recommendation about if traffic/parking would be the same or worse/better if we changed dates?)

Time of load in: 6P

Time of show start: 7P

Time of show end/ load out: 9P

Expecting full house? Anticipating approximately 100 attendees, based on previous attendance.

Any charge for admission none

Any food, drinks, other items sold: no

Tech requirements: please list what you would need for your program; i.e.: microphones, rigging, special lighting, audio, any projections? Microphones, podium, projector, screen

Talent requirements: any talent, organizers physically disabled? No.

If food trucks:

The vendor show a valid SM Health Department permit to prepare and sell food and if a vehicle is involved , a valid SM County Health Department certification of that vehicle as a place where food can be prepared and served. (N/A for this meeting)

With this information, I will be able to generate a preliminary contract thank you.

Hello Helen,

Thank you so much for the fast response. I'm waiting on some confirmations, but I feel that 8/21 may be our date. The event would be from approximately 7 to 9 in the evening. Do you think that parking (and first week chaos) would be an issue that late in the evening? (It's been awhile since I was in college, so I'm not sure how these things go these days!)

Thanks again,  
Heather

Good afternoon,

I'm writing because my organization is going to schedule a public meeting - the Ascension Heights Environmental Impact Report Scoping meeting. Our initial meeting was held at your facility.

\* Name of organization - County of San Mateo Planning & Building Department

- \* Phone number - 650-363-1859
- \* Proposed date of use - either August 20th, 21st, or 22nd
- \* Time of use - evening (perhaps 7 - 9 or similar)
- \* Profit or non-profit status - Non-profit (governmental) agency
- \* Technical requirements; these don't have to be specific yet, just an overview of the show. - microphones, podium, I will gather more specifics

Please let me know if you can accommodate our dates.

Thank you,  
Heather

Explanation			
I understand and agree to pay charges that may be incurred due to these special services.			

**SCHEDULING.** Application and permit must be completed 45 days prior to the date of use.

**COMMISSION.** A 10% commission on fees collected by the Permittee will be paid to the institution.

**DEPOSIT.** 50% of estimated fees required with return of contract. Fees are due by \_\_\_\_\_.

**CANCELLATION.** 10% of the deposit, minimum of \$20, is nonrefundable if the event is cancelled by Permittee.

**HOLD HARMLESS, INDEMNITY AND DUTY TO DEFEND.** The Permittee using San Mateo Community College District (the "District") facilities agrees to indemnify, hold harmless, and defend in accordance with Civil Code §2778, the District, its Board of Trustees, officers, agents, employees and representatives from all claims, lawsuits or actions of every name, kind and description, brought for, or on account of injuries to or death of any person, including user or any employee, agent or invitee of user, or damage to property including intangible property and to whomsoever belonging, where such injuries, death or damages occurred in, upon, or due to user's use of the District's premises or property provided that this indemnity obligation shall not apply to injuries for which the District has been found in a competent jurisdiction to be solely liable by reason of its own negligence.

**INSURANCE.** Permittee shall provide a Certificate of Insurance with coverage to respond as primary coverage and the College/District named as additional insured. Unless otherwise amended by written agreement executed by the Executive Vice Chancellor of the District, Permittee shall procure and maintain the following coverages for the duration of this permit: comprehensive General Liability insurance which provides for injuries including accidental death, per any on occurrence in an amount not less than \$2,000,000 per occurrence and \$4,000,000 annual

aggregate; property damage insurance in an amount not less than \$1,000,000 per occurrence; and automobile liability insurance in an amount not less than \$1,000,000 including coverage for owned, non-owned and hired vehicles.

**PROPERTY DAMAGE.** The Permittee is liable for the care and protection of District property and will be charged for any damages sustained to the premises, furniture, or equipment because of the occupancy of District premises by Permittee. Motor vehicles may not be driven on the white concrete areas on the campus grounds

**AVAILABILITY OF FACILITIES.** This agreement shall be considered as a reasonable guarantee from the District to the Permittee that the facility will be available for use as specified. Should facilities be needed on an emergency basis for instruction or instruction-related purposes, the College reserves the right to reassign space or to cancel the contract up to forty-eight hours preceding the scheduled event. (Alternative space will be provided by campus).

**ADDITIONAL CONDITIONS.** In addition to the conditions listed above, this agreement shall be subject to all of the District's rules and regulations, including but not limited to the regulations regarding the Community use and charges for the use of District Facilities as indicated in Exhibit A The use or possession of narcotics, dangerous drugs, alcoholic beverages, or gambling equipment on college property is prohibited (Community Use of District Facilities Section 8.80).

I apologize for the delay - your message was in my "Spam" folder. I've filled in the missing information below.

Info needed for preliminary contract:

Date: August 21st, 2013 (We could potentially use August 20th. Do you have a recommendation about if traffic/parking would be the same or worse/better if we changed dates?)

Time of load in: 6P

Time of show start: 7P

Time of show end/ load out: 9P

Expecting full house? Anticipating approximately 100 attendees, based on previous attendance.

Any charge for admission none

Any food, drinks, other items sold: no

Tech requirements: please list what you would need for your program; i.e.: microphones, rigging, special lighting, audio, any projections? Microphones, podium, projector, screen

Talent requirements: any talent, organizers physically disabled? No.

If food trucks:

The vendor show a valid SM Health Department permit to prepare and sell food and if a vehicle is involved , a valid SM County Health Department certification of that vehicle as a place where food can be prepared and served. (N/A for this meeting)

With this information, I will be able to generate a preliminary contract thank you.

Best,

Subject: Re: FW: Availability Inquiry - August 20th, 21st, 22nd

Hello Helen,

Thank you so much for the fast response. I'm waiting on some confirmations, but I feel that 8/21 may be our date. The event would be from approximately 7 to 9 in the evening. Do you think that parking (and first week chaos) would be an issue that late in the evening? (It's been awhile since I was in college, so I'm not sure how these things go these days!)

Thanks again,  
Heather

Good afternoon,

I'm writing because my organization is going to schedule a public meeting - the Ascension Heights Environmental Impact Report Scoping meeting. Our initial meeting was held at your facility.

- \* Name of organization - County of San Mateo Planning & Building Department
- \* Phone number - 650-363-1859
- \* Proposed date of use - either August 20th, 21st, or 22nd
- \* Time of use - evening (perhaps 7 - 9 or similar)
- \* Profit or non-profit status - Non-profit (governmental) agency
- \* Technical requirements; these don't have to be specific yet, just an overview of the show. -

microphones, podium, I will gather more specifics

Please let me know if you can accommodate our dates.

Thank you,

Heather

Estimated Commission Amount	<u>\$0.00</u>	Total Estimated Fees	<u>\$492.00</u>
Deposit Amount (due at signing)	<u>\$246.00</u>	Permittee is responsible for actual costs	
Deposit Return Date	<u>                    </u>	Amount Returned	
Explanation			
I understand and agree to pay charges that may be incurred due to these special services.			

**SCHEDULING.** Application and permit must be completed 45 days prior to the date of use.

**COMMISSION.** A 10% commission on fees collected by the Permittee will be paid to the institution.

**DEPOSIT.** 50% of estimated fees required with return of contract. Fees are due by \_\_\_\_\_.

**CANCELLATION.** 10% of the deposit, minimum of \$20, is nonrefundable if the event is cancelled by Permittee.

**HOLD HARMLESS, INDEMNITY AND DUTY TO DEFEND.** The Permittee using San Mateo Community College District (the "District") facilities agrees to indemnify, hold harmless, and defend in accordance with Civil Code §2778, the District, its Board of Trustees, officers, agents, employees and representatives from all claims, lawsuits or actions of every name, kind and description, brought for, or on account of injuries to or death of any person, including user or any employee, agent or invitee of user, or damage to property including intangible property and to whomsoever belonging, where such injuries, death or damages occurred in, upon, or due to user's use of the District's premises or property provided that this indemnity obligation shall not apply to injuries for which the District has been found in a competent jurisdiction to be solely liable by reason of its own negligence.

**INSURANCE.** Permittee shall provide a Certificate of Insurance with coverage to respond as primary coverage and the College/District named as additional insured. Unless otherwise amended by written agreement executed by the Executive Vice Chancellor of the District, Permittee shall procure and maintain the following coverages for the duration of this permit: comprehensive General Liability insurance which provides for injuries including accidental death, per any on occurrence in an amount not less than \$2,000,000 per occurrence and \$4,000,000 annual

aggregate; property damage insurance in an amount not less than \$1,000,000 per occurrence; and automobile liability insurance in an amount not less than \$1,000,000 including coverage for owned, non-owned and hired vehicles.

**PROPERTY DAMAGE.** The Permittee is liable for the care and protection of District property and will be charged for any damages sustained to the premises, furniture, or equipment because of the occupancy of District premises by Permittee. Motor vehicles may not be driven on the white concrete areas on the campus grounds

**AVAILABILITY OF FACILITIES.** This agreement shall be considered as a reasonable guarantee from the District to the Permittee that the facility will be available for use as specified. Should facilities be needed on an emergency basis for instruction or instruction-related purposes, the College reserves the right to reassign space or to cancel the contract up to forty-eight hours preceding the scheduled event. (Alternative space will be provided by campus).

**ADDITIONAL CONDITIONS.** In addition to the conditions listed above, this agreement shall be subject to all of the District's rules and regulations, including but not limited to the regulations regarding the Community use and charges for the use of District Facilities as indicated in Exhibit A The use or possession of narcotics, dangerous drugs, alcoholic beverages, or gambling equipment on college property is prohibited (Community Use of District Facilities Section 8.80).

PERMITTEE HEREBY ACCEPTS THIS AGREEMENT AND AGREES TO BE BOUND BY THE TERMS AND CONDITIONS AS OUTLINED ABOVE AND AS STATED IN EXHIBIT A ATTACHED.

**To:** Eliza Tam  
**Date:** 7/30/2013 10:51 AM  
**Subject:** Re: Year End Reports to Controller due 7/31/13

Hi Eliza,

Thanks for your note - and I'm sorry for the delayed response while I was out of office. Last year, Virginia answered NONE for all of these forms. I do not know of any AR from NGO's, and we haven't received or paid any grants. For the Fund Balance Questionnaire, she also entered "NONE" for Restricted Fund Balance, Committed Fund Balance (Unrestricted), or Assigned Fund Balance (Unrestricted). We do have some funds we are carrying forward from FY12-13 to FY13-14, and I'll list it all below. Can you help me determine if any of it should appear on the Fund Balance Questionnaire?

#1 Ascension Heights Project (vendor is AES). \$107,101. This is applicant funds and the contract and ATR were approved at the June 4 BoS meeting. (Appeared in Deferred Revenue Journal)

#2 Edgewood Canyon Project (vendor is TRA). \$53,000. This is also applicant funding that was received to pay for the contract. (Appeared in Deferred Revenue Journal)

The other deferred revenue items were also in existence at Year End 11-12, and Virginia didn't note them on the Questionnaire, so I don't think we need to worry about them. The other funds I can think of are

#3 The Princeton Land Use project (also BoS action on 6/4/13). We received \$250,00 in FY12-13, and didn't use a lot of it in 12-13. The CMO I believe is funding this contract.

#4 We were also given a \$600,000 loan by CMO to fund our Accela Automation Upgrade and some funds carry over for that.

Please let me know if you think that any of this qualifies as Restricted, Committed, or Assigned. Thank you!  
Heather

Thank you,  
Heather

>>> Eliza Tam 7/26/2013 9:57 AM >>>  
Good morning Heather,

Just wanted to check if your department had Accounts Receivable from Non-Governmental Agencies, Grant Receivable or Payable, Fund Balance as of June 30, 2013. Those are due on 7/31/13.

Thank you and have a wonderful weekend.

Eliza

Hi Helen,

I would like to confirm for September 25. I apologize - I still haven't received a response about the mics - but I will update you ASAP. Please let me know what the next step is. Thank you for all of your help and patience as we figure this out.

Heather

Hello again Helen,

I'm still working out about finding out the mic quantity and configuration. I'll update you as soon as I can. In light of the potential first week of school chaos, we are considering changing our dates. Are September 25 and/or 26th available?

Thank you again,  
Heather

Subject: RE: FW: Availability Inquiry - August 20th, 21st, 22nd

Hello Helen,  
I apologize for the delay - your message was in my "Spam" folder. I've filled in the missing information below.

Info needed for preliminary contract:

Date: August 21st, 2013 (We could potentially use August 20th. Do you have a recommendation about if traffic/parking would be the same or worse/better if we changed dates?)

Time of load in: 6P

Time of show start: 7P

Time of show end/ load out: 9P

Expecting full house? Anticipating approximately 100 attendees, based on previous attendance.

Any charge for admission none

Any food, drinks, other items sold: no

Tech requirements: please list what you would need for your program; i.e.: microphones, rigging, special lighting, audio, any projections? Microphones, podium, projector, screen

Talent requirements: any talent, organizers physically disabled? No.

If food trucks:

The vendor show a valid SM Health Department permit to prepare and sell food and if a vehicle is involved , a valid SM County Health Department certification of that vehicle as a place where food can be prepared and served. (N/A for this meeting)

With this information, I will be able to generate a preliminary contract thank you.

Best,

Parking will be difficult, no doubt. Classes start at 6:30p and 7p. Anyone taking classes in the evening would be arriving before your event begins most probably.

Would you have any technical details for me to generate a preliminary estimate?

Best,

Helen P. Souranoff

Hello Helen,

Thank you so much for the fast response. I'm waiting on some confirmations, but I feel that 8/21 may be our date. The event would be from approximately 7 to 9 in the evening. Do you think that parking (and first week chaos) would be an issue that late in the evening? (It's been awhile since I was in college, so I'm not sure how these things go these days!)

Thanks again,  
Heather

Good afternoon,

I'm writing because my organization is going to schedule a public meeting - the Ascension Heights Environmental Impact Report Scoping meeting. Our initial meeting was held at your facility.

- \* Name of organization - County of San Mateo Planning & Building Department
- \* Phone number - 650-363-1859
- \* Proposed date of use - either August 20th, 21st, or 22nd
- \* Time of use - evening (perhaps 7 - 9 or similar)
- \* Profit or non-profit status - Non-profit (governmental) agency
- \* Technical requirements; these don't have to be specific yet, just an overview of the show. -

microphones, podium, I will gather more specifics

Please let me know if you can accommodate our dates.

Thank you,

Hi Jan,

I'm helping James Castaneda to organize a public meeting for September 25 for the AES/Ascension Heights project. They need 50% of the contract amount pretty soon. Do you think the best thing for me to do is pay it an expense it? Please let me know what you think.

Thanks,  
Heather

Explanation			
I understand and agree to pay charges that may be incurred due to these special services.			

**SCHEDULING.** Application and permit must be completed 45 days prior to the date of use.

**COMMISSION.** A 10% commission on fees collected by the Permittee will be paid to the institution.

**DEPOSIT.** 50% of estimated fees required with return of contract. Fees are due by \_\_\_\_\_.

**CANCELLATION.** 10% of the deposit, minimum of \$20, is nonrefundable if the event is cancelled by Permittee.

**HOLD HARMLESS, INDEMNITY AND DUTY TO DEFEND.** The Permittee using San Mateo Community College District (the "District") facilities agrees to indemnify, hold harmless, and defend in accordance with Civil Code §2778, the District, its Board of Trustees, officers, agents, employees and representatives from all claims, lawsuits or actions of every name, kind and description, brought for, or on account of injuries to or death of any person, including user or any employee, agent or invitee of user, or damage to property including intangible property and to whomsoever belonging, where such injuries, death or damages occurred in, upon, or due to user's use of the District's premises or property provided that this indemnity obligation shall not apply to injuries for which the District has been found in a competent jurisdiction to be solely liable by reason of its own negligence.

**INSURANCE.** Permittee shall provide a Certificate of Insurance with coverage to respond as primary coverage and the College/District named as additional insured. Unless otherwise amended by written agreement executed by the Executive Vice Chancellor of the District, Permittee shall procure and maintain the following coverages for the duration of this permit: comprehensive General Liability insurance which provides for injuries including accidental death, per any on occurrence in an amount not less than \$2,000,000 per occurrence and \$4,000,000 annual

aggregate; property damage insurance in an amount not less than \$1,000,000 per occurrence; and automobile liability insurance in an amount not less than \$1,000,000 including coverage for owned, non-owned and hired vehicles.

**PROPERTY DAMAGE.** The Permittee is liable for the care and protection of District property and will be charged for any damages sustained to the premises, furniture, or equipment because of the occupancy of District premises by Permittee. Motor vehicles may not be driven on the white concrete areas on the campus grounds

**AVAILABILITY OF FACILITIES.** This agreement shall be considered as a reasonable guarantee from the District to the Permittee that the facility will be available for use as specified. Should facilities be needed on an emergency basis for instruction or instruction-related purposes, the College reserves the right to reassign space or to cancel the contract up to forty-eight hours preceding the scheduled event. (Alternative space will be provided by campus).

**ADDITIONAL CONDITIONS.** In addition to the conditions listed above, this agreement shall be subject to all of the District's rules and regulations, including but not limited to the regulations regarding the Community use and charges for the use of District Facilities as indicated in Exhibit A The use or possession of narcotics, dangerous drugs, alcoholic beverages, or gambling equipment on college property is prohibited (Community Use of District Facilities Section 8.80).

**Subject:** Re: Year End Reports to Controller due 7/31/13

Good morning Heather,

Sorry, I was super busy yesterday and I didn't read your email in details. For items (1) and (2), they were reported as Deferred Income, so they are good. Items (3) and (4), can you provide more info? e.g. board resolution, loan #, org & acct, expenditures on both and then we can figure out the balance.

We need to report Fund Balance today.

Thanks,  
Eliza

>>> Heather Hardy 7/30/2013 10:51 AM >>>  
Hi Eliza,

Thanks for your note - and I'm sorry for the delayed response while I was out of office. Last year, Virginia answered NONE for all of these forms. I do not know of any AR from NGO's, and we haven't received or paid any grants. For the Fund Balance Questionnaire, she also entered "NONE" for Restricted Fund Balance, Committed Fund Balance (Unrestricted), or Assigned Fund Balance (Unrestricted). We do have some funds we are carrying forward from FY12-13 to FY13-14, and I'll list it all below. Can you help me determine if any of it should appear on the Fund Balance Questionnaire?

#1 Ascension Heights Project (vendor is AES). \$107,101. This is applicant funds and the contract and ATR were approved at the June 4 BoS meeting. (Appeared in Deferred Revenue Journal)

#2 Edgewood Canyon Project (vendor is TRA). \$53,000. This is also applicant funding that was received to pay for the contract. (Appeared in Deferred Revenue Journal)

The other deferred revenue items were also in existence at Year End 11-12, and Virginia didn't note them on the Questionnaire, so I don't think we need to worry about them. The other funds I can think of are #3 The Princeton Land Use project (also BoS action on 6/4/13). We received \$250,00 in FY12-13, and didn't use a lot of it in 12-13. The CMO I believe is funding this contract.

#4 We were also given a \$600,000 loan by CMO to fund our Accela Automation Upgrade and some funds carry over for that.

Please let me know if you think that any of this qualifies as Restricted, Committed, or Assigned. Thank you!  
Heather

Thank you,  
Heather

>>> Eliza Tam 7/26/2013 9:57 AM >>>  
Good morning Heather,

Just wanted to check if your department had Accounts Receivable from Non-Governmental Agencies, Grant Receivable or Payable, Fund Balance as of June 30, 2013. Those are due on 7/31/13.

Thank you and have a wonderful weekend.

**Attachments:** 3800B\_SeptemberRevisions\_20130826.xls

Hi Shanna,

I apologize I didn't send this sooner; my department is plagued with a cold (half my Admin staff are out today!) and I had to stay home on Friday. Please see the attached. The document is open to Tab 5 - LRP. Please let me know if you recommend a different entry for the Highway 1 project.

Thank you,  
Heather

>>> Shanna Collins 8/22/2013 3:57 PM >>>

Heather,

That is perfect. You can send me the September revision worksheet and I can review it.

Shanna

>>> Heather Hardy 8/22/2013 3:28 PM >>>

Hello Shanna and Garrett,

Is this answer sufficient for our purposes? As we are funding the Transportation Authority's project (and no reference is made to staff hours), I intend to budget this \$150,000 expense in Long Range Planning's Other Professional Contract Services sub account 38320-5858. Please let me know if you feel I should do something different.

Thanks,  
Heather

Heather Hardy | Executive Secretary, Planning and Building Department | County of San Mateo

5:30>>> Steve Monowitz 8/22/2013 2:26 PM >>>

Hi Heather,

The funds will be used to satisfy the "local match" requirements of the Measure A transportation funds we obtained from the Transportation Authority (TA) to implement the Highway One pedestrian crossings, medians, and turn lanes suggested by the Midcoast Safety and Mobility Studies. Specifically, in accordance with the Scope of Work developed in coordination with the TA, the local match will be used to help fund the TA's completion of a Preliminary Planning Study (PPS) and Project Implementation Document (PID).

I've copied Nicholas on this message to make sure that this is an accurate summary and see if he has anything to add.

Thanks to you both. Let me know if additional information is needed.

Steve

>>> Heather Hardy 8/21/2013 4:52 PM >>>

Hi Steve,

I'm meeting with Shanna in CMO tomorrow at 3PM to discuss how we account for the Highway 1 project on our September Revision template. She has notified me where the revenue is coming from - but how

do we intend to spend it? Please let me know the monetary breakdown for how you intend to spend it. (Is it salaries? A contract?) Can you let me know by 2:30 so that I can pop it into the template and mail it to CMO before the meeting?

Thanks again,

Heather

FY 12-13 Year-End Variance Analysis (+/- 10% of Budget)

Budget Unit Name (ID)

EXPLANATION OF VARIANCES:

**REVENUE (Explain by Revenue Class):**

Taxes	N/A
Licenses, Permits, Franchises	No variance.
Fines, Forfeitures, Penalties	This variance is due to the resolution of more than 50% of Stop Work Notice cases as a result of a Program initiative to revisit previous cases. In addition, improvements in the economic climate have resulted in fewer instances of unpermitted building activities.
Use of Money and Property	N/A
Intergovernmental Revenue	Federal grant funding for the Energy Efficiency Climate Action Plan was lower than anticipated.
Charges for Services	Improvements in the economic climate and an increase in construction projects and building activity has resulted in an increase in plan checking revenues.
Interfund Revenue	Revenues relating to the Airport Community Roundtable were lower than anticipated during a transitional year for the program.
Miscellaneous Revenue	A total of \$286,033.98 (132% of budget) was received in this revenue class due to the addition of the midyear Ascension Heights project. However, due to delays in some substantial projects, \$172,131.99 was debited as "Deferred Revenue". Those funds will be appropriated in Fiscal Year 2013-14.
Other Financing Sources	N/A

**EXPENDITURES (Explain by Expenditure Object):**

Salaries and Benefits	No variance.
Services and Supplies	This variance is due to lower than forecast expenditures on several major projects which will resume at higher levels in Fiscal Year 2013-14. Significant examples include Plan Princeton, Ascension Heights Subdivision, and the Accela technology upgrade.
Other Charges	No variance.
Fixed Assets	N/A
Other Financing Uses	N/A
Intrafund Transfers	No variance.

<b>North Fair Oaks General Plan Implementation</b>	0	\$3,403,500	\$0	\$0	\$3,403,500	\$0
The Board of Supervisors adopted the North Fair Oaks Community Plan in 2011, establishing goals and policies to improve land use, transportation, health and wellness, and other conditions in the North Fair Oaks Community. The adopted Plan is now in the implementation stage. The Department will implement the Plan through the following measures: Redesign and make safety improvements to Middlefield Road. Construction of NFO entry signage at four intersections. Installation of anti-dumping signs.

FY 12-13 Year-End Variance Analysis (+/- 10% of Budget)

Budget Unit Name (ID)

EXPLANATION OF VARIANCES:

**REVENUE (Explain by Revenue Class):**

Taxes	N/A
Licenses, Permits, Franchises	No variance.
Fines, Forfeitures, Penalties	This variance is due to the resolution of more than 50% of Stop Work Notice cases as a result of a Program initiative to revisit previous cases. In addition, improvements in the economic climate have resulted in fewer instances of unpermitted building activities.
Use of Money and Property	N/A
Intergovernmental Revenue	Federal grant funding for the Energy Efficiency Climate Action Plan was lower than anticipated.
Charges for Services	Improvements in the economic climate and an increase in construction projects and building activity has resulted in an increase in plan checking revenues.
Interfund Revenue	Revenues relating to the Airport Community Roundtable were lower than anticipated during a transitional year for the program.
Miscellaneous Revenue	A total of \$286,033.98 (132% of budget) was received in this revenue class due to the addition of the midyear Ascension Heights project. However, due to delays in some substantial projects, \$172,131.99 was debited as "Deferred Revenue". Those funds will be appropriated in Fiscal Year 2013-14.
Other Financing Sources	N/A

**EXPENDITURES (Explain by Expenditure Object):**

Salaries and Benefits	No variance.
Services and Supplies	This variance is due to lower than forecast expenditures on several major projects which will resume at higher levels in Fiscal Year 2013-14. Significant examples include Plan Princeton, Ascension Heights Subdivision, and the Accela technology upgrade.
Other Charges	No variance.
Fixed Assets	N/A
Other Financing Uses	N/A
Intrafund Transfers	No variance.

Good afternoon Marshall,  
Again, thank you for take a moment to chat with me yesterday regarding the Ascension Heights project. I just wanted to give you a heads up it doesn't look like Ill be getting you anything this week, so I'm planning on sending you the letter notification on Tuesday. Hopefully we can get that out Wednesday. Ill touch base with you Tuesday morning on that matter. Have a great Labor Day weekend.

Regards,  
JAMES

**Attachments:** 20130903\_PLN2002-517 Announce Draft v2.docx

Good morning Steve,

When you have an opportunity, please review the attached announcement for the Ascension Heights project. We're getting ready for the EIR scoping session at the end of September, and gearing up for active community feedback. My goal with this letter was to serve as a general announcement that this project is becoming active, but also start off on the right foot by emphasizing community inclusivity. As you know, in the past has generated a great deal of community involvement, and I have no doubt we'll receive the same on this go around. I'd like to make sure we're being proactive and timely with dates as possible, and be selective with our wording as to avoid the ridged notifications that is sometimes perceived not as welcoming.

If you don't many edits/concerns, work through Heather to get this over to Word Processing so they can get it into the system and I can finalize on Tuesday. Otherwise, we can discuss this further Tuesday morning. Ill be out of the office today and tomorrow. Thanks Steve, have a great Labor Day weekend.

August 30, 2013

Dear Baywood & San Mateo Highlands Residence,

The San Mateo County Planning & Building Department in the coming months will begin processing an application for a proposed subdivision for the development 19 lots on Water Tank Hill, at the corner of Ascension Drive and Bel Aire Road. A previous plan for 25 lots, with a fire access road, was considered and denied by the Planning Commission in December 2009. The project applicant has submitted a revised plan, which will require full review by County agencies, a new Environmental Impact Report, comments and feedback from the community, and final consideration by the Planning Commission.

With the processing of a major subdivision application, there are two inherent parts. The first is review of the proposed subdivision to ensure compliance with County subdivision and zoning regulations. The second is environmental review in the form of an Environmental Impact Report (EIR), which is developed to inform decision-makers of any significant environmental effects. These two parts are considered together by the Planning Commission. Community input and participation is both important and essential in these two parts.

In the coming six to nine months during which the project will be reviewed and the environmental document drafted, your assistance is needed in providing valuable community feedback on the project. As the review process progresses, there will be three opportunities to participate in the process: 1) the public scoping process, 2) review of the draft environmental impact report, and 3) the project as a whole.

As we prepare to begin the environmental review work, we like to invite you to this first opportunity to get an overview of the project, and share what you think are the most pressing environmental concerns that should be addressed in the EIR. This scoping open house session will be held on:

Wednesday, September 25, 2013 - 7:00pm  
College of San Mateo Theater - Doors open at 6:15pm

At this event, you'll be able to meet and ask questions from the Planning staff, project applicant, and the County's Environmental Consultants, as well as provide important feedback on the environmental resources you feel may be the most impacted by the subdivision project that will help us steer the environmental review.

We're also providing an opportunity to share feedback on this part of the process online at:

[www.smcspeakout.com/ascension-scoping](http://www.smcspeakout.com/ascension-scoping)

For the most up to date information and to sign up to receive email updates, visit the project's website at:

<http://goo.gl/XUDqLC>

If you have any questions, please don't hesitate to contact us. Be expecting addition updates and notifications of important dates, meetings, and opportunities to share your essential input about your community.

Regards,

James A. Castañeda, AICP

Good afternoon Trent,

Hope your Labor Day weekend went well. With our meeting quickly approaching (and me out of the office for a week starting next Tuesday), I wanted to start going over the setup of the scoping meeting, and start figuring out what equipment we'll need (either to have you, us, or the theater to provide). I've attached a photo from the last time we were there in December 2009 for the Planning Commission hearing. For that, we had the commission at one end, and had a projector setup off stage for them to see, and we utilized the theater's projector and big screen for the audience. Staff was on the other end of the stage. We three microphones on the commissions table, and two on the staff table. We had a mic also for the audience at the bottom of the center aisle.

That said, what are your thoughts in our setup with tables and mics on the stage, as well as what we have available for the attendees? I'm assuming we'll use their projector again, as well as tables and mics provide, but we need to start getting the layout and equipment in order so they can adequately prepare such. Heather, Jim's admin assistant, will be helping out coordinating this effort.

Per your meeting plan (attached for Heather's benefit), I think it looks good. Ill expect to look at the Powerpoint (which I'm guess will be the only item we'll be presenting on the big screen?) no later Wednesday, September 18th.

Let me know what else we need, and if there is anything additional I should task the applicant with. Again, I just want to start getting everything planned and set in motion before next Tuesday and makes the week leading up to the meeting easy. Thanks Trent.

JAMES

# Ascension Heights Subdivision Project

## Scoping Meeting Plan

### Location:

Theatre at College of San Mateo  
1700 W. Hillsdale Blvd  
San Mateo, CA 94402  
650-574-6161

### Format:

Information session followed by power point presentation / invite project-related questions and comments on the content of the Draft EIR and alternatives.

### Set-Up:

1) Information session:

In the lobby, we need three tables, one for the County, one for the Applicant's Team, and one for AES. These should be in close proximity so we can all communicate as needed. County will have an aerial of the site as an exhibit, Applicant's team will have the site plan on an aerial, and AES's team will have an exhibit explaining the CEQA process. These tables will be stationed throughout the evening, with a focus of most staff being available prior to the initiation of the presentation.

2) Presentation:

Table and chairs with microphones for at least one representative from the County, the Applicant's Team, and AES up on the stage to either the right or left of the presentation screen at an angle facing the audience. Presentation will be given with Powerpoint. Need a podium with microphone set up in front and facing the stage to take public comments, preferably aligned with center aisle so participants can walk up, give their comment, and then return to their seats. AES will give the presentation (if preferred) and then open up the session for comments. Those that wish to speak will fill out comments cards that will be made available as soon as the doors open. After the presentation, AES will announce each speaker in the order the comments are received. The commenter will have 2 minutes to provide a comment; AES has a timer for such a purpose.

### Staffing:

1) County

- a. Personnel to attend information table in lobby
- b. One staff member to attend main table on stage

2) Applicant

- a. Personnel to attend information table in lobby
- b. One staff member to attend main table on stage

3) AES

- a. One staff to attend table
- b. One staff to attend main table on stage

- c. Two staff members to roam and collect speaker card/comment cards, present speaker cards to the front table on the stage during the comment session, general assistance for attendees.

**Poster Boards (to be provided by AES):**

- Site Plan
- Site Aerial
- CEQA Process

**Public Information Materials:**

- NOA

**Supply Checklist:**

- Powerpoint Presentation (AES, to be submitted to County at least two weeks prior to Scoping Meeting)
- Sign In Sheet (AES)
- Speaker Card (AES)
- Comment Forms (AES)
- Comment Box (AES)
- Pens (AES)
- Exhibits (AES)
- Easels (AES)
- Tape (AES)
- Meeting Signs (AES)

**County Tasks:**

- Arrange for audio recorder (court reporter works well) and staff member to prepare meeting minutes
- Plan attendance by County and Applicant's team

Hi Annie,

Thanks again for creating the labels for our Ascension Heights letter! James Castaneda has asked if there's a spreadsheet that was created. Do you have one that you can email me?

Thanks,  
Heather

That set-up would be perfect for the scoping meeting, very similar. Typically, we only have one table up on the stage since we only need myself and representatives from the County on stage. We will be answering questions in the lobby about the project description and scope of the environmental review, but we don't respond to the comments given for the record. I will have the powerpoint to you before the 18th and that will be the only presentation on the screen. I recommend we publish the NOP mid-next week so the scoping hearing lands in the middle of the comment period, this is the best timing way to allow adequate time for review before and after the scoping hearing to facilitate public involvement. I will look over the plan again and see if there are any other recommendations I can think of to provide for a smooth set-up.

Subject: Ascension Heights, Scoping Mtg Logistics/Equipment

Good afternoon Trent,

Hope your Labor Day weekend went well. With our meeting quickly approaching (and me out of the office for a week starting next Tuesday), I wanted to start going over the setup of the scoping meeting, and start figuring out what equipment we'll need (either to have you, us, or the theater to provide). I've attached a photo from the last time we were there in December 2009 for the Planning Commission hearing. For that, we had the commission at one end, and had a projector setup off stage for them to see, and we utilized the theater's projector and big screen for the audience. Staff was on the other end of the stage. We three microphones on the commissions table, and two on the staff table. We had a mic also for the audience at the bottom of the center aisle.

That said, what are your thoughts in our setup with tables and mics on the stage, as well as what we have available for the attendees? I'm assuming we'll use their projector again, as well as tables and mics provide, but we need to start getting the layout and equipment in order so they can adequately prepare such. Heather, Jim's admin assistant, will be helping out coordinating this effort.

Per your meeting plan (attached for Heather's benefit), I think it looks good. Ill expect to look at the Powerpoint (which I'm guess will be the only item we'll be presenting on the big screen?) no later Wednesday, September 18th.

Let me know what else we need, and if there is anything additional I should task the applicant with. Again, I just want to start getting everything planned and set in motion before next Tuesday and makes the week leading up to the meeting easy. Thanks Trent.

JAMES

Thanks Trent, a couple of follow up questions:

Regarding the NOP, what are the notification requirements for the community? While it's getting sent out far later than I anticipated for various issues this week, the letter I shared with you last week will hopefully go out tomorrow. Again, it was to act as a "softer" notification of the scoping meeting to those within 600-ft of the project site, and other interested parties I had from our last mailing list. Per CEQA, should it be expected these same people receive the NOP as well?

That said, Ill need the final NOP draft (which I think I sent back a few edits already, but let me know if you don't have those), any distribution mailings we're obligated to do by Monday, September 9th. I'd like to have that all prepped for staff to do later in the week in my absents.

Thanks for your help Trent.

JAMES

I will give you a rundown of NOP procedures, required mailings, and the Final Draft NOP tomorrow via an email if that is OK? I have the NOP edits and was planning on having everything finalized by tomorrow anyway.

Again, it was to act as a "softer" notification of the scoping meeting to those within 600-ft of the project site, and other interested parties I had from our last mailing list. Per CEQA, should it be expected these same people receive the NOP as well?

That said, I'll need the final NOP draft (which I think I sent back a few edits already, but let me know if you don't have those), any distribution mailings we're obligated to do by Monday, September 9th. I'd like to have that all prepped for staff to do later in the week in my absents.

Thanks for your help Trent.

**CC:** Heather Hardy  
**Date:** 9/5/2013 9:09 AM  
**Subject:** Press Release, Ascension Heights  
**Attachments:** 20130905 Notice to Press Release.docx

Good morning Marshall,

Attached is a copy of the notification we're planning to send out this afternoon to residence within 600-feet of the Ascension Heights project. Hopefully this will be enough to generate a press release, but please let me know if you need any additional information. Also, please advise when it could go out. Unfortunately, we were a little delayed getting the website ready, which held up getting the notice out earlier. Please advise when the earliest (yet most appropriate) time this could be sent out. Thanks for your help. I greatly appreciate it.

smcplanning.org | sforoundtable.org

September 5, 2013

Dear Baywood and San Mateo Highlands Residents, and Interested Parties:

In the coming months, the San Mateo County Planning and Building Department will begin processing an application for a proposed subdivision for the development of 19 lots on Water Tank Hill, at the corner of Ascension Drive and Bel Aire Road. A previous plan for 25 lots, with a fire access road, was considered and denied by the Planning Commission in December 2009. The project applicant has submitted a revised plan, which will require full review by County agencies, a new Environmental Impact Report, comments and feedback from the community, and final consideration by the Planning Commission.

With the processing of a major subdivision application, there are two inherent parts. The first is review of the proposed subdivision to ensure compliance with County subdivision and zoning regulations. The second is environmental review in the form of an Environmental Impact Report (EIR), which is developed to inform decision makers of any significant environmental effects and measures to mitigate them. These two parts are considered together by the Planning Commission. Community input and participation are both important and essential in these two parts.

In the coming six to nine months during which the project will be reviewed and the environmental document drafted, your assistance is needed in providing valuable community feedback on the project. As the review process progresses, there will be three opportunities to participate in the process: (1) the public scoping process, (2) review of the Draft Environmental Impact Report, and (3) the project as a whole.

As we prepare to begin the environmental review work, we would like to invite you to this first opportunity to get an overview of the project, and share what you think are the most pressing environmental concerns that should be addressed in the EIR. This scoping open house session will be held on:

Wednesday, September 25, 2013  
7:00 p.m.  
College of San Mateo Theater  
1700 W. Hillsdale Boulevard, San Mateo, California  
Doors Open at 6:15 p.m.

Baywood and San Mateo Highlands Residents, and Interested Parties  
September 5, 2013  
Page 2

At this event, you will be able to meet and ask questions of the Planning staff, project applicant, and the County's Environmental Consultants, as well as provide important feedback on the environmental resources you feel may be the most impacted by the subdivision project. These comments will help steer the environmental review.

We are also providing an opportunity to share feedback on this part of the process online at:

<http://www.smcspeakout.com/water-tank-hill-proposed-subdivision-environmental-concerns>

For the most up to date information and to sign up to receive email updates, visit the project's website at:

<http://goo.gl/XUDqLC>

If you have any questions, please do not hesitate to contact us. Also, expect additional updates and notifications of important dates, meetings, and opportunities to share your essential input about your community.

Regards,

James A. Castañeda, AICP

NOP:

Surprisingly, the NOP requirements from the CEQA guidelines state that "the lead agency shall send to the Office of Planning and Research (OPR) and each responsible and trustee agency a notice of preparation stating that an environmental impact report will be prepared". The public is not mentioned, but lead agencies typically include a notice such as you will be releasing. But it is better to keep the public notice separate from the NOP.

Responsible agencies are defined as those public agencies having discretionary approval power over the project.

Trustee agencies have jurisdiction by law over natural resources that would be affected by the project. Basically any agency/entity the County and Applicant would have to work with/consult during design and construction of the PP.

Typical NOP lists include the following agencies:  
 Regional Water Board  
 CDFW  
 USFWS  
 AQMD  
 Water District/WW District/Other Special District  
 School District  
 Utility Service Companies (Power, communications)  
 Adjacent City planning departments

Since OPR is down the street, we can hand deliver the NOP to start the 30-day comment period. Let me know if you want further help defining the NOP list.

## **NOTICE OF EIR PREPARATION NOTICE OF EIR SCOPING MEETING**

---

**To:** Responsible Agencies, Trustee Agencies, and Other Interested Parties  
**Subject:** **Notice of Preparation of a Draft Environmental Impact Report**  
**From:** County of San Mateo  
**Street Address:** 455 County Center, 2nd Floor  
**City/State/Zip:** Redwood City, California 94063  
**Contact:** James Castañeda, AICP

---

The County of San Mateo (County) is the Lead Agency and will prepare an Environmental Impact Report (EIR) for the proposed Ascension Heights Subdivision Project identified below in compliance with the California Environmental Quality Act (CEQA). The purpose of this Notice of Preparation (NOP) is to describe the Ascension Heights Subdivision Project and potential environmental effects in order to allow agencies and interested parties to provide input on the scope and content of the EIR.

Due to the time limits mandated by state law, your response to this notice must be sent at the earliest possible date but **not later than October 30 days** after receipt of this notice.

Please send your response to:

The County of San Mateo  
Attention: James Castañeda, AICP  
Planning and Building Department  
455 County Center, 2nd Floor  
Redwood City, California 94063.

Please provide a contact name for your agency, if applicable, with your comments.

**Project Title:** Ascension Heights Subdivision Project

**Project Applicant:** County of San Mateo

**Project Location:** The project site is located in the Baywood Park area of unincorporated San Mateo County at the northeast corner of Bel Aire Road and Ascension Drive, east of Interstate 280 and west of State Route 92. The College of San Mateo is located approximately 0.25 miles to the northeast of the project site. The City of Redwood City is approximately 7 miles southeast of the project site, and the City of San Francisco is approximately 20 miles to the north.

**Proposed Project:** The Ascension Heights Subdivision Project (Proposed Project) entails a request by the project proponent for the County of San Mateo to approve subdivision of six parcels on 21.13 acres into 21 lots for development of 19 single-family residences with the remaining 2 lots (approximately 7.81-acres) maintained as a conservation area. Potable water would be provided by connection to the Mid-

Peninsula Water District, and wastewater collection would be provided by the Crystal Springs Sanitation District with treatment at the City of San Mateo Wastewater Treatment Plant. Development of the 19 subdivided lot into single-family residences would require 40,920 cubic yards of grading, of which 28,270 cubic yards would require exportation from the site. Accordingly, the project applicant also requires a grading permit from the County.

**Project Background:** The Proposed Project is a re-design of a previous project, which proposed a subdivision of the project site into 27 parcels, of which 25 would have been developed. A Draft Environmental Impact Report (Draft EIR) and Final Environmental Impact Report (Final EIR) were prepared for the previously proposed project. In 2009, the San Mateo County Planning Commission (Planning Commission) denied the applications for a Major Subdivision and Grading Permit and declined to certify the Final EIR. Based on an appeal and subsequent submission by the applicant of an alternative concept design plan to address the Planning Commission's concerns raised on the project, the County Board of Supervisors remanded the project back to the Planning Commission.

The applicant and County engaged the community in a discussion of the project and the revised project for reconsideration. County planning staff hosted a series of dialogs between the applicant and members of the community to discuss the topics of concern raised during the environmental review process of the previous project. The project as currently proposed was redesigned as a reduced intensity project limiting residential development to the northwestern portion of the project site, thereby reducing the subdivision request and associated number of proposed residential units.

**Environmental Effects:**

The County has determined that an EIR is the appropriate environmental document for the project and that the EIR should address, at a minimum, the following issues:

Aesthetics – The EIR will address the potential impacts to the visual character of the project site and surrounding public view areas. Potential impacts to ambient lighting conditions will also be addressed.

Air Quality – The EIR will address the project's potential fugitive dust impacts, odor impacts, and regional air pollutant impacts, including green house gas emissions. Potential impacts to sensitive receptors will also be addressed. The analysis will address both short-term impacts from construction and long-term impacts from operation. A preliminary health risk assessment for diesel particulate matter will be developed in support of the EIR.

Biological Resources – The EIR will analyze the project's short-term (construction) and long-term (operation) impacts on threatened and endangered species, migratory birds, habitats, and other biological resources in light of applicable state and federal regulatory frameworks.

Geology and Soils – The EIR will assess the proposed project's potential for soil erosion during construction and the level of geologic and seismic risks. The level of risk to people and property will be determined based on analysis of the project site's soil properties and seismic hazard potential.

Greenhouse Gas Emissions – The EIR will assess the proposed project's potential for impacts to greenhouse gas emissions in relation to applicable and adopted plans, policies, and regulations.

Hazards – The EIR will evaluate potential impacts from the use of chemicals and practices common to construction of residential areas as well as address the increase in use of residential hazardous substances.

Hydrology and Water Quality – The EIR will analyze the project's impacts to surface and groundwater on a local and regional level. Potential impacts to

surface water quality and changes in local hydrological conditions will be addressed.

Land Use, Planning, and Agriculture – The EIR will evaluate the consistency of the proposed project with the adopted plans and policies of County, including but not limited to the respective General Plans and Zoning Ordinances. The EIR will also analyze the proposed project’s compatibility with surrounding land uses.

Noise/Vibration – The EIR will evaluate the potential impacts on ambient noise levels from construction-related and operation-related noise. Primary issues include short-term increase in noise and vibration that may impact sensitive receptors and the creation of land use conflicts regarding noise.

Public Services and Utility Systems – The EIR will evaluate the potential impact on public services and utility systems in the surrounding region. The EIR will determine if additional or expanded facilities or utilities are required to meet the needs of the residential units.

Traffic and Circulation – The EIR will address the potential impacts to surrounding roadways resulting from the increase in motor vehicle traffic along roadways during construction (short-term, temporary increase) and operations.

Growth-Inducing and Cumulative Effects – The EIR will analyze potential growth-inducing and cumulative impacts resulting from the proposed project pursuant to CEQA Guidelines 15126(d) and 15130, respectively.

**Discussion of Alternatives:**

CEQA Guideline 15126.6(a) requires that an EIR describe a range of reasonable alternatives for the project. The EIR will evaluate the comparative merits of the alternatives, including the No-Project alternative. The alternatives will be determined, in part, by public input received during the NOP comment period. To ensure that the Environmental Impact Report adequately addresses the full range of issues and alternatives related to the proposed project and that all significant issues are identified, comments and suggestions are invited from all interested parties.

**Notice of Scoping Meeting:**

Pursuant to CEQA Guidelines section 15082 (Notice of Preparation and Determination of Scope of EIR), the County of San Mateo will conduct a scoping meeting for the purpose of soliciting views of adjacent cities, responsible agencies, agencies with jurisdiction by law, trustee agencies, and interested parties requesting notice, as to the appropriate scope and content of the EIR.

The scoping session will be conducted by the County of San Mateo on September 25, 2013 at 7:00 P.M. (doors will open at 6:15 P.M.) at:

The Theatre at College of San Mateo  
1700 W. Hillsdale Blvd  
San Mateo, CA 94402  
650-574-6161

Please contact James Castañeda, Planner, for further information.

Ill see what I do regarding everything you listed for today's meeting, but I really do need an opportunity to discuss this with Jim (who is back from vacation today) before meeting today to be advised on the matter. JAMES

>>> On 9/8/2013 at 21:45, Dave Pine <dpine@smcgov.org> wrote:

James,

I do think Jerry Ozanne has a point about the community needing time to get organized in advance of the Scoping Session. Providing adequate time is particularly critical if there will only be one scoping session. We discussed the number scoping sessions briefly when we talked on the phone on Friday, and you said holding only one session was typical, though you indicated you would check on whether we have conducted more than one on other projects. Note that the AES contract states that "*AES will attend and provide environmental expertise at one public town hall/scoping meeting during the 30-day public review period starting with release of the NOP.*"

When we meet, let's discuss whether it is still possible to push the scoping session out a few weeks. I assume it is unless the formal NOP has been circulated. If for some reason we can't push out the scoping session, we may indeed need a second scoping session. It is fair for the neighborhood, and good for us, if concerned citizens have the time to provide their best input in the early stages of the review process.

Dave

>>> Dave Pine 9/8/2013 9:31 PM >>>

Jerry,

Let's plan on talking by phone as soon as you are back in town on Wednesday. Please call my cell: 650-

I do not believe that any actions have been taken by AES or the Planning Department that will limit the public scoping session. However, I see your point about needing adequate time for the community to prepare for the scoping session. I will discuss this issue when I meet with James Castanada on Monday.

I hope you are enjoying your vacation.

Dave

Dave,  
I'm on vacation until next Wed with limited email access.

When we discussed the next steps at our meeting in June, you and I agreed neighborhood representatives should meet with Planning prior to the Scoping meeting to review our experiences (as you outline below) and provide our input into the preliminary stages spelled out in the EIR consultant contract. Some of these preliminary stages may be used to limit the scope of the study prior to, and independent of, the public scoping meeting.

I am concerned that the neighborhood has not been consulted on the timing of the scoping meeting to allow sufficient time for community preparation. Following our meeting with the Planning Dept, we will hold a neighborhood meeting to prepare for the formal scoping session. Two weeks is insufficient time to accomplish this work. Consequently, it is impossible to have the necessary and informed community input for the Ascension Hts scoping meeting by September 25.

I look forward to discussing a new date for the scoping meeting when I return on the 11th.

Thank you for your help and efforts on this,  
Jerry

Jerry,

Thank you for your email.

The next step in the Ascension project will be to conduct the public EIR scoping process. I have just learned that a meeting has been set for that purpose on September 25th at 7:00 pm at the College of San Mateo Theater. Attached is a letter from SMC Planner James Castaneda about the meeting. The letter was mailed yesterday to all residences within 600-feet of the project site, as well other interested parties that the SMC Planning Department is aware of. In addition, a press release will be issued about the meeting early next week.

No work has been performed on the project by the SMC Planning Department since we last discussed this matter on June 8th (when I toured the project site) with the exception of putting in place a contract with Analytical Environmental Services (AES) to conduct the EIR. The first step of the EIR process is to hold the scoping session scheduled for September 25th.

I am scheduled to meet with James on Monday to review the entire planning and review process going forward. We are both committed to transparency, robust citizen involvement, and applying the "lessons learned" from any shortcomings in the review process conducted for the first Ascension proposal.

I will give you a call over the weekend to discuss this matter further. Among other issues, I would like to discuss what steps need to be taken to ensure that residents who live MORE than 600-feet away from the project site are also notified of the scoping session and kept up to date on the project's status.

Regards,

Dave

Hi Dave,

We are concerned the Ascension Hts project may be proceeding through Planning Dept processes without community input. Can you bring us up to date on the status of the project?

Thank you,

Jerry

Trent,

Fresh out of the meeting with Supervisor Pine, looks like their will be a postponement of the scoping meeting for at least two weeks. Heather Hardy will confirm and coordinate later this week, but other than pushing the overall timeline out, is there any other ramifications on your end or possible conflicts if we look at dates mid week the second week in October? Let me know.

Good morning Marshall,

Attached is a copy of the notification we're planning to send out this afternoon to residence within 600-feet of the Ascension Heights project. Hopefully this will be enough to generate a press release, but please let me know if you need any additional information. Also, please advise when it could go out. Unfortunately, we were a little delayed getting the website ready, which held up getting the notice out earlier. Please advise when the earliest (yet most appropriate) time this could be sent out. Thanks for your help. I greatly appreciate it.

**From:** James Castaneda  
**To:** ALBINI, Bryan; Hardy, Heather  
**Date:** 9/19/2013 7:33 AM  
**Subject:** Update to Ascension Heights page

Bryan,

As soon as you get an opportunity, can you please update the "LATEST UPDATE" section of the Ascension Heights webpage with the following to replace the first paragraph:

The Environmental scoping and project overview open house scheduled for September 25, 2013 has postponed. The new date be posted, and new notifications will be sent as soon as that date becomes available. We apologize for any inconvenience.

You can leave the rest of the stuff below the first paragraph alone, which are the "To start sharing..." link.

Heather will work with you today in doing another update as we anticipate figuring out the new date. If you have any questions, work with her as I won't be in the office today (but reachable via email), and on 9/80 tomorrow.

Heather: if anything comes up, feel free to email or call my cell if something time critical (

JAMES

**Subject:** Ascension Heights Meeting

Hello all,

I heard a little while ago that Jim & Supervisor Pine have determined that the date for the Ascension Heights Scoping meeting is definitely 10/9/13. As a result, we will be stuffing & labeling 300ish letters to go out to the 900ft radius of the six affected parcels tomorrow. Janna, please final the letter with the 10/9/13 date. Frances will be on vacation, and it's Irma's 9/80 day. Please pitch in as much as you're able.

Thanks,  
Heather

**Subject:** Re: Press Release, Ascension Heights

Hi Marshall,

Sorry for the delay in my response. As Heather had mentioned, I was out of the office earlier this week, and just got back in yesterday. After a few meetings with Supervisor Pine, Jim and one of the key community members, we now have a rescheduled date for the event, which will be Wednesday, October 9, 2013 at 7:00pm (doors open at 6:15pm). I was wondering if it would be possible to have your press release draft to reflect the change of date (as we already had sent out a mailer reflecting September 25th), but also keep with the context of the original notice to explain the purpose of the meeting. We're planning to send out a notice to residence tomorrow morning nothing the changed date (Heather can provide you with a copy if you need one). Let me know if you need anything else. Thanks for your help Marshall.

JAMES

>>> Marshall Wilson 09/16/13 1:44 PM >>>  
Hi James,

Just checking in re the draft news release I sent you last week.

Marshall

>>> James Castaneda 9/5/2013 9:09 AM >>>

Good morning Marshall,

Attached is a copy of the notification we're planning to send out this afternoon to residence within 600-feet of the Ascension Heights project. Hopefully this will be enough to generate a press release, but please let me know if you need any additional information. Also, please advise when it could go out. Unfortunately, we were a little delayed getting the website ready, which held up getting the notice out earlier. Please advise when the earliest (yet most appropriate) time this could be sent out. Thanks for your help. I greatly appreciate it.

JAMES

Heather,  
If you or someone can run those letters through the folding machine, I can label them all. It won't take that long.

Lisa

**Subject:** Re: Question: Dennis T.  
**Attachments:** AscensionHeights\_900Ft.xlsx

Hi James,

The mailing went out today as planned, and I've attached the list of 900 ft owners. We mailed today to that list and also to your agency contacts list that you sent me on Wednesday. I hope you enjoy the weekend.

Heather

>>> James Castaneda 9/20/2013 9:36 AM >>>

He knows he needs to be present at the event. But to be clear the idea of "asking questions for staff and the applicant" as noted in the letter was more at the lobby before the event, not necessarily during the scoping session itself as a Q&A. AES idea was having some tables set up in the lobby of the theater where we'd all be available to talk to informally before the event. Ill run through this with Dennis via email next week, and the expectations of him and his staff, but in my opinion he needs to be ready to answer any questions the consultant may not be able to respond to. Again, I can email Dennis the information in detail on Monday, but if this is something Jim isn't comfortable regarding the notice, then feel free to change the notice to be more generic as I'm not going to be able to have a conversation with Dennis or his staff today.

JAMES

>>> Heather Hardy 09/20/13 9:15 AM >>>

Hi James,

Sorry to bother you during your 9/80. We're still on track to send out the Change of Date notice today to the expanded 900ft radius people. Jim has a question though - the letter states that the public can ask questions of the applicant. Does Dennis know that is the case? Is he prepared to answer public questions?

Thank you,  
Heather

**Attachments:** 10\_ProgramSummary\_38430\_20131015.doc

Hello Lisa,

I've attached your Current Planning Program Summary that we turned in to CMO back in June. We need to send Garrett our updated actuals (the yellow highlighted fields). Can you complete this by noon tomorrow (Wednesday)? Right now, the "target" numbers are populated. Sorry about the quick turnaround.

Thanks,  
Heather

## Current Planning (3843P)

San Mateo County

Livable Community

Planning and Building Department

Current Planning

### Program Outcome Statement

Enhance quality of life and the environment through enforcement of land use, development, and environmental regulations.

### Program Results

Current Planning protects and improves the community and the environment by processing permits for land use and development projects in the unincorporated areas of San Mateo County, ensuring compliance with the County General Plan, Local Coastal Program, Zoning/Subdivision Regulations and State and County environmental statutes. At the Development Review Center, staff receive and review plans and permit applications in addition to providing the public with information about zoning, land use, and environmental regulations and best management practices to improve the quality of future development, protecting neighborhood character and property values. Current Planning also provides project coordination, research and analysis, reports and recommendations for compliance with land use regulations to 11 Boards, Commissions and Committees, including the Board of Supervisors, that provide a forum for resolving land use conflicts and make land use recommendations and decisions.

Initiatives to be undertaken to improve performance in the next two years include: (1) expanding capacity and developing procedures for electronic information distribution and document management to increase efficiency and improve public outreach; (2) revising appeal procedures to decrease permit delays; (3) offering enhanced services/products to the public relative to property records research/analysis; (4) providing more detailed review of commercial development to improve land use compatibility; (5) installing and transitioning to a new permit tracking system to increase efficiency and accountability; (6) revising staff procedures to increase accuracy of information provided; (7) cross-training/sharing resources with Long Range Planning to update zoning regulations and policies.

### Performance Measures

	FY 2011-12 Actual	FY 2012-13 Actual	FY 2012-13 Estimate	FY 2013-14 Target	FY 2014-15 Target
% of Customers Assisted within 20 minutes/Phone Calls Answered or Returned Same Day <sup>1</sup>	83%	N/A	84%	85%	90%
% of Hearing-level Permits Processed within 4 months. Staff-level Permits Processed within 2 months <sup>2</sup>	68%	75%	70%	75%	80%
Average Number of Days from Application to Decision of Design Review Applications <sup>3</sup>	54	50	22	21	20

<sup>1</sup> FY2011-12 and FY2012-13 data for customers assisted only.

<sup>2</sup> From date application complete for hearing-level permits, from date of application submittal for staff-level permits. FY 2011-12 and FY2012-13 data for hearing-level permits only.

<sup>3</sup> Marin County/SMCounty; includes only DR permits exempt from environmental review.

**Resource Allocation Table**

	Actual 2010-11	Actual 2011-12	Revised 2012-13	Recomm. 2013-14	Change 2012-13	Recomm. 2014-15	Change 2014-15
Salary Resolution							
Funded FTE							
Total Requirements		AUTO	Filled	From	BRASS		
Total Sources							
Net County Cost							

**FY 2013-14 Program Funding Adjustments**

The following are significant changes from the FY 2012-13 Revised to the FY 2013-14 Recommended Budget:

1. **Adjustments to Provide Current Level Services:**

Budget adjustments have been made to reflect current costs for existing levels of service and performance: inclusion of merit increases, and increases in retirement contributions and health benefit costs. The variances below are explained by a change in budget methodology. Prior to the FY 2013-14 budget cycle, costs were tracked across programs using intra-departmental transfers. The decrease in Total Sources is due to anticipated decline in Zoning Permit and Land Division Permit revenues. This decrease is partially offset by anticipated gains in Plan Checking Fees and Interfund Revenue. Increases in Total Requirements are the result of several one-time appropriations including the Princeton Land Use Update and the Ascension Heights Subdivision.

Total Requirements	Total Sources	Net County Cost	Positions
\$832,540	(\$230,473)	\$1,063,013	0

**FY 2014-15 Program Funding Adjustments**

The following are significant changes from the FY 2013-14 Recommended Budget to the FY 2014-15 Recommended Budget:

1. **Adjustments to Provide Current Level Services:**

Budget adjustments have been made to reflect current costs for existing levels of service and performance: inclusion of merit increases, and increases in retirement contributions and health benefit costs. The variance in Total Requirements is due to the deletion of one-time appropriations including the Princeton Land Use Update, Ascension Heights Subdivision, and the Edgewood Canyon Estates Mitigation Monitoring Program.

Total Requirements	Total Sources	Net County Cost	Positions
(\$182,527)	\$20,775	(\$203,302)	0

**Date:** 10/22/2013 1:09 PM  
**Subject:** Question: Dec 3

Hi James,

Jim had relayed to me the dates for the next two Ascension Heights meetings. I noticed that you declined one - is December 3 a bad day for you? I believe you're a mandatory member of these meetings, so I can work with District 1 and the Ozannes to identify a new date if necessary.

Please let me know. Thanks,

Heather

**From:** James Castaneda  
**To:** Heather Hardy  
**Date:** 10/22/2013 1:29 PM  
**Subject:** Re: Question: Dec 3

Heather,

I just responded to the request I denied indicating that I recall the meeting was for 2pm after I indicated to the group it would be difficult for me to stay past 3:45pm that Friday. As I'm sure Jim has indicated, these meetings can run long, and 90 minutes tends to be more reasonable time to allocate. If the meeting for November 8th is scheduled for 2:30pm, that might be do-able.

For December 3rd, I can be available through 4:30pm.

JAMES

Hi James,

This is how the meetings are scheduled at present:

Friday November 8, 2:00 - 3:30 PM  
Tuesday December 3, 3:00 - 4:30 PM

That seems okay within the parameters you list below, but please let me know if I'm mistaken.

Thanks,  
Heather

## 1 PROCEEDINGS

2 MR. EGGEMEYER: I'm the director for the  
3 Planning and Building Department with San Mateo  
4 County. Once again, I'd like to thank you for  
5 spending and taking time out of your schedules to be  
6 with us tonight, and before we get started, a few  
7 introductions that I'd like to share with you. First,  
8 directly to my left is James Castaneda. He is the  
9 project planner for this project, and then to his left  
10 is the County's consultant, Trent Wilson, with AES.  
11 He will be making the majority of the presentation  
12 this evening, but before I pass the mic off to him,  
13 there's a few other people I'd like to acknowledge  
14 here that have joined us. And directly down in this  
15 first row off to my left is our County Counsel, Tim  
16 Fox, and then also, county supervisor Dave Pine is up  
17 right there standing up. I want to let you know that  
18 he's here tonight, and that this legislative aid is  
19 right behind him.

20 So I want to make sure that you are aware of  
21 some speaker cards, the blue cards, as well as comment  
22 cards. They are the yellow cards and they will be  
23 very helpful if you could fill those out in one  
24 fashion or another -- your preference -- and so we'll  
25 be calling on some speakers a little bit later on, and

1 I really want to stress how the objective tonight is  
 2 really to hear what you have to share with us as we  
 3 initiate this environmental impact report process, and  
 4 Trent will be going into a little bit more details,  
 5 but I want to let you know that's our main objective  
 6 is really to hear from you after we go through this  
 7 presentation. So with that, I'm going to pass it off  
 8 to Trent.

9 MR. WILSON: All right. Thank you very  
 10 much. We all appreciate you coming. We'd like to go  
 11 move forward with the presentation is give an  
 12 introduction to the proposed project. Many of you are  
 13 familiar with the previously proposed project and know  
 14 this is a revision of that older project. So we want  
 15 to summarize what the changes are as well as  
 16 explaining the EIR process; why we are here, what the  
 17 future steps are and how there's more opportunity for  
 18 involvement throughout this EIR process. We want to  
 19 kind of explain the anticipated scope of what we plan  
 20 on assessing, and mixing that in conjunction with the  
 21 comments we receive from the public and other agencies  
 22 as well. Then we want to move this open to the kind  
 23 of the testimony portion, which is actually taking  
 24 your comments on the project itself, potential project  
 25 alternatives, and what impact should be assessed in

1 the environmental impact report.

2           Some commonly used terms, really quickly,  
3 CEQA, California Environmental Quality Act, which is  
4 the regulation we are complying with in conducting the  
5 EIR. EIR is environmental impact report. When we say  
6 "project", we mean the Ascension Heights subdivision  
7 project. One that's not up there, which is why we are  
8 here, is called scoping, and that's what we are  
9 conducting tonight, which is the process of involving  
10 the public and receiving input on what should be  
11 included within the CEQA environmental review process  
12 as well as collecting comments on the proposed project  
13 itself.

14           Project overview -- and forgive me, it is  
15 not too often I give a presentation without seeing the  
16 slides. As shown, we show where the project is  
17 located, just southwest of the college itself.

18           So the project size is located southwest of  
19 where we are now, with regional access from the 280  
20 and the 92. Closer view, which many of you have seen  
21 these, as they are already upstairs on the desk, but  
22 we definitely want to point out that the parcel for  
23 the California Water Service Company is not included  
24 in the project site. So that will remain untouched  
25 and is not included in the development. Adjacent to

1 the site to the northeast, we have the Baywood Park  
 2 neighborhood.

3           The Enchanted Hills is to the southeast  
 4 and southwest and the Starlight Heights neighborhood  
 5 is to the northwest. Here we see the development  
 6 footprint, which we also have upstairs that many of  
 7 you have been discussing with the civil engineer. The  
 8 applicant is now proposing to subdivide the six  
 9 parcels totalling 3.25 acres into the 21 lots, 19 of  
 10 which are planned to be developed. The other two  
 11 would remain as open space and will not be developed.  
 12 Access, obviously will be provided from Bel Air Road,  
 13 and then the development features itself, I want to  
 14 point out, approximately 5.44 acres of the site is  
 15 what plans to be developed, and those include the 19  
 16 homes, the associated infrastructure, including  
 17 circulation and then the dedication of 7.81 acres of  
 18 the project site. Potable water will be provided by  
 19 the Mid-Peninsula Water District and Waste Water will  
 20 be provided by Crystal Springs and city of San Mateo  
 21 Plant.

22           As we discussed, this is a revision of  
 23 a previously proposed project, so we want to kind of  
 24 provide a comparison of the project details that the  
 25 previous project was denied in December, 2009 and

1 currently we are in the beginning of the environmental  
2 review phase. The project site remains the same. The  
3 single familiar residences have been reduced from 25  
4 to 19 lots, and the area of disturbance have been  
5 reduced from 8.49 to 5.44. The open space has been  
6 increased by about three acres, and with the current  
7 proposed project, there's no development planned for  
8 that southwest portion of the project site.

9                   Now, within the environmental impact  
10 report, the environmental impact report itself is an  
11 informational documents. The purpose of the document  
12 is to inform the lead agency, which is the County of  
13 San Mateo, on the potentially significant impacts of  
14 this proposed subdivision and development. The other  
15 purpose is to also inform the public as well, as well  
16 as other agencies that may have some involvement with  
17 the project, either state, county or local agencies.  
18 The real main purpose is to identify the direct  
19 impacts. Direct impacts are defined as, for example,  
20 physically removing a sensitive habitat. The indirect  
21 impacts, indirect are defined as impacts removed more  
22 in time and space. So for example, the use of a  
23 certain public service would require that facility to  
24 be expanded that would cause indirect physical impact.  
25 Then cumulative impacts, which are impacts that are

1 defined as while the proposed project itself, that  
2 specific impact might not be potentially significant.  
3 In combination with all other projects and even some  
4 past projects, there has a potential to be a  
5 significant impact in the culmination with all these  
6 impacts.

7 I think one of the most important  
8 aspects of CEQA is that we must present feasible  
9 mitigation measures to lessen the significant impacts,  
10 and the lead agency is responsible that those  
11 mitigation measures become implemented. The overall  
12 process will be -- right now we are in the notice of  
13 the preparation, and the scoping process, so we are  
14 taking input into what should be assessed as far as  
15 these indirect, direct and cumulative impacts as well  
16 as potential alternatives. After this 30 day comment  
17 period, which ends November 4th, we then pick up speed  
18 and develop the EIR, incorporating comments, received  
19 by the public and other agencies and we are looking at  
20 finishing the draft EIR in winter, 2013-2014. Once the  
21 draft EIR is completed, we release it to a public  
22 comment period, 45 day comment period, which there  
23 will be another opportunity to comment on the  
24 environmental impact report itself. As we will  
25 discuss later in the slides, there are other

1 opportunities for the public to be involved. Right  
 2 now this is discussing the environmental review  
 3 process, and we plan on having a final EIR in spring,  
 4 2014.

5                   The final EIR includes and incorporates  
 6 comments received on the draft, response to those  
 7 comments, and review any change to be made on comments  
 8 received. One of the important issues we want to  
 9 discuss as well is scoping also helps the lead agent  
 10 project proponent and ourselves when writing the  
 11 document kind of scope out potential alternatives.  
 12 According to CEQA, we must review feasible  
 13 alternatives, including a no-action alternative, and  
 14 that will be assessed in the document as well, and as  
 15 we addressed in the NOP, that will be based on the  
 16 comments received from the public and other agencies  
 17 if we receive such comments.

18                   The scope of the EIR is laid out in the  
 19 CEQA guidelines and it depicts what environmental  
 20 resource areas should be assessed. One thing to note  
 21 is CEQA is very specific in that it addresses physical  
 22 impacts; for example, under public services, it's not  
 23 just will it impact, for example, residents, there may  
 24 be more call for law enforcement activities, but would  
 25 that increase in services force a need for new

1 physical facilities that the construction of would  
2 physically impact the environment. So that's one of  
3 the specifics of CEQA, that it's about physical  
4 impacts to the environment.

5           The proposed scope that we are looking  
6 at includes all of the required environmental  
7 resources that are required to look through, and that  
8 includes aesthetics associated with the elevations and  
9 doing some figures within the document itself to show  
10 those aesthetic impacts. Air quality, we will be  
11 looking at the impacts of not only construction  
12 operation, but we will also be conducting a health  
13 risk assessment to determine impacts from diesel  
14 particulate matter from construction and the increase  
15 in traffic from the project itself. Some of the  
16 issues as many of you have been discussing upstairs  
17 with the site plan, you see the delineated area in the  
18 southwest corner, that will be addressed in the  
19 biological resources section of the document, and then  
20 you can see, we will go through the other resource  
21 areas. But what helps us in this scoping is to make  
22 sure we see what specific issues with some of these  
23 environmental resources the public may have to  
24 address.

25           So the review of future public

1 involvement opportunities as discussed earlier, there  
 2 is a 45 day review period of the draft EIR when it's  
 3 complete and released to the public, and there will be  
 4 another public forum similar to this one where we  
 5 actually take public comments on the document; its  
 6 content, the alternatives that were included and how  
 7 they were analyzed. And once again, please note that  
 8 those forms are specifically to the environmental  
 9 review process and do not relate necessarily to the  
 10 Planning Commission's approval. It's just to the  
 11 environmental document itself.

12                   Within the final EIR, we give the  
 13 public notice and then with the Planning Commission  
 14 hearing, those are the opportunities to speak on some  
 15 of the other issues outside of the environmental  
 16 review process.

17                   So as we stated, we have the yellow  
 18 cards. If you prefer to provide a written comment or  
 19 to mail a comment in, the address is on those yellow  
 20 cards that are up front. If you want to grab one on  
 21 the way out, please include your name, return address  
 22 and subject line to make sure they get to the right  
 23 person about scoping comments, Ascension Heights  
 24 subdivision project.

25                   So now what we will do to move forward

1 with collecting the public testimony, we have the  
 2 comment cards we received from the beginning. If  
 3 there are any more, feel free just to hand them to  
 4 Stephanie. Many of you met out front. Or you can  
 5 walk them up if you are closer or have someone bring  
 6 them to me. When we call your name, please walk up to  
 7 the nearest microphone and state your name clearly so  
 8 we can get it for the public record because these do  
 9 go into what's called the administrative record for  
 10 the project for the environmental impact report. And  
 11 if you could, to allow appropriate time in general, we  
 12 have a presentation by the Homeowner's Association  
 13 first, but after that, we typically like to limit it  
 14 to a three to four minute comment as appropriate. So  
 15 I think now, we will begin with the public testimony.  
 16 If we can get the Homeowner's Association and their  
 17 presentation, we can get under way.

18 HOMEOWNER'S ASSOCIATION: Good evening.  
 19 Can you hear me all right?

20 We would like to start off, and I will not  
 21 take very long on this part of it, but I thought we  
 22 have a little bit of review of where we've been,  
 23 because the project history actually goes back before  
 24 2001, but we've had original scoping back then. We  
 25 then had a draft EIR and '09 as was discussed and was

1 rejected by the Planning Commission on a four to zero  
2 vote. We as a neighborhood and community felt it had  
3 substantial inadequacies in the EIR, draft EIR.  
4 Nearly every aspect of it was, the analyses were  
5 limited and only impacts that were significant. They  
6 had unacceptable positions in it, and I'll just read  
7 one comment here, one section of it. It states, "At  
8 this time, the standard Bay Area Air Quality  
9 Management District control measures have not been  
10 incorporated into the project nor has the project  
11 applicant acknowledged that these measures would be  
12 implemented."

13           What these measures are is very simple. This  
14 is -- most of these are designed to keep the dust down  
15 and reduce the amount of air pollution. The standard  
16 way of doing that is washing down the trucks before  
17 they leave the project, and if you remember, a  
18 tremendous number of truck loads were going back and  
19 forth through the neighborhood. So simple matter of  
20 covering the trucks themselves. There are about less  
21 10 or 12 different standard ways in which it is  
22 accepted procedure to do this.

23           This is the draft EIR. There's no resolution  
24 at this point as to whether they will or will not, but  
25 the applicant had not acknowledged it was going to do

1 that, and this is now going to the Planning Commission  
2 to make a decision. I consider that -- we consider  
3 that inadequate. We don't know what's going to happen  
4 and what's not going to happen. How could anyone make  
5 a reasonable decision based on that kind of  
6 information?

7           We then went through the draft EIR and  
8 filled in many, many comments as were outlined, and  
9 this one, of course, is the same way. The responses  
10 were basically inadequate. It was -- if it were  
11 serious, it would have been laughable. There are many  
12 of the sections where we would point to a paragraph  
13 that was not clear, ask detailed questions about the  
14 paragraph. The response back from the consultant at  
15 the time was to basically restate your answer is --  
16 restate verbatim the paragraph that we were asking  
17 questions about. So it was absolutely unacceptable in  
18 terms of that response, and I trust we won't have the  
19 same level of response this time. But if you think  
20 about what the process is, how much do we know now  
21 about where the project is actually going? We know  
22 it's fewer lots. We don't know how much less dirt is  
23 going to be displaced. We don't know the truck loads  
24 that are going to have to be required. We don't know  
25 very much, and you are being asked to make comments

1 about it that may go into the public record and from  
 2 that, we are going to get some answers back, not on  
 3 the scoping part, but that's to first lay out the  
 4 scope of what the issues are. But the draft EIR is  
 5 the same process, and I find that very inadequate for  
 6 us. I think we need a lot more information and we are  
 7 going to do our best to be able to get that out.

8 I want to talk a little bit about the health  
 9 impacts. I am a physician and anesthesiologist at  
 10 UCSF and I have worked with many of these issues  
 11 relating to pulmonary cardiac problems because that is  
 12 my job; to keep them stable and steady. This  
 13 particular issue in terms of the air quality has some  
 14 interesting facts about it. We will get into those in  
 15 just a minute, and I will do a very brief summary of  
 16 the rest of it and then other people can come up here  
 17 and talk about it.

18 We just hope that our expectations in 2013  
 19 are that they are going to be different in terms of  
 20 how they were in 2009 in terms of the information and  
 21 quality of it and the detail and quality.

22 So just briefly, the air pollution issues  
 23 are significant. People at risk who are sensitive  
 24 receptors, which I don't quite like that name, young  
 25 children, elderly, compromised immune system,

1 asthmatics, people with COPD and cardiac vascular  
2 illness. Long term, pretty much everyone probably  
3 assumes that that's the issue, that you end up with  
4 cancer or pulmonary diseases from air pollution. But  
5 in the last half dozen years ago, there's been a lot  
6 of work done on what the immediate causes are, and if  
7 you remember even the last Spare the Air day that we  
8 had, we were all cautioned to close our windows, stay  
9 in doors and not go out and exercise. And the issue  
10 there is, there are immediate impacts. And the  
11 studies they have done, the cause and effect is often  
12 questionable, but if you plot elevations in air  
13 pollution and then look at the number of emergency  
14 room visits, heart attacks, strokes and deaths, they  
15 go in parallel. And there are some good scientific  
16 reasons to probably point to the causes as to why that  
17 is, but it's quite clear that in fact, that is an  
18 event. I mean, it is an expected outcome of air  
19 pollution. So it's not trivial and it is an issue.  
20 It is an issue that is something that needs to be  
21 considered, and I'm glad to hear that we are going to  
22 do health risks as part of this assessment.

23           The Bay Area Air Quality Management District  
24 adopted -- they made a decision after looking at the  
25 data that it wasn't -- the construction related

1 pollution issues were significant. There was a legal  
2 case that put that, it's now under appeal, but it put  
3 that process in hold, so it isn't mandated in the  
4 state of California. But it doesn't prevent the lead  
5 agency from using the information and using some of  
6 that knowledge that has been gained about that, so I  
7 expect that we will hear a lot more about air  
8 pollution.

9           This is just one example of what happens  
10 after a single hour of operation of an off road  
11 diesel. These very small particles are actually the  
12 most dangerous ones, because they go the deepest into  
13 the lung, absorbed into the blood stream and what  
14 causes the inflammation process then increases the  
15 propensity for clotting to form, and that's where the  
16 heart attacks and strokes are presumed to come from,  
17 new clots being formed as a result of breathing. So  
18 that's something that happens within hours of  
19 exposure, and you see that this level is quite high,  
20 actually, at 20 micrograms per liters per cube, but at  
21 600 feet spread out that far at a high level, and in  
22 the closer to the diesel, in the center there, it's  
23 even higher. If you look at the project here and you  
24 take one device, just one off road device, you start  
25 getting in one hour that 600 feet spreads out to that

1 distance, and in two hours, now covered most of the  
2 project, and three, four hours, it's all of it plus  
3 some neighbors, and six hours it's out to there. It's  
4 not trivial. If you look at the project, the area in  
5 the purple is an area that you can't see very well,  
6 but it is downstream deep in it. It's lower than the  
7 project. This is most of the area around that. And  
8 in six hours, with a little bit of wind, possibly, you  
9 have quite a bit of spread of this from one diesel at  
10 a level that could be significant. If there's a lot  
11 of wind, it's going to be blown over to the East Bay,  
12 which is not particularly good either, but it doesn't  
13 directly affect us nearly as much.

14           So this is a very significant consideration  
15 because if we have no wind and where we have a  
16 situation where the diesel exhaust is going to flow  
17 downhill, we will be smelling it across the entire  
18 neighborhood for as long as that aspect of the project  
19 goes on.

20           Some of the other -- I'm going to go through  
21 these very briefly and just summarize them, not even  
22 point much to them, but the other people are going to  
23 come up and talk about it. There are issues about  
24 civility and the soil protected slopes seem to exceed  
25 what the City of San Mateo's limits are. Air quality

1 just discussed, and issues about monitoring and how  
2 you make that significant and unavoidable. What does  
3 that mean? You know, there are newer diesel engines  
4 that are better fuels. They all cost more, but they  
5 have substantial reduction, sometimes a factor of one  
6 tenth of what is the exhaust is normally in the  
7 typical diesel. Lots of truck traffic. Where is it  
8 going to go? How frequent is it? Last analysis did  
9 not include CSM traffic, which we all know is  
10 substantial. So the traffic analysis was not done  
11 during the school hours. There was no discussion  
12 about retention or replanting of landscaping. There  
13 may be some, but the fair amount proposed, we haven't  
14 seen those details this time, but I have yet to see a  
15 replanting in our neighborhood anywhere around here  
16 that lasted more than one or two seasons at most, even  
17 though they try and water it. So does that mean that  
18 we are just guaranteed that whatever planting is there  
19 is going to be gone for some time?

20           There's a question about privacy on Parrott  
21 properties because of the design of it. You can see  
22 the slope. It's actually very, very steep as we all  
23 know, because we drive by this one way or another all  
24 the time. But this is one drawing of the houses of  
25 one plan by the developer that places the house at

1 basically 45 degrees and just slightly 20 feet away  
 2 from the property line. So these are houses on  
 3 Parrott, and these are the new houses, and you can  
 4 see, actually, the fill makes the house even higher.  
 5 This is the current outline of the present slope and  
 6 this is what the fill is. So it's actually raising  
 7 the house higher than the current level by a fair  
 8 amount.

9 Other issues -- this was never covered in  
 10 the previous draft EIR assessment, but there are  
 11 underground streams, if you talk to people along  
 12 Parrott and also San Mateo Oaks, they have sump pumps  
 13 and they have a fair amount of water that comes in  
 14 under their houses and have issues with that.  
 15 Disturbing those underground streams is again an  
 16 unknown and they may end up having some problems as a  
 17 result of that.

18 The storm and water run off is at issue. 10  
 19 year storm ranges were what was used in calculations  
 20 where we all know that we are sort of getting 50 or  
 21 hundred year storms here, not necessarily right here  
 22 at this time, but certainly parts of the country. So  
 23 we don't think a 10 year storm limit is what should be  
 24 looked at.

25 Construction noise was another interesting

1 component in the last EIR, draft EIR. Noise from one  
2 piece of equipment was considered significant and  
3 determined to be unavoidable. That was one. There  
4 was no assessment how many would be operating  
5 simultaneously. So when you add them up where they  
6 were relative to the houses, what does it mean and how  
7 was the assessment done was very inadequate, and when  
8 we pushed back and asked about that, that was the one  
9 where we got the copy of what the description was  
10 about it and no explanation about how to do it. Hours  
11 of operation. Are there ways those could be  
12 minimized? Are there mufflers at work to be effective  
13 on that piece of equipment? I don't know.

14 We will get into the erosion and talk about  
15 that, but that's -- we heard there was going to be,  
16 quote, "no development" in the conservation area,  
17 which has gotten larger which might sound good, but  
18 there are problems with the conservation area and we  
19 will talk about those and deal with that more in  
20 detail, but leaving it untouched is not something that  
21 is pleasant for us to contemplate. Also it's been  
22 stated it could be five to 10 years to build this out.  
23 So there's five to 10 years of the denuded hill that  
24 may have something blown on it or a little bit of  
25 grass that may come back and grow, but then it's going

1 to die out? Is it going to be there? How is it going  
2 to be maintained for five, 10 years and then  
3 homeowners aren't going to be part of the conservation  
4 area which is a substantial portion close to, maybe  
5 more than half as I looked at the last numbers, over  
6 the entire property. So how is the rest of that going  
7 to be maintained?

8                   We are going to be very interested in  
9 hearing about that. This is one of the areas that is  
10 going to remain, according to the 2009, and I didn't  
11 hear anything differently tonight, as a conservation  
12 area is the undisturbed protected and unrepaired. I  
13 find this hard to look at. This is a 2009 picture. I  
14 didn't bother to go out and get the 2013, but there's  
15 substantial erosion from this picture. It's much  
16 worse than this now.

17                   So what's the plan here? Why are we  
18 talking about an area that we don't want to touch, but  
19 we want to take advantage of the rest of it. So I  
20 think that's all I have, and I'm happy to turn it back  
21 to let anyone else comment on it on what the issues  
22 are. Thank you.

23                   MR. WILSON: Thank you. We'll continue on,  
24 and I apologize if I mispronounce any names.  
25 Marie O'Rourke.

1           MARIE O'ROURKE: Most of the stuff that was  
2 just covered is part of what I was going to say as  
3 well. I'm interested in the time line as well,  
4 because I'm on CSM Drive and I'm right below where you  
5 are going to be. The springs come up behind my house  
6 as it is, and they just travel wherever they choose.  
7 So if you are disturbing earth above the courts up  
8 there and on Parrott, we are going to have some very  
9 interesting swimming lessons in my garage. So when  
10 you are talking about a five to ten year time line to  
11 move the earth and then you leave it fallow with  
12 nothing holding it, that's a very significant impact  
13 on our houses and I would imagine on Parrott's as  
14 well. I'm also concerned about the slides, because  
15 the earth moves. We have earthquakes up there. We  
16 are on a fault line. I think the San Andreas runs  
17 right underneath that property. The wild life, I  
18 enjoy the owls and the coyote and all the things that  
19 invade my yard. Traffic impact is a dangerous place  
20 up there. People run the stop signs all the time, and  
21 if you have very large trucks carrying lots of earth  
22 on a very narrow street, I don't see how that's going  
23 to be very healthy for the students who go to school  
24 up there, for those of us who live up there, for our  
25 grandchildren who walk up there, for the people who

1 use the area and watch their neighbors' homes and  
2 things.

3           So the traffic alone is of significance to  
4 us, and then the pollution that those trucks and  
5 movers provide for us. My husband is one of your  
6 COPD people, so when you look at the scope of how that  
7 pollution transfers out, remember, we have wind, so  
8 that wind comes and it goes over to the CSM and the  
9 people who go to school here are also going to be the  
10 beneficiaries of all that pollution.

11           The exits coming out of that hill are  
12 marginal. So when you are coming out of that area,  
13 long term, 10 years from now, when all of those houses  
14 are built, you are going to have families who have  
15 members who are driving who are also impacting the  
16 streets long after all of the traffic and all of the  
17 mess is gone. I'm concerned about the fact that you  
18 are going to leave this land empty after you've raided  
19 it. It's not like a development like San Mateo Oaks  
20 or San Mateo Woods where the developer built the  
21 houses, they were inhabited, they had landscaping,  
22 they were living there. It was a short time event.  
23 The place were put together. You didn't have a lot  
24 here, a builder here, a builder there. It was done  
25 and it was over. But a 10 year span, I hope to live

1 pretty long but that's 10 years out of my life. I  
2 would like to see that all of the things that were  
3 addressed by the gentleman before me are put in  
4 writing so that we have an actual criteria to measure  
5 what you are going to do and when you are going to do  
6 it and how you are going to do it and how we can  
7 measure it so that we can decide whether the pollution  
8 on a particular day is too high and who's going to do  
9 the measuring, and that's going to cost a bit of  
10 money, and who's going to pay for that? I can't read  
11 all my notes, but I think I've exceeded my time.  
12 Thank you very much.

13 MR. WILSON: Thank you. Ron Johnson.

14 RON JOHNSON: My name is Ron Johnson.

15 I live on the corner of Parrott and Laurie Lane where  
16 all of this activity will be coming around that  
17 intersection. I've made a few notes to comment on,  
18 and some of them have been covered, but I'll state a  
19 few things I noted.

20 Homes in this area have experienced large  
21 and small landslides and soil erosion for over the 50  
22 plus years we have lived here. This has caused many  
23 of us much extra expense over the years to install and  
24 maintain drainage pipes and retaining walls to prevent  
25 foundation problems and landslides. The developers

1 and builders have generally been out of business or  
 2 gone from our area by the time the numerous problems  
 3 have developed from unstable ground, and it has been  
 4 left to homeowners, insurance companies, and/or  
 5 attorneys to resolve the many major and minor problems  
 6 between properties. The developer should be required  
 7 to pay for a 30 year bond for the future erosion  
 8 problems for the new buyers and the street repairs  
 9 that will be needed as a result of this large project.  
 10 The County has had much excessive expense in recurring  
 11 earth slides and holes and cracks in the roads in our  
 12 area. Too much grading and hauling away of dirt and  
 13 hauling in of building supplies have caused extreme  
 14 dust and exhaust fumes, traffic, noise and congestion  
 15 and street damage. Our quality of life will be  
 16 greatly diminished for the duration of this project  
 17 and I hope it isn't 10 years.

18 MR. WILSON: Thank you. Laurel Nagle.

19 LAUREL NAGLE: Hi. I am Laurel Nagle and  
 20 I guess I'm involved with the Homeowner's Association,  
 21 so first I'm going to address issues of the project  
 22 and then we have a couple specific to our home. We  
 23 live on Parrott. The first is that the images that  
 24 we've seen in the past renderings have shown an  
 25 easement between Parrott and the homes. Sometimes

1 it's there. Sometimes it's not. But there's always  
2 these mature trees there, and we really want some  
3 information about how big is the easement? If there  
4 is one, who is managing it? What kind of trees? How  
5 fast will they grow? As you saw from pictures, and we  
6 have lots more, the houses really look like they are  
7 on top of us. So our privacy is gone completely.  
8 Secondly, in the proposals, because we have a concern  
9 about water run off, they've proposed swales and we  
10 have asked for precedents for swales being used on  
11 those steep slopes. I studied landscape architecture  
12 and I am a master gardener for San Mateo and San  
13 Francisco Counties, and I've never heard of that. I  
14 won't say it doesn't happen, but I was never taught  
15 that in school, that that would be an appropriate use  
16 of a swale so we asked for details about the mechanics  
17 and if they have precedents. We never received any  
18 information, so our concern is that's an inadequate  
19 way to handle the run off there.

20 Third, removing the soil, you know, the top  
21 soil, stripping it. I've been doing some research and  
22 teaching and also studying. Really involved in the  
23 life cycle the soil. Terry Lingso there has brought  
24 in a lot of speakers and pulling all the good soil  
25 off. Sticking it to the side basically kills it. I

1 know it sounds hippie-ish, but there is a whole life  
2 inside that soil and that life supports the things  
3 that grow. If we pull that all off aside, strip and  
4 regrade for a few years, all that life is going to  
5 die. They are going to put it back, try to plant  
6 trees, spray the grass seed and think that's going  
7 grow in a healthy and quick manner when actually the  
8 soil is going to be missing a lot of what it needs to  
9 help the plants grow. So if something else is  
10 happening, you know, we would like to know what those  
11 improvement to the soil would be. You can look at the  
12 old pictures of erosion and you see grass, and then  
13 you see soil -- I mean, erosion -- or you see a few  
14 bushes or trees. Those haven't done the job, so  
15 that's a big concern for us.

16           Additionally, I know, and somebody else may  
17 speak on this, but Rainbow Street, which was held up  
18 as an example of the engineering progress that's been  
19 made to date to allow a building on such a steep  
20 slope, they are back to having slides again, and  
21 that's an area very near us that continues to have  
22 problems. So we would request that you take that into  
23 consideration or look at that when you are evaluating  
24 these homes.

25           Then personally, let's see. It shows that

1 the water main is going to be tied into the current  
2 easement which runs between our house and the  
3 neighbor's, but would be behind our yard, and our  
4 question is, exactly where? And we have three mature  
5 Monterey pines, aged somewhere between 50 and 75 years  
6 according to two arborists, and we are concerned about  
7 possible damage to their health. So we are hoping  
8 that they are going to use the 2013 arborist standards  
9 when considering what to do with mature trees and how  
10 to protect them. I know they've been updated.

11           Let's see. The hammerhead also points right  
12 to our two kids' bedrooms, so clearly we are concerned  
13 about not only the privacy, but the safety that's  
14 involved there. For everyone who has talked about  
15 their house moving, ours is only eight years old. We  
16 basically rebuilt our house, and I had someone in  
17 today for the second time because the house has moved  
18 and things have been adjusted and it's not a lack of  
19 quality building by the builder; it's just things  
20 move. The ground shifts, and that's Parrott.

21           Finally, on Parrott Drive, there are blind  
22 spots on that road, and we've lived there since 2000  
23 and have seen three accidents where cars have actually  
24 left the street and ended up in yards. So certainly  
25 with any added traffic, we are concerned about that.

1 So I'd like that to be taken into consideration, too.

2 Thank you.

3 MR. WILSON: Angela Strickley.

4 ANGELA STRICKLEY: Hi my name is Angela  
5 and I want to talk about the health impact and the  
6 traffic.

7 As the construction started, our house  
8 will be filled with smoke of the heavy congestion.  
9 Traffic passes our front door every two to three  
10 minutes for 44 days. It's like almost continuously.  
11 It can be a very intense interruption for our daily  
12 life and it will be -- the whole construction will be  
13 lasting for about 10 years, that's a long period of  
14 time. We are very concerned, and these persons, this  
15 person is bringing noise to our beautiful quiet  
16 neighborhood, and these are diesel exhaust and smoke  
17 will cause a long term health impact to all of us.  
18 The pollutants from the dust and diesel engines such  
19 as a nitrogen, oxide and carbon monoxide can cause it  
20 to be hectic on your respiratory system. The  
21 pollution can cause irritation in the respiratory  
22 system. And it's very harmful to someone who is has  
23 asthma and other lung disease such as COPD. It's a  
24 life threatening condition. For people who have an  
25 allergy to the pollutants from dust and diesel exhaust

1 and smoke, the pollutants will cause a bad immune  
2 system by inducing the muscular inflammatory reaction  
3 around the tracheal area. If that happened, the  
4 person will feel like choking. It can be deadly if  
5 not taken to emergency immediately. That kind of life  
6 threatening condition for the County needs to be  
7 considered and the dust and smoke also can cause the  
8 same consequences into many healthy people because of  
9 those pollutants. The normal people, their  
10 respiratory system and the immune system, the normal  
11 can arrest the function.

12           The second concern is the noise,  
13 because those big heavy trucks will be on the road  
14 every two to three minutes in and out for 44 days, and  
15 those are noisy. It's hard to imagine. A lot of  
16 people work at home. They stay at home Monday to  
17 Friday 9:00 to 5:00, and a lot of the elderly people  
18 live here and they stay at home mostly and those  
19 noises can be very annoying. We do not deserve that  
20 kind of congestion to return to our neighborhood into  
21 a dust bowl, dusty, noisy and full of traffic jam. We  
22 do not deserve to raise our children in a dust bowl in  
23 that kind ever environment and let children have a  
24 terrible experience. We do not deserve to live in  
25 this harmful environment. We do not deserve the

1 congestion. It will change our daily living, and for  
 2 the health impact, we are required the developer to  
 3 provide 30 years of health insurance if someone has  
 4 asthma or COPD or has a hearing impaired or ringing  
 5 ear, some kind of, the ear malfunctioning because of  
 6 the noise because of the dust. We ask the developer  
 7 to pay the responsibility for that. And for the  
 8 noise, it's unavoidable. And we would like to ask for  
 9 the compensation and for people who cannot stand the  
 10 noise, they may have to stay away for the 44 days and  
 11 we would like to ask that the developer to pay for the  
 12 moving and the rental for that 44 days. We deserve  
 13 the developer to be responsible on their actions.  
 14 It's their land. We understand they can do what they  
 15 wants by the county permit, but we live here. It's  
 16 our home. When something happens, it's not just to  
 17 the house structure damage. It's someone's home and  
 18 someone's life. I would like to ask the County to  
 19 please consider, and we do want to see the high  
 20 responsibility written from the environmental impact  
 21 reports. Thank you.

22 MR. WILSON: Kim Ricket.

23 KIM RICKET: Hi. I just want to start  
 24 off, my name is Kim Ricket. I live on Ascension  
 25 Drive. I want to say that I'm not opposing to putting

1 houses on the hill, but I want to do it responsibly.  
 2 I understand this is a scoping meeting and that you  
 3 will be referring to the previous EIR, which I think  
 4 is very important. These are things that I want to  
 5 make sure are also included.

6           For geology, you say the EIR will address  
 7 the proposed project for soil erosion during  
 8 construction. Please also consider after  
 9 construction. I don't know if this would be an  
 10 indirect impact that you mentioned. The old EIR  
 11 references the slide between Rainbow and Pulhima and  
 12 the slide and then reslide between Rainbow and  
 13 Starlight. It needs to reference the earth movement,  
 14 and while our HOA was required to build between Los  
 15 Altos Drive and Parrott Drive, to stop those houses  
 16 from falling down, and that's the very same hill right  
 17 around the corner and even after this brand new wall  
 18 was built, the hill continued to slide and repairs  
 19 were needed. So I'd like to see that in the report.

20           Given that the slides have happened all over  
 21 the neighborhood, including on the very same hill, it  
 22 seems very possible that such a wall might be needed  
 23 at some point. I haven't seen anything from the  
 24 developer saying that the way they grade is any  
 25 different than the way that any of these previous

1 developers have graded the land, and if such a wall is  
2 needed to be built, the aesthetics need to be  
3 considered, because looking at one of those big steel  
4 wooden I-beam walls is much different than looking at  
5 simply a graded, slope even if that slope hasn't been  
6 painted.

7 I also think you need to consider what the  
8 financial impact would be if our HOA has required it  
9 build another one of those walls to prevent some of  
10 those houses to come down on us again. For air  
11 quality, please include long term exposure issues. If  
12 the project is not completed on time or is left  
13 unfinished, if they aren't watering down the dirt each  
14 day, how much blow into our neighborhood from under  
15 planted unfinished lots. For air quality and hazards,  
16 please include a method for testing for asbestos, not  
17 just for surface soils or at the beginning of the  
18 project, but as all this excavation is taking place.  
19 You can reference the EIR for the Water District  
20 project that took place on the other side of Ascension  
21 which tested for soil as it was excavated. I have  
22 young children, and if there's asbestos in the soil, I  
23 don't want us breathing it. I don't know if there is,  
24 but there's serpentine rocks on those hillsides. It  
25 needs to be taken into consideration.

1           If trees are removed, please consider how it  
 2 will change the patterns of air flow in surrounding  
 3 neighborhoods. Some of those trees get really heavy  
 4 winds, especially during the afternoons and during  
 5 storms, and losing wind breaks could have a serious  
 6 effect on trees in our yards and have them blow over  
 7 as some trees have done.

8           For biological resources, please make sure  
 9 these are examined at the proper time of the year.  
 10 I've seen mission Blue butterflies in the  
 11 neighborhood. I don't know if they are on the  
 12 hillside, but if you look for them now, you are not  
 13 going to see them. They only come out for a few weeks  
 14 at the end of spring, and finally, I understand you  
 15 will consider a no project, and I also understand that  
 16 for the developer, that's not an ideal situation. So  
 17 I do ask you to also consider something like a minimal  
 18 grading project. Many of the environmental concerns  
 19 relate to the grading and movement of soil. At a  
 20 quick glance, it appears that lots seven and 12 on the  
 21 Los Altos sides and lots 16, 17, 18 and 19 on the  
 22 Ascension side are building built right on those  
 23 steepest edges of the slope and might be requiring  
 24 more grading than is absolutely necessary to build a  
 25 subdivision on this hill. Please do consider that a

1 project that would limit the scope of grading, just  
2 build homes on the flat part of the hill, and that  
3 might alleviate many of these concerns. Thank you  
4 very much for your attention.

5 MR. WILSON: Thank you. We've got more  
6 cards, so what I'm going to do is announce the next  
7 one, and right now can we get Craig Nishizaki, and  
8 following that would be Suzanne Kennedy.

9 CRAIG NISHIZAKI: Name my name is Craig  
10 Nishizaki and I live 1474 Parrott Drive. I'd like to  
11 thank the County very much for hosting this meeting to  
12 get our inputs in the neighborhood. I think we  
13 appreciate that. Also I want to thank all the  
14 neighbors who showed up. Through talking to the  
15 neighbors, neighbors talking to other neighbors, we've  
16 gotten a lot of good feedback from them, and as you  
17 can tell, they are very concerned about this project.  
18 As Kim mentioned, in general, we are not against any  
19 development, but we are really for responsible  
20 development. So I'd like to talk about two issues.

21 I'll start first with issues that affect  
22 residents that live on Parrott Drive that have their  
23 backyards right bordering the project and talk about  
24 some general issues about what we'd like to see in the  
25 environmental impact report. So you saw a slide where

1 on the -- you are looking from what would be our  
2 backyards, and there's a slope, and then the houses,  
3 and the effect is when you are looking up, we are  
4 imagining that these houses are virtually looking like  
5 they are right on top of us, and we talk about  
6 invasion of privacy. It's just -- I think the initial  
7 plan in 2009, there was at least a setback there of  
8 20 feet, 30 feet, whatever, but that really needs to  
9 be studied. Let's put the story poles up. Let's  
10 simulate and let the neighbors see what it's going to  
11 look like because it's really hard to look at and you  
12 are looking straight up, or the neighbors are looking  
13 straight down at you, and it's not a believable  
14 condition. I think also on Parrott during the  
15 construction and also after the construction, we are  
16 imagining the noise and the pollution are going to be  
17 pretty bad for us. Again, I think that needs to be  
18 studied closely. Pushing back the development some  
19 number of distance, I think, will help, but there's a  
20 lot of concern with the closeness of all that  
21 construction.

22           So the other thing, in terms of the draft  
23 environmental impact report, looking back at some of  
24 the issues from the 2009 EIR, I think some of the  
25 improvements we'd like to see or I'd like to see is

1 for the report to be a lot more comprehensive. It  
2 talked about all the environmental issues, but really  
3 it didn't analyze them closely. As mentioned,  
4 traffic, traffic was assessed. They even brought out  
5 trucks to show that the trucks could actually make the  
6 turns, and there was actually a video about that.  
7 What they didn't show was how slow the trucks had to  
8 go around each of these turns and how it potentially  
9 could back up traffic, and actually, if you look at  
10 the end of the video, as the truck is turning from  
11 ferret turning left on Laurie Lane, there's actually a  
12 car that is trying to get around the truck, which  
13 everyone knows that's a very dangerous place to do  
14 that. So there wasn't really enough comprehensive  
15 analysis, not enough study. I don't think the  
16 consultant talked with neighbors at all to get their  
17 concerns and to really probe deeply. I think there  
18 was a lot, as Jerry mentioned, there was a lot of  
19 input and verbiage in the DEIR that seemed to be  
20 dismissive of the concerns that the neighbors have.  
21 So I think those issues should be more thoroughly  
22 researched and not dismissed so easily, and I think  
23 words like in terms of controlling terms of monitoring  
24 air quality and noise, and when there are limits, I  
25 think words like you must adhere to being below those

1 limits as opposed to "should" or "could," I think the  
2 verbiage in the report needs to be much stronger.  
3 Also, the statement that was shown where if air  
4 quality or noise violated the limit, verbiage or words  
5 like or a sentence like they were determined, the  
6 limits were seeking limits and they were determined to  
7 be significant but unavoidable, I think that should be  
8 avoided. I don't think that's very respectful to the  
9 neighborhood that you are telling them "it's okay that  
10 you violate all these limits" for these living  
11 standards and we can't do anything about it. You  
12 definitely can do things about it. You can scale back  
13 the project; you can suggest that the project be  
14 changed so that the neighborhood is protected. And I  
15 think options were covered in the DEIR, but not --  
16 they were just put out there. There was no details on  
17 it. I think an analysis comparative analysis of this  
18 project to some of the options of the consultant is  
19 reviewing so that we can see, okay, if there's another  
20 option of half the homes, how will the traffic impact  
21 be reduced? How will the air quality be reduced? If  
22 the options were in the DEIR but they weren't really  
23 studied, and I think that will help everyone  
24 understand what the impact could be and how it could  
25 be changed. Again, thank you very much for holding

1 this meeting and one thing, I hope that the  
2 consultants can be respectful of the neighborhood. A  
3 lot of people live here. We love living here. Again  
4 we are not opposed to the development, but we care  
5 about our daily lives. Thank you.

6 MR. WILSON: Following Suzanne Kennedy will  
7 be Raymond Yu.

8 SUZANNE KENNEDY: Hi. My name is Suzanne  
9 Kennedy. I live on Los Altos Drive. I had two things  
10 I wanted to touch on that have already been said, but  
11 I just want to reiterate my personal concerns.

12 I have three small children under the age of  
13 ten, and most of my concerns are about our health and  
14 safety. I'm concerned about the impact on the air  
15 quality. They play outside a lot. They ride their  
16 bicycles, so I'm very concerned about how is this  
17 going impact them at a very formative time in their  
18 life. Also I'm a runner and I run pretty much every  
19 day right around this project site, so personally I'm  
20 concerned. I guess I would have to probably cease  
21 running in the local area or outside while a lot of  
22 this work is being done.

23 Also, my home is directly below the  
24 retaining wall that was mentioned before between Los  
25 Altos and Parrott. I'm particularly concerned about

1 any stability issues we might have, and even though  
 2 the wall is maintained by everyone in San Mateo Oaks,  
 3 any movement in it is going to directly impact my  
 4 family or safety or the property. So my main concerns  
 5 are the air quality and the soil stability on the  
 6 hillside. Thank you.

7 MR. WILSON: Thank you. And following  
 8 Raymond Yu will be George Mitroff.

9 RAYMOND YU: Hi. My name is Raymond Yu and  
 10 I'll try to make this quick since my comments are  
 11 specific to just my house, and I'm homeowner at 1444  
 12 Bel Aire Road. From the drawing of the proposed plan,  
 13 my home will be one of the two homes directly across  
 14 the road leading up to the hill; thus I will be  
 15 directly affected by the traffic driving down the hill  
 16 and headed straight at my home. At this point, I'm  
 17 going to keep an open mind about the overall project  
 18 but, if the Planning Department is inclined to move  
 19 forward with the project, I'd ask that the department  
 20 would consider the safety and use of my home in the  
 21 planning of the project. I'd like to point out that  
 22 the road connecting Bel Aire to the hill forms a T  
 23 intersection, and since it leads up to a hill, the  
 24 road will be fairly steep, and that road leads  
 25 directly to the front of my house. Having experienced

1 a number of car accidents involving drivers under the  
2 influence and cars whose brakes have malfunctioned,  
3 there's a strong possibility that an out of control  
4 car will come crashing into my home. If the project  
5 is going to move forward, I ask that the Planning  
6 Department consider that the developer should have to  
7 build a retaining wall of some sort along the front of  
8 my home or along that sidewalk and possibly my  
9 neighbor's homes if he's so inclined. The wall should  
10 also be at least six feet thigh and block car  
11 headlights since cars turning will be aiming  
12 headlights directly into my bedroom window, and that's  
13 my comments. If you have any questions, you can  
14 contact me. My information is on the comment card.  
15 Thanks again.

16 MR. WILSON: Following George will be  
17 Rosemary Thomas.

18 GEORGE MITROFF: I have a very quick  
19 question. Who is buying the court reporter here? Is  
20 that the County doing this?

21 Okay. Then the County is on actual  
22 constructive notice. The reason I bring this out is,  
23 the last time we were here, this is only restricted to  
24 the environmental impact issues. The last time we  
25 were here, we talked about the significant risk of

1 movement of the earth in this project. That ties in  
2 with who is responsible. Ron Johnson brought out a  
3 very interesting principle. He mentioned specifically  
4 having the developer purchase a bond for 30 years that  
5 warrants his development. All the retaining walls,  
6 all these other issues that we bring about. All these  
7 air quality issues are short term, but the real deal  
8 is when the ground starts moving, if he puts all these  
9 homes on this hill, that's going to be a real problem.  
10 It's nearly impossible to sue a County, and certainly  
11 if the developer backs out of the situation by  
12 bankruptcy or whatever, they use all kinds of  
13 nefarious things to shield themselves from personal  
14 immunity, but this construction bond, this warranty,  
15 would certainly alleviate a lot of concerns that this  
16 neighborhood has. I am getting the feeling this  
17 developer is using the bait and switch method. He  
18 starts with a very high number of homes and keeps  
19 scaling back, scaling back, scaling back. But the  
20 bottom line is money. He has to put in a significant  
21 amount of money to keep that hill from moving if he  
22 wants to put all those homes in. So would I think  
23 intuitively, he would figure out that it's cheaper for  
24 me to put fewer homes, charge a higher price so I can  
25 get a return on my investment and not have to put in

1 all this engineering. That would alleviate all these  
2 truck movements and moving mass amounts of dirt and  
3 what not. So I think it all boils down to money, but  
4 I think Mr. Johnson hit the nail right on the head.  
5 The County should insist on a bond of some sort to  
6 warranty that the development that he makes and  
7 ultimately all the engineering and retaining walls  
8 that he's going to have to put in to make this float  
9 actually are funded by some insurance policy that  
10 would keep the homeowners off the hook if the hill  
11 starts moving. Thank you.

12 MR. WILSON: George, could you pronounce  
13 your last name for me?

14 GEORGE MITROFF: Mitroff.

15 MR. WILSON: And then following Rosemarie  
16 Thomas will be John Mathon.

17 ROSEMARIE THOMAS: Thank you. I'm Rosemary  
18 Thomas and we live on Bel Aire road on the corner of  
19 Ascension and Bel Aire across from the ugly erosion  
20 and the pipe. My concern mainly is the traffic and  
21 also fire access. Originally I thought the developer  
22 was going to put in an access road to allow fire  
23 trucks to get onto the property in case of an  
24 emergency, and the last drawing that we saw, that road  
25 was removed. Also access to the property from Bel

1 Aire, the turn is very narrow and it looks like he's  
2 going to have to take out more of the side of the  
3 hill, which is also very steep, going onto the road  
4 that is existing now and that will remove more of the  
5 landscaping, the trees that are there that are  
6 currently holding that property up. So I wanted to  
7 know, or can we address the fact with the developer,  
8 if he's going to have to widen that road so that the  
9 trucks can make that turn onto the property, and also,  
10 is he going to put in an access for fire trucks?  
11 Because if we remember from the Oakland Hills fire,  
12 there was one access in and out, and many homes were  
13 destroyed because the fire trucks could not get in,  
14 and that's one -- several of my concerns. Thank you.

15 MR. WILSON: Thank you. And then following  
16 John we will have Linda Ozanne.

17 JOHN MATHON: John Mathon. I moved into  
18 1450 Parrott. It's where the construction will be  
19 happening. I will be in the unfortunate position that  
20 trucks will be coming by the front of my house,  
21 turning around, and then directly at my back property  
22 line actually constructing the road which abuts my  
23 property at the back property line. So they will be  
24 building that thing right there. All of the earth  
25 moving equipment will be going up and down, right and

1 back, and coming around and coming in front of my  
2 property and literally surrounded by these trucks and  
3 this thing for a period of the construction. It's  
4 kind of a scary thing to think about, and I just moved  
5 into this property two months ago. We saw, a week  
6 after we got, in the notice that the County had this  
7 thing that was going to be proposed and so you can  
8 imagine the shock here of having moved into this  
9 extremely bucolic, serene, neighbors are commenting  
10 how quiet, unbelievable the view is, how, you know, we  
11 feel like this and imagine that in six or nine months,  
12 we are going to be in this war zone of construction  
13 equipment and stuff going on. It's hard to  
14 understand. But one of the things that -- before I  
15 bought my house, I was looking at 1406 Rainbow. This  
16 is mentioned by several other people, but I was  
17 thinking of buying that property and I got all the  
18 disclosure documents. In that disclosure, and as many  
19 people pointed out, the hillsides here have  
20 experienced something like 50 hillside failures in the  
21 last I don't know how many years, but in the reports I  
22 received on all the engineering that was done, that  
23 property was destroyed as the hill fell some number of  
24 years ago, 1999, and then they rebuilt after the hill  
25 was reconstructed. But this \$2.6 million dollar

1 mansion of five bedrooms, five bathrooms, is now  
2 selling for \$1.1 million, and it needs \$400,000 of new  
3 piling and new construction to restraining piers and  
4 deeper construction. So when these people build the  
5 properties on this hill, I'm worried because now that  
6 I've heard from people is this land suitable for  
7 building these kind of homes, the JCP report that went  
8 with Rainbow said there should be no more than about a  
9 15-degree tilt on any house construction, but when I  
10 look at the drawings, some of the houses show  
11 40 degrees or higher tilt. What is the level of tilt  
12 that's allowed in this county and what should be the  
13 amount that is allowed? So I feel there's a lot more  
14 that has to be studied as to why Rainbow failed. They  
15 had done bore holes. They had determined the land was  
16 stable. They had done all this stuff, and yet the  
17 house continues to fall and fell five inches in the  
18 last five years. Obviously, if those people get these  
19 houses, will they be of this kind of potential issue?  
20 How will this be paid for if it impacts us or them?  
21 It seems like a big issue. This land seems  
22 questionable for building this kind of stuff on to me  
23 just looking at what I'm seeing in all these reports  
24 and things.

25 The other thing is the noise. In the

1 existing report that I saw in 2009, they talked about  
2 88 decibels of noise level that will be generated from  
3 some construction activities. That seemed kind of  
4 low, but in any case, we currently experience in our  
5 current ambient sounds probably about 30 decibels, and  
6 I found it. It's around 30. We are in a very bucolic  
7 area. We don't have a city nearby. If you are in a  
8 New York city and somebody is building construction  
9 next to you, it's kind of normal sounds in that area.  
10 When we are here, we are hearing birds all day, little  
11 chirps from half a mile away. We will all be  
12 experiencing at least 20 to 30 DB in additional noise  
13 that we will all for 10 years or five years that we  
14 will be experiencing 20, 30 DB's, higher noise levels.  
15 That's a tremendous impact on the communities and what  
16 our current ambient kind of sound is compared to what  
17 we will get in the near future, and it seems like  
18 something that has to be mitigated and the only way I  
19 can imagine is somebody has to study what is the  
20 current sound, what is the sound that we generated  
21 from these things, what number of houses will be  
22 affected. I'd like to see that kind of stuff in the  
23 new report. I also feel having lived in the Bay Area  
24 for 30 years or so, this is a very windy area up in  
25 the hills here. I don't know in the previous report

1 which described watering the sand and all of the  
2 debris twice a day was what they were projecting.  
3 Would that be adequate considering the wind? Should  
4 we do a wind study and try to understand what are the  
5 winds like in this area at various times of the day in  
6 various areas? Because I do feel like there's a high  
7 probability that debris will be blown around, that the  
8 winds are very severe. I find that my pool cover is  
9 totally removed by the time I wake up in the morning  
10 from the severity of the wind. So there's a lot of  
11 wind here. I think somebody needs to study that.

12 I mentioned some of the privacy issues. As  
13 people have mentioned, the privacy issues both during  
14 the construction and during the actual subsequent,  
15 there will be people around that peak into our  
16 backyard where our pool and hot tub is. It changes  
17 the completely private environment we have. It erodes  
18 the whole value that we feel about this house right  
19 now, and this environment. This neighborhood feels  
20 destroyed, and when people are coming down that road,  
21 their lights from their cars from the high point will  
22 be pointing down into our backyard, and I don't know  
23 if they will actually point directly into our bedroom,  
24 but they will be maybe slightly off from our bedroom.  
25 We don't know the exact amount of light, but it will

1 probably require us to put some modifications to our  
2 house or something to prevent that light, because  
3 otherwise it's going to make sleeping in our bedroom  
4 intolerable.

5           So we just anticipate a tremendous amount of  
6 loss of quality of life from this construction  
7 activity and even the subsequent problems. So  
8 that's -- I could talk about other things, but other  
9 people have talked about it. I hope you can consider  
10 those issues in your report.

11           MR. WILSON: Thank you. And then following  
12 Linda will be Greg Kanaga.

13           LINDA OZANNE: My name is Linda Ozanne.  
14 I live on Enchanted way, and in fact, we live next to  
15 George, who spoke effectively about the density  
16 problem. I think the real issue with this entire  
17 communities is that density problem. The developer  
18 has not compromised on that. To go from 25 to 19  
19 means nothing when you look at his pilot map. His  
20 design is unimaginative. It is ugly. It encroaches  
21 on Parrott. He is dealing with property that has some  
22 of the best views in the entire county. He could take  
23 advantage of that with several, maybe half a dozen  
24 really lovely homes and probably make as much money as  
25 he's hoping to make with the huge footprint of houses

1 that he's putting on tiny lots and encroaching on  
2 Parrott in such a significant way.

3           So I think the real reason the community is  
4 so opposed to the development is because of the  
5 character of it and because of the lack of compromise  
6 on the part of the developer, and I don't think that's  
7 going to change.

8           MR. WILSON: Thank you. Now Greg.

9           GREG KANAGA: My name is Greg Kanaga,  
10 1441 Enchanted Way. My family moved there in 1965,  
11 and so we have beared witness to a lot of change in  
12 the area, a lot of building. And I can tell you  
13 firsthand what it's like having those diesels going up  
14 and down on Ascension Drive, grinding their gears.  
15 They are loud; they are noisy; they smell. And it  
16 goes on all day long. And you know, there wasn't  
17 much -- I was a kid. I couldn't do much about I  
18 didn't have any say on what was going to be developed  
19 but we always used to, at least we've still got the  
20 water tank hill. And now they are taking that away,  
21 and you know, enough is enough. I mean, the reason we  
22 love our neighborhood is because of the aesthetics. I  
23 like to drive home on Parrott and see that foliage on  
24 the left side, and it's just a beautiful thing to be  
25 able to come home and not to see homes and homes and

1 homes and know that there's wild life living up there.  
2 We have red tail hawks that live up there. We have  
3 deer, you know, coyotes, you name it. Mountain lines,  
4 and this is all encroaching on that. I know it's a  
5 small area, but it makes a big difference when you  
6 start, I mean, at what point do we decide that it's  
7 enough? What do we benefit from having those homes up  
8 there? I'd like to know. Is it taxes? Are we going  
9 to benefit from the income of this additional tax that  
10 these homes are going to get? In that's the only  
11 reason for doing it, then I'd like to go on record as  
12 being opposed to it.

13 That's all I have to say.

14 MR. WILSON: Those are all the comment cards  
15 that I have. If no one else would like to speak, then  
16 that would basically conclude the scoping hearing. I  
17 would like to remind everyone that this quote, unquote  
18 "scoping period" of the notice of preparation ends  
19 November 4th, and you can send in your comments. You  
20 don't have to fill those out tonight. You can take  
21 them home, and they have the address to send in  
22 comments. And as we work on the EIR, all these  
23 comments will be considered, and there's special  
24 sections of the EIR that will summarize the comments  
25 that we've received and as we stated earlier in the

1 presentation, once the draft EIR is released, there  
2 will be another opportunity to come in and let us know  
3 the job you think we did, which I know everyone will  
4 love it and give me a standing ovation, and we are all  
5 ready for that. We definitely appreciate you all  
6 coming. This was great. Definitely received some  
7 great comments and we appreciate it.

REPORTER'S CERTIFICATE

STATE OF CALIFORNIA )  
 )  
COUNTY OF SAN FRANCISCO ) ss.

I, KRISHANNA M. DERITA, a Certified Shorthand Reporter, licensed by the state of California and empowered to administer oaths and affirmations pursuant to Section 2093 (b) of the Code of Civil Procedure, do hereby certify:

That the said proceedings were recorded by me stenographically and were thereafter transcribed under my direction via computer-assisted transcription;

That the foregoing transcript is a true record of the proceedings which then and there took place;

That I am a disinterested person in this action.

IN WITNESS WHEREOF, I have subscribed my name on October 24, 2013.

KRISHANNA M. DERITA

**Subject:** Re: November and December Ascension Heights meetings

Great - thank you very much for the confirmation. Enjoy your week.

Heather

>>> Gerard Ozanne < >>> 10/28/2013 10:25 AM >>>  
Hi Heather,  
Both dates will work for me.

Thanks,

Jerry

Good afternoon Jerry,

At the request of Jim Eggemeyer, I'm writing to confirm the next two Ascension Heights meetings:

Friday November 8, 2:00 PM - 3:30 PM  
Room 201, Planning & Building Department, 455 County Center

Tuesday December 3, 3:00 - 4:30 PM  
Room 201, Planning & Building Department, 455 County Center

Please let me know if you have any questions.

Thank you,  
Heather

Heather Hardy | Executive Secretary, Planning and Building Department | County of San Mateo | 455 County Center 2<sup>nd</sup> Floor Redwood City, CA 94063 | (650)363-1859 |

**Subject:** Meeting transcript

Hi James,

Jim directed me to give you the hard copy of the Ascension Heights 10/9/13 meeting transcript, so I left it today in your chair. Jim asks if we have plans to post the PDF'd transcript on our website.

Please let me know.

Thanks,  
Heather

Hi Jim and James,  
We've included the Baywood Park HOA Scoping Comments. We look forward to translating the Community expectations into an effective DEIR.

Please acknowledge receipt of this email and attachment.

Thank you for all your efforts,

Jerry

## Baywood Park Homeowners Association Scoping Comments

Ascension Heights Subdivision  
November 4, 2013

### General Concerns

*[Community Expectations for DEIR:*

1. **Reduced Density Alternative (CEQA).** “.... The assessment of project alternatives will be consistent with this requirement by presenting a sufficient amount of detail necessary to afford decision makers with a reasoned choice.”  
**Statement Of Work—AES**

*There are critical impacts of this project that would be substantially reduced and possibly minimized to “less than significant” by adoption of the Reduced Density Alternative. The Decision Makers cannot be afforded a “reasoned choice” without quantitative impact comparisons between the Proposed Project and the Reduced Density Alternative. We have indicated the impacts most sensitive to Density comparisons, which are essential for achievement of a “reasoned choice”.*

2. *Define who will be responsible for maintaining common areas, Conservation Areas, and subdivision systems (e.g., swales, rainwater control, fugitive dust management, erosion) and who, or what entity, will assume legal liability due to any failures. Specify in the DEIR all Covenants, Conditions and Restrictions (CC&Rs) required for the project and incorporate those CC&Rs in all analyses.*
3. *Describe in one location in the DEIR all impacts on the current homeowners on Parrott Drive adjacent to the proposed development.*
4. *Subdivided, single-family homes to be built are not described. This subdivision is the discretionary permit that would allow a conforming single-family home to be built on each new parcel. The DEIR should analyze the effects of these houses. If the developer is not able to provide information or assumptions of the size and number of stories for these homes, the DEIR should assume the maximum size that could be built on the lots, using the zoning setbacks and 3-story home heights.*
5. *Project Phasing: The initial rough grading of the site has been stated to last about 45 days, followed by a 6-month period to construct the private street. It estimates home build-out to be an additional 5-10 years. Until home construction is completed and replanting and landscaping is complete and survives, the site will undergo erosion of exposed sand stone, excess surface water drainage, and dust pollution. Despite the excessively prolonged construction phase, a stable project site must be ensured by the DEIR.*
6. *Hours of the day for construction and truck traffic as well as days of the week activities must be specified.*
7. *Assess how the Parrott homes will be affected during the construction from dirt, debris, and rocks being pushed down the slope onto the Parrott homes, e.g., fences and backyards. Include what will be done to prevent and to fix and clean up these intrusions as they occur.*

8. *Assess the degree of light pollution shining onto neighboring homes from the site at night, and describe how onsite night-time lighting will be shielded from neighboring homes. The construction activities will persist for 5-10 years and impart yet another significant annoyance. Mitigation should be managed through consultation with impacted residents.*
9. *Formally notify CSM of project proposal.]*

## **I. Aesthetics (CEQA)**

**“Would the project:**

**Have a substantial adverse effect on a scenic vista?**

**Substantially degrade the existing visual character or quality of the site and its surroundings?” –CEQA**

*[Community Expectations for DEIR:*

1. *Assess impacts of proposed development on the vistas as seen from nearby homes on both sides of the streets (Parrott, Bel Aire, Ascension, CSM Drive), as well as character and quality of these surroundings.*
2. *Assess impacts of proposed development on the vistas as seen from further distances (e.g., from Polhemus, Bunker Hill), as well as character and quality of these surroundings.*
3. *Assess privacy intrusion on Parrott Drive homes and backyards both during construction and from the proposed development on an ongoing basis. Include the ongoing impact of car lights from the hammerhead turnarounds and the new road illuminating specific Parrott neighbors’ yards and houses. Include the impact of car traffic and car lights from the new road adjacent to the Parrott home shown as “lot 4” (has a pool in its backyard) on the proposed plans given that the new street appears to come within a couple feet of that Parrott home's backyard.*
4. *In addition, assess the privacy intrusion on Parrott Drive homes given the proximity and slope of the proposed properties.*
5. *Assess effectiveness of visual separation provided by newly planted trees (describing appropriate factors including required tree numbers, sizes (heights and spreads), maturity at planting, time to adequate maturity) (a) in the easement between Parrott homes and the development and (b) on the other boundaries of the development*
6. *Evaluate effectiveness of easement proposed by Developer between Parrott and the proposed development to provide visual privacy and noise reduction for residents in each set of homes. Describe easement width and landscaping plan for providing that visual privacy and noise reduction. Describe location for backyard fences for the Ascension Heights properties on their side of the easement.*
7. *Assess landscape maintenance plan for the trees and foliage within the easement*

*between Parrott and the proposed development, including the degree to which the width of the easement will be sufficient for healthy tree growth and maintenance.*

- 8. Evaluate the open space proposed by Developer, including the appropriateness of planned landscaping and re-grading and its contribution to the vistas in the area.*
- 9. Include in the assessment Story Poles, which are essential to adequately assess backyard intrusions due to increased elevation and slope of final graded surface as well as current heavy tree and bush growth, which obscures views.*
- 10. Provide detailed assessments for the Reduced Density Alternative]*

## **II. Agricultural Resources (CEQA)**

*[Community Expectations for DEIR:*

- 1. Evaluate “tree replacement” plan proposed by Developer, including numbers and species of trees removed versus numbers and species of trees planted, chance for healthy growth given the conditions on the hill, size (height and spread) and maturity of replacement trees, maintenance plan for continued tree health, and a multi-year plan and guarantee for tree health.*
- 2. Evaluate the ecological contribution of proposed Open Space, including the diversity and use of native plants.*
- 3. Incorporate the variable conditions on the hill (wind gusts, water, and soil health) on the likelihood of success of the landscape development plans, both during the multi-year build-out period and permanently.*
- 4. Propose a specific solution to ensure 5-10 year longevity for all plantings and estimate cost of the plan.]*

## **III. Air Quality and Greenhouse Gases (CEQA)**

*[Community Expectations for DEIR:*

- 1. Identify all specific classes of ‘sensitive receptors’ including fetuses— reference new study of birth defects secondary to 1<sup>st</sup> trimester exposures.*
- 2. Define assumptions, justifications and expertise used to build the most current URBEMIS model for predicting emission data (e.g., numbers of simultaneously operating equipment, age of diesel engines, type of fuel, exhaust catalyst, etc.) and detail peak and average TAC concentrations for each phase of construction. Include brake lining contaminants if trucks traverse down Laurie, Bel Aire, and Ascension.*
- 3. BAAQMD adopted “thresholds of significance” for air quality for Construction-related activities in 2012. Include these thresholds for evaluating the significance of the project’s air quality impacts.*
- 4. Assess effectiveness in reducing concentrations of PM10 and PM2.5 particles by using new, cleaner diesel fuel and new engines for both ‘off-road’ and ‘on-road’ usage.*
- 5. Include locally measured wind gusts from the site (measured at multiple times, and in particular late afternoons, during storms, and during seasonal transitional weather periods) in all air quality assessments.*

6. *Determine maximum site activity levels during “spare the air” days and any other conditions leading to unacceptably high TAC concentrations.*
7. *Assess effectiveness of CEQA phase 1 and 2 measures used to control fugitive dust.*
8. *Estimate dust volume deposited on houses and yards as function of distance from the construction site, off-site hauling routes and wind dispersion (possibly 40 – 50 mph).*
9. *Assess pollution impact (e.g., particulate matter, dust) from construction on nearby homes (Parrott Drive, CSM Drive, Bel Aire, and Ascension), as function of distance from the construction site, off-site hauling routes and wind dispersion). Include deposits specifically on solar energy panels (electricity and hot water), swimming pools, and outdoor plants.*
10. *Define necessary processes applicant will use to clean and remove dust from affected residences.*
11. *Since project is projected to last 5 -10 years, compute monthly fugitive dust for entire time hillside may be exposed due to non-planting of any area, estimated erosion rates for such areas, failure of plantings to survive the 10-year build-out, estimated erosion rates in those areas with failed plantings, and disruption of plants in Conservation Area.*
12. *Determine an effective, unbiased monitoring program for containment of all contaminants with power to halt operations when acceptable contaminant limits exceeded or other conditions warrant.*
13. *Include in the assessments impacts from trucks and equipment both on site and in use offsite (e.g., trucks that are idling on neighborhood streets awaiting entry onto the site).*
14. *Provide detailed, quantitative assessments for Air Quality Expectations 2,4,5,6,8 for the Reduced Density Alternative*
15. ***Conduct a comprehensive Health Risk Analysis.*** *Health risks of immediate, short-term (24 hours) exposure to air pollution are significant. The levels estimated in the 2009 Project of PM10 and PM2.5 emissions were sufficiently high to become a direct and immediate risk to the lives of people in the neighborhood and must be adequately evaluated and mitigated for the proposed plan as well as the Reduced Density Alternative. The preponderance of evidence demonstrating **immediate death, heart attack, stroke, asthma and COPD exacerbations increase immediately following short-term exposure (24 hours) of PM10 and PM2.5 contaminations.** This evidence has grown substantially with over 100 peer-reviewed, scientific studies demonstrating proximate (within 24-48hr) mortality and severe morbidities directly related to increased particle contamination, specifically PM10 and PM2.5. The adverse effects are cumulative and therefore proportional to both the concentration of contaminants and duration of exposure. The American Lung Association states (website, 2009): According to the findings from some of the latest studies, **short-term** increases in particle pollution have been linked to:*
  - i. *Death from respiratory and cardiovascular causes, including strokes,*<sup>21, 22, 23, 24</sup>
  - ii. *Increased mortality in infants and young children,*<sup>25</sup>

- iii. *Increased numbers of heart attacks, especially among the elderly and in people with heart conditions;<sup>26</sup>*
- iv. *Inflammation of lung tissue in young, healthy adults;<sup>27</sup>*
- v. *Increased hospitalization for cardiovascular disease, including strokes and congestive heart failure;<sup>28, 29, 30</sup>*
- vi. *Increased emergency room visits for patients suffering from acute respiratory ailments;<sup>31</sup>*
- vii. *Increased hospitalization for asthma among children; <sup>32, 33, 34</sup> and*
- viii. *Increased severity of asthma attacks in children.<sup>35</sup>]*

#### **IV. Biological Resources (CEQA)**

*[Community Expectations for DEIR:*

1. *The Mission Blue Butterfly question is key to determining the solution to the heavy, extensive erosion that has worsened substantially in the last six years since the 2007 assessment. A full assessment of the possible presence of the Butterfly does need be completed since the last assessment was indeterminate. The solution proposed in 2009 included no erosion remediation; thereby leaving the area “undisturbed and protected” is unacceptable.*
2. *If the new assessment does determine the probable presence of the Butterfly, acceptable erosion control methods must be explored and implemented as part of the mitigation. Appropriate planting might provide adequate erosion control without disturbing the Butterfly habitat.]*

#### **V. Cultural Resources (CEQA)**

#### **VI. Geology and Soils (CEQA)**

*[Community Expectations for DEIR:*

1. *The plan conveys many acres into a conservation area, which is steep and has experienced extensive, severe erosion and substantial slides above Bel Aire within the past two years. In 2009 and in subsequent discussions with the developer, there apparently is no intension to repair the erosion. This entire area will require a full assessment and recommendations for repairing and stabilizing the erosion by appropriate experts.*
2. *The time line for project completion is expected by the developer to be 5 – 10 years. Evaluate likelihood of increased and ongoing erosion during the build-out period. Erosion of lots and any unplanted areas awaiting construction completion will require assessment for mitigation solutions and continual monitoring of slope stability.*
3. *Many of the final lot slopes are very steep but don’t appear to be determined since the house layouts are not finalized and potentially may be modified by new house owners prior to building. Final, or maximum, slopes of appropriate steepness must be included in the project plans. Describe specific steepness for each proposed lot, and compare with County and City of San Mateo guidelines and current practices.*
4. *Assess impact of the grading proposal and multi-year “build out” period on soil*

*health on the hill. Include the “soil health” related credentials of the assessor.*

- 5. Present likely outcomes of the post-grading landscape plan (e.g., seed spraying) to stabilize the hill after grading and throughout years of the build-out period.*
- 6. Use updated analysis and information to assess hill stabilization, including specifically the new slide at the East end of Rainbow Drive on the location of a recently repaired major slide (~2003).*
- 7. Provide detailed assessments for the Reduced Density Alternative]*

## **VII. Hazards and Hazardous Materials (CEQA)**

## **VIII. Hydrology and Water Quality (CEQA)**

*[Community Expectations for DEIR:*

- 1. Assess after construction how the Parrott homes will be affected from debris, dirt, and water coming down the slope into their backyards during the initial grading phase, the build-out period, and on an ongoing basis.*
- 2. Use a 100-year storm model for all rainwater calculations given the numerous, recent large storms that have exceeded calculated 10 year maximums.*
- 3. Describe effectiveness of swales on equally steep hillsides and catchment areas in other developments.*
- 4. Assess potential for overflows from the swales onto Parrott Drive homes and down Bel Aire as a function of multiple rain falls over a short time time.*
- 5. Calculate the storm water flows down Bel Aire for capacity of curb containment and propensity for overflows at Ascension storm drain and contamination/damage to houses on Ascension and Valley View--include in calculations failures of Ascension storm drain due to debris accumulations.*
- 6. Multiple houses on Ascension and CSM Drives with property lines coincident with the project experience underground streams flowing under their houses often requiring sump pumps for water extraction. No assessments have been made to determine the location of these streams and the potential for disruption by the proposed construction. Assessments during the wet season prior to construction must be conducted and if flows increase after construction, necessary diversions constructed.*
- 7. Determine responsible party for maintenance of storm water system and legal responsibility for failures of the system.*
- 8. Provide detailed assessments for the Reduced Density Alternative]*

## **IX. Land Use and Planning (CEQA)**

## **X. Noise (CEQA)**

*[Community Expectations for DEIR:*

- 1. Assessments of peak sound levels at nearby, off-site homes must be calculated*

*with maximum and typical numbers of simultaneously operating engines (note that the noise levels produced by a single diesel engine exceeded thresholds and could not be mitigated according to the 2009 DEIR.). Assess the noise impacts during all phases of construction.*

- 2. Unacceptable sound levels must be defined with mitigation to include reducing the number of operating engines, improving mufflers, shutting off idling engines, etc.*
- 3. Assess truck haul noise levels along residential streets.*
- 4. Assess the noise impact from the trucks using compression braking if the route takes them down any steep slopes (e.g., Bel Aire to Ascension Drive).*
- 5. Sound levels must be continuously monitored by an independent service with the ability to halt activities as necessary.*
- 6. Provide detailed assessments for the Reduced Density Alternative.]*

## **XI. Population and Housing (CEQA)**

## **XII. Public Services (CEQA)**

*[Community Expectations for DEIR:*

- 1. The conservation areas apparently are to remain untouched by the developer. Eight to twelve foot brush is prevalent on the conservation areas. A fire assessment should be made of the potential for this very dry brush to cause a fire.*
- 2. The street layout includes two hammerhead turn-arounds and steep streets exceeding standard slopes that may impede access of fire trucks. The street layout needs to be re-assessed for fire safety.*
- 3. The entire subdivision has very limited off-street parking capacity, which will result in extensive on-street parking. Assess and describe access for fire trucks in the scenario of maximum used on-street parking from home owners and visitors; compare against current practices considered safe and normal within County and City of San Mateo.*
- 4. Describe the parking capacity for the proposed subdivision, to include on-street and off-street parking.*
- 5. Provide detailed assessments for the Reduced Density Alternative.]*

## **XIII. Recreation (CEQA)**

## **XIV. Utilities and Service Systems (CEQA)**

## **XV. Transportation and Traffic (CEQA)**

*[Community Expectations for DEIR:*

- 1. Assess safety of large trucks traversing neighborhood streets for blind spots, tight turns, brake failures on hills, heavy traffic; specify carrying capacity and dimensions (length, width, height, empty weight, loaded weight) of the trucks used in all traffic*

assessments.

2. *Assess impact from permanent traffic increase due to the proposed development.*
3. *Specifically assess multiple times throughout the day and early evening, with specific intent to include CSM class-change periods and regular morning and afternoon commuter rush hours (due to the increased parking on CSM western parking lots by businesses located on Clearview and the shuttle buses that now run throughout the day from those parking lots, onto CSM Drive, up to Hillsdale, and then down to Clearview and back again) at the following intersections:*
  - a. *– Hillsdale and 92;*
  - b. *– Hillsdale and Clearview;*
  - c. *– Hillsdale and CSM Drive;*
  - d. *– CSM Drive and Parrott;*
  - e. *– Parrott and Laurie;*
  - f. *– Laurie and Bel Aire;*
  - g. *– Bel Aire and the proposed exit from the development;*
  - h. *– Bel Aire and Ascension;*
  - i. *– Ascension and Polhemus;*
  - j. *– Polhemus and DeAnza*
4. *Assess safety impact from construction traffic and permanent traffic on Parrott roughly four to five homes north of the CSM/Parrott intersection (there is a “limited sightline” due to the rapid grade change on Parrott).*
5. *Construction activities will disrupt traffic on Bel Aire, especially CSM student traffic, with impacts on Enchanted way, Rainbow and Starlite, among others. Assessment of these areas must include this additional, displaced traffic when identifying problematic areas such as blind spots and dangerous curves.*
6. *Include a live demonstration of the proposed route for large trucks during construction through all neighborhood intersections from Highway 92 to and from the site. Monitor the speed of the trucks to make sure they will not be slowing down traffic going through the turns. Also have 2 trucks driving by each other in opposite direction to make sure that they can both safely maneuver the roads including turns and parked cars and all intersections, to include but not limited to Hillsdale and CSM Drive. Video this test and notify neighbors and CSM officials so that they can be present during the testing.*
7. *Determine the number of trucks that will need to exit the site to offload the excavated material. Describe the calculation, including truck size (must be the same size used for the demonstration in #6 as well as all traffic assessments), soil aeration estimate (e.g.,  $\frac{3}{4}$  cubic yard becomes 1 cubic yard when dumped into a truck), total excavation volume and total return-soil-to-site volume, specific hours per day truck traffic will drive onto and off the site during excavation and grading, Convert the number of trucks into “a truck will enter or leave the site every x minutes during the soil excavation phase”.*
8. *Describe where trucks will stand to await entry into the site; assess traffic impact and safety any such standing or slow moving trucks, including describing the temporarily narrowed road widths.*

9. *The exit route from the development entails traffic risks due to an elevation of Bel Aire north of the entrance to the subdivision resulting in a blind spot. A thorough traffic safety analysis must be completed providing acceptably safe solution during construction.*
10. *Traffic safety analysis must provide an acceptably safe solution for home owner traffic traversing this blind corner at the subdivision.*
11. *All street damage must be assessed before and after the majority of heavy truck traffic with cost of repairs for returning the surface back to its initial condition to be paid by developer.*
12. *Provide detailed assessments for the Reduced Density Alternative]*

**Attachments:** Transcript of EIR Scoping Session.10.09.13.pdf

Jerry,

Thanks for preparing these detailed comments. I will read through them and call you with any questions I might have. I have copied David Burruto of my office and District One Planning Commissioner Laurie Simonson so that they can review your comments as well

Also, in the event you do not already have it, attached is the transcript from the EIR scoping session held on October 8th.

Hi Jim and James,

We've included the Baywood Park HOA Scoping Comments. We look forward to translating the Community expectations into an effective DEIR.

Please acknowledge receipt of this email and attachment.

Thank you for all your efforts,

Jerry

**From:** Heather Hardy

**Subject:** Ascension Heights comments  
**Attachments:** CommunityCommScopeNov4Final\_1.docx

Good morning Commissioner Simonson,

I noticed that the email from Supervisor Dave Pine this morning didn't have the Baywood HOA comments attached, so they are included in this message.

Thanks,  
Heather

Heather Hardy | Executive Secretary, Planning and Building Department | County of San Mateo

## Baywood Park Homeowners Association Scoping Comments

Ascension Heights Subdivision  
November 4, 2013

### General Concerns

*[Community Expectations for DEIR:*

1. **Reduced Density Alternative (CEQA).** “.... The assessment of project alternatives will be consistent with this requirement by presenting a sufficient amount of detail necessary to afford decision makers with a reasoned choice.”  
**Statement Of Work—AES**

*There are critical impacts of this project that would be substantially reduced and possibly minimized to “less than significant” by adoption of the Reduced Density Alternative. The Decision Makers cannot be afforded a “reasoned choice” without quantitative impact comparisons between the Proposed Project and the Reduced Density Alternative. We have indicated the impacts most sensitive to Density comparisons, which are essential for achievement of a “reasoned choice”.*

2. *Define who will be responsible for maintaining common areas, Conservation Areas, and subdivision systems (e.g., swales, rainwater control, fugitive dust management, erosion) and who, or what entity, will assume legal liability due to any failures. Specify in the DEIR all Covenants, Conditions and Restrictions (CC&Rs) required for the project and incorporate those CC&Rs in all analyses.*
3. *Describe in one location in the DEIR all impacts on the current homeowners on Parrott Drive adjacent to the proposed development.*
4. *Subdivided, single-family homes to be built are not described. This subdivision is the discretionary permit that would allow a conforming single-family home to be built on each new parcel. The DEIR should analyze the effects of these houses. If the developer is not able to provide information or assumptions of the size and number of stories for these homes, the DEIR should assume the maximum size that could be built on the lots, using the zoning setbacks and 3-story home heights.*
5. *Project Phasing: The initial rough grading of the site has been stated to last about 45 days, followed by a 6-month period to construct the private street. It estimates home build-out to be an additional 5-10 years. Until home construction is completed and replanting and landscaping is complete and survives, the site will undergo erosion of exposed sand stone, excess surface water drainage, and dust pollution. Despite the excessively prolonged construction phase, a stable project site must be ensured by the DEIR.*
6. *Hours of the day for construction and truck traffic as well as days of the week activities must be specified.*
7. *Assess how the Parrott homes will be affected during the construction from dirt, debris, and rocks being pushed down the slope onto the Parrott homes, e.g., fences and backyards. Include what will be done to prevent and to fix and clean up these intrusions as they occur.*

8. *Assess the degree of light pollution shining onto neighboring homes from the site at night, and describe how onsite night-time lighting will be shielded from neighboring homes. The construction activities will persist for 5-10 years and impart yet another significant annoyance. Mitigation should be managed through consultation with impacted residents.*
9. *Formally notify CSM of project proposal.]*

## **I. Aesthetics (CEQA)**

**“Would the project:**

**Have a substantial adverse effect on a scenic vista?**

**Substantially degrade the existing visual character or quality of the site and its surroundings?” –CEQA**

*[Community Expectations for DEIR:*

1. *Assess impacts of proposed development on the vistas as seen from nearby homes on both sides of the streets (Parrott, Bel Aire, Ascension, CSM Drive), as well as character and quality of these surroundings.*
2. *Assess impacts of proposed development on the vistas as seen from further distances (e.g., from Polhemus, Bunker Hill), as well as character and quality of these surroundings.*
3. *Assess privacy intrusion on Parrott Drive homes and backyards both during construction and from the proposed development on an ongoing basis. Include the ongoing impact of car lights from the hammerhead turnarounds and the new road illuminating specific Parrott neighbors’ yards and houses. Include the impact of car traffic and car lights from the new road adjacent to the Parrott home shown as “lot 4” (has a pool in its backyard) on the proposed plans given that the new street appears to come within a couple feet of that Parrott home's backyard.*
4. *In addition, assess the privacy intrusion on Parrott Drive homes given the proximity and slope of the proposed properties.*
5. *Assess effectiveness of visual separation provided by newly planted trees (describing appropriate factors including required tree numbers, sizes (heights and spreads), maturity at planting, time to adequate maturity) (a) in the easement between Parrott homes and the development and (b) on the other boundaries of the development*
6. *Evaluate effectiveness of easement proposed by Developer between Parrott and the proposed development to provide visual privacy and noise reduction for residents in each set of homes. Describe easement width and landscaping plan for providing that visual privacy and noise reduction. Describe location for backyard fences for the Ascension Heights properties on their side of the easement.*
7. *Assess landscape maintenance plan for the trees and foliage within the easement*

*between Parrott and the proposed development, including the degree to which the width of the easement will be sufficient for healthy tree growth and maintenance.*

- 8. Evaluate the open space proposed by Developer, including the appropriateness of planned landscaping and re-grading and its contribution to the vistas in the area.*
- 9. Include in the assessment Story Poles, which are essential to adequately assess backyard intrusions due to increased elevation and slope of final graded surface as well as current heavy tree and bush growth, which obscures views.*
- 10. Provide detailed assessments for the Reduced Density Alternative]*

## **II. Agricultural Resources (CEQA)**

*[Community Expectations for DEIR:*

- 1. Evaluate “tree replacement” plan proposed by Developer, including numbers and species of trees removed versus numbers and species of trees planted, chance for healthy growth given the conditions on the hill, size (height and spread) and maturity of replacement trees, maintenance plan for continued tree health, and a multi-year plan and guarantee for tree health.*
- 2. Evaluate the ecological contribution of proposed Open Space, including the diversity and use of native plants.*
- 3. Incorporate the variable conditions on the hill (wind gusts, water, and soil health) on the likelihood of success of the landscape development plans, both during the multi-year build-out period and permanently.*
- 4. Propose a specific solution to ensure 5-10 year longevity for all plantings and estimate cost of the plan.]*

## **III. Air Quality and Greenhouse Gases (CEQA)**

*[Community Expectations for DEIR:*

- 1. Identify all specific classes of ‘sensitive receptors’ including fetuses— reference new study of birth defects secondary to 1<sup>st</sup> trimester exposures.*
- 2. Define assumptions, justifications and expertise used to build the most current URBEMIS model for predicting emission data (e.g., numbers of simultaneously operating equipment, age of diesel engines, type of fuel, exhaust catalyst, etc.) and detail peak and average TAC concentrations for each phase of construction. Include brake lining contaminants if trucks traverse down Laurie, Bel Aire, and Ascension.*
- 3. BAAQMD adopted “thresholds of significance” for air quality for Construction-related activities in 2012. Include these thresholds for evaluating the significance of the project’s air quality impacts.*
- 4. Assess effectiveness in reducing concentrations of PM10 and PM2.5 particles by using new, cleaner diesel fuel and new engines for both ‘off-road’ and ‘on-road’ usage.*
- 5. Include locally measured wind gusts from the site (measured at multiple times, and in particular late afternoons, during storms, and during seasonal transitional weather periods) in all air quality assessments.*

6. *Determine maximum site activity levels during “spare the air” days and any other conditions leading to unacceptably high TAC concentrations.*
7. *Assess effectiveness of CEQA phase 1 and 2 measures used to control fugitive dust.*
8. *Estimate dust volume deposited on houses and yards as function of distance from the construction site, off-site hauling routes and wind dispersion (possibly 40 – 50 mph).*
9. *Assess pollution impact (e.g., particulate matter, dust) from construction on nearby homes (Parrott Drive, CSM Drive, Bel Aire, and Ascension), as function of distance from the construction site, off-site hauling routes and wind dispersion). Include deposits specifically on solar energy panels (electricity and hot water), swimming pools, and outdoor plants.*
10. *Define necessary processes applicant will use to clean and remove dust from affected residences.*
11. *Since project is projected to last 5 -10 years, compute monthly fugitive dust for entire time hillside may be exposed due to non-planting of any area, estimated erosion rates for such areas, failure of plantings to survive the 10-year build-out, estimated erosion rates in those areas with failed plantings, and disruption of plants in Conservation Area.*
12. *Determine an effective, unbiased monitoring program for containment of all contaminants with power to halt operations when acceptable contaminant limits exceeded or other conditions warrant.*
13. *Include in the assessments impacts from trucks and equipment both on site and in use offsite (e.g., trucks that are idling on neighborhood streets awaiting entry onto the site).*
14. *Provide detailed, quantitative assessments for Air Quality Expectations 2,4,5,6,8 for the Reduced Density Alternative*
15. ***Conduct a comprehensive Health Risk Analysis.*** *Health risks of immediate, short-term (24 hours) exposure to air pollution are significant. The levels estimated in the 2009 Project of PM10 and PM2.5 emissions were sufficiently high to become a direct and immediate risk to the lives of people in the neighborhood and must be adequately evaluated and mitigated for the proposed plan as well as the Reduced Density Alternative. The preponderance of evidence demonstrating **immediate death, heart attack, stroke, asthma and COPD exacerbations increase immediately following short-term exposure (24 hours) of PM10 and PM2.5 contaminations.** This evidence has grown substantially with over 100 peer-reviewed, scientific studies demonstrating proximate (within 24-48hr) mortality and severe morbidities directly related to increased particle contamination, specifically PM10 and PM2.5. The adverse effects are cumulative and therefore proportional to both the concentration of contaminants and duration of exposure. The American Lung Association states (website, 2009): According to the findings from some of the latest studies, **short-term** increases in particle pollution have been linked to:*
  - i. *Death from respiratory and cardiovascular causes, including strokes,*<sup>21, 22, 23, 24</sup>
  - ii. *Increased mortality in infants and young children,*<sup>25</sup>

- iii. *Increased numbers of heart attacks, especially among the elderly and in people with heart conditions;<sup>26</sup>*
- iv. *Inflammation of lung tissue in young, healthy adults;<sup>27</sup>*
- v. *Increased hospitalization for cardiovascular disease, including strokes and congestive heart failure;<sup>28, 29, 30</sup>*
- vi. *Increased emergency room visits for patients suffering from acute respiratory ailments;<sup>31</sup>*
- vii. *Increased hospitalization for asthma among children; <sup>32, 33, 34</sup> and*
- viii. *Increased severity of asthma attacks in children.<sup>35</sup>]*

#### **IV. Biological Resources (CEQA)**

*[Community Expectations for DEIR:*

1. *The Mission Blue Butterfly question is key to determining the solution to the heavy, extensive erosion that has worsened substantially in the last six years since the 2007 assessment. A full assessment of the possible presence of the Butterfly does need be completed since the last assessment was indeterminate. The solution proposed in 2009 included no erosion remediation; thereby leaving the area “undisturbed and protected” is unacceptable.*
2. *If the new assessment does determine the probable presence of the Butterfly, acceptable erosion control methods must be explored and implemented as part of the mitigation. Appropriate planting might provide adequate erosion control without disturbing the Butterfly habitat.]*

#### **V. Cultural Resources (CEQA)**

#### **VI. Geology and Soils (CEQA)**

*[Community Expectations for DEIR:*

1. *The plan conveys many acres into a conservation area, which is steep and has experienced extensive, severe erosion and substantial slides above Bel Aire within the past two years. In 2009 and in subsequent discussions with the developer, there apparently is no intension to repair the erosion. This entire area will require a full assessment and recommendations for repairing and stabilizing the erosion by appropriate experts.*
2. *The time line for project completion is expected by the developer to be 5 – 10 years. Evaluate likelihood of increased and ongoing erosion during the build-out period. Erosion of lots and any unplanted areas awaiting construction completion will require assessment for mitigation solutions and continual monitoring of slope stability.*
3. *Many of the final lot slopes are very steep but don’t appear to be determined since the house layouts are not finalized and potentially may be modified by new house owners prior to building. Final, or maximum, slopes of appropriate steepness must be included in the project plans. Describe specific steepness for each proposed lot, and compare with County and City of San Mateo guidelines and current practices.*
4. *Assess impact of the grading proposal and multi-year “build out” period on soil*

*health on the hill. Include the “soil health” related credentials of the assessor.*

- 5. Present likely outcomes of the post-grading landscape plan (e.g., seed spraying) to stabilize the hill after grading and throughout years of the build-out period.*
- 6. Use updated analysis and information to assess hill stabilization, including specifically the new slide at the East end of Rainbow Drive on the location of a recently repaired major slide (~2003).*
- 7. Provide detailed assessments for the Reduced Density Alternative]*

## **VII. Hazards and Hazardous Materials (CEQA)**

## **VIII. Hydrology and Water Quality (CEQA)**

*[Community Expectations for DEIR:*

- 1. Assess after construction how the Parrott homes will be affected from debris, dirt, and water coming down the slope into their backyards during the initial grading phase, the build-out period, and on an ongoing basis.*
- 2. Use a 100-year storm model for all rainwater calculations given the numerous, recent large storms that have exceeded calculated 10 year maximums.*
- 3. Describe effectiveness of swales on equally steep hillsides and catchment areas in other developments.*
- 4. Assess potential for overflows from the swales onto Parrott Drive homes and down Bel Aire as a function of multiple rain falls over a short time time.*
- 5. Calculate the storm water flows down Bel Aire for capacity of curb containment and propensity for overflows at Ascension storm drain and contamination/damage to houses on Ascension and Valley View--include in calculations failures of Ascension storm drain due to debris accumulations.*
- 6. Multiple houses on Ascension and CSM Drives with property lines coincident with the project experience underground streams flowing under their houses often requiring sump pumps for water extraction. No assessments have been made to determine the location of these streams and the potential for disruption by the proposed construction. Assessments during the wet season prior to construction must be conducted and if flows increase after construction, necessary diversions constructed.*
- 7. Determine responsible party for maintenance of storm water system and legal responsibility for failures of the system.*
- 8. Provide detailed assessments for the Reduced Density Alternative]*

## **IX. Land Use and Planning (CEQA)**

## **X. Noise (CEQA)**

*[Community Expectations for DEIR:*

- 1. Assessments of peak sound levels at nearby, off-site homes must be calculated*

*with maximum and typical numbers of simultaneously operating engines (note that the noise levels produced by a single diesel engine exceeded thresholds and could not be mitigated according to the 2009 DEIR.). Assess the noise impacts during all phases of construction.*

- 2. Unacceptable sound levels must be defined with mitigation to include reducing the number of operating engines, improving mufflers, shutting off idling engines, etc.*
- 3. Assess truck haul noise levels along residential streets.*
- 4. Assess the noise impact from the trucks using compression braking if the route takes them down any steep slopes (e.g., Bel Aire to Ascension Drive).*
- 5. Sound levels must be continuously monitored by an independent service with the ability to halt activities as necessary.*
- 6. Provide detailed assessments for the Reduced Density Alternative.]*

## **XI. Population and Housing (CEQA)**

## **XII. Public Services (CEQA)**

*[Community Expectations for DEIR:*

- 1. The conservation areas apparently are to remain untouched by the developer. Eight to twelve foot brush is prevalent on the conservation areas. A fire assessment should be made of the potential for this very dry brush to cause a fire.*
- 2. The street layout includes two hammerhead turn-arounds and steep streets exceeding standard slopes that may impede access of fire trucks. The street layout needs to be re-assessed for fire safety.*
- 3. The entire subdivision has very limited off-street parking capacity, which will result in extensive on-street parking. Assess and describe access for fire trucks in the scenario of maximum used on-street parking from home owners and visitors; compare against current practices considered safe and normal within County and City of San Mateo.*
- 4. Describe the parking capacity for the proposed subdivision, to include on-street and off-street parking.*
- 5. Provide detailed assessments for the Reduced Density Alternative.]*

## **XIII. Recreation (CEQA)**

## **XIV. Utilities and Service Systems (CEQA)**

## **XV. Transportation and Traffic (CEQA)**

*[Community Expectations for DEIR:*

- 1. Assess safety of large trucks traversing neighborhood streets for blind spots, tight turns, brake failures on hills, heavy traffic; specify carrying capacity and dimensions (length, width, height, empty weight, loaded weight) of the trucks used in all traffic*

assessments.

2. *Assess impact from permanent traffic increase due to the proposed development.*
3. *Specifically assess multiple times throughout the day and early evening, with specific intent to include CSM class-change periods and regular morning and afternoon commuter rush hours (due to the increased parking on CSM western parking lots by businesses located on Clearview and the shuttle buses that now run throughout the day from those parking lots, onto CSM Drive, up to Hillsdale, and then down to Clearview and back again) at the following intersections:*
  - a. *– Hillsdale and 92;*
  - b. *– Hillsdale and Clearview;*
  - c. *– Hillsdale and CSM Drive;*
  - d. *– CSM Drive and Parrott;*
  - e. *– Parrott and Laurie;*
  - f. *– Laurie and Bel Aire;*
  - g. *– Bel Aire and the proposed exit from the development;*
  - h. *– Bel Aire and Ascension;*
  - i. *– Ascension and Polhemus;*
  - j. *– Polhemus and DeAnza*
4. *Assess safety impact from construction traffic and permanent traffic on Parrott roughly four to five homes north of the CSM/Parrott intersection (there is a “limited sightline” due to the rapid grade change on Parrott).*
5. *Construction activities will disrupt traffic on Bel Aire, especially CSM student traffic, with impacts on Enchanted way, Rainbow and Starlite, among others. Assessment of these areas must include this additional, displaced traffic when identifying problematic areas such as blind spots and dangerous curves.*
6. *Include a live demonstration of the proposed route for large trucks during construction through all neighborhood intersections from Highway 92 to and from the site. Monitor the speed of the trucks to make sure they will not be slowing down traffic going through the turns. Also have 2 trucks driving by each other in opposite direction to make sure that they can both safely maneuver the roads including turns and parked cars and all intersections, to include but not limited to Hillsdale and CSM Drive. Video this test and notify neighbors and CSM officials so that they can be present during the testing.*
7. *Determine the number of trucks that will need to exit the site to offload the excavated material. Describe the calculation, including truck size (must be the same size used for the demonstration in #6 as well as all traffic assessments), soil aeration estimate (e.g.,  $\frac{3}{4}$  cubic yard becomes 1 cubic yard when dumped into a truck), total excavation volume and total return-soil-to-site volume, specific hours per day truck traffic will drive onto and off the site during excavation and grading, Convert the number of trucks into “a truck will enter or leave the site every x minutes during the soil excavation phase”.*
8. *Describe where trucks will stand to await entry into the site; assess traffic impact and safety any such standing or slow moving trucks, including describing the temporarily narrowed road widths.*

9. *The exit route from the development entails traffic risks due to an elevation of Bel Aire north of the entrance to the subdivision resulting in a blind spot. A thorough traffic safety analysis must be completed providing acceptably safe solution during construction.*
10. *Traffic safety analysis must provide an acceptably safe solution for home owner traffic traversing this blind corner at the subdivision.*
11. *All street damage must be assessed before and after the majority of heavy truck traffic with cost of repairs for returning the surface back to its initial condition to be paid by developer.*
12. *Provide detailed assessments for the Reduced Density Alternative]*

Redwood City, CA 94063

RE: Public Comments due November 4, 2013 for Ascension Heights proposal

Dear Mr. Castenada,

We are residents of 1538 Parrott Drive, and live in a home that abuts directly against the proposed development.

1. As a general statement, we believe the county decision making process would benefit from more comprehensive analyses of the various issues (rather than less comprehensive analysis). Given the steepness of the hillside and the various issues identified during the last DEIR process (culminating in the 2009 denial of the DEIR), we recommend that the DEIR process and resultant report err on the side of more data and more analysis rather than less.

2. We request that mitigations be described and mandated for any issues that are identified.

- This would be in contrast to last time (2009), when the DEIR stated for numerous issues that impacts, particularly but not limited to Parrott Drive neighbors adjacent to the site, were "... determined to be significant but unavoidable" and that several were not sufficiently mitigable to reduce impacts below recommended levels. We believe that mitigations may be put in place for nearly any issue or impact, and look forward to the process this time describing and mandating appropriate mitigations that would result in reducing the impact below recommended levels.
- Additionally, we request that mitigations be described with words like "must" rather than "should" or "could". The former (use of "must") defines prescribed mitigations upon which current residents in the neighborhood can depend, while the latter (use of "could") implies that the developer may do what he would like rather than follow through on the mitigation.

3. We request that Reduced Density Alternatives be created and considered thoughtfully. In meetings dating back to ~2008, the developer has repeatedly said that he has no interest in building anything less than ~25 homes on the site (now reduced to 19 homes in his latest proposal given the rejection of his previous proposal in 2009), and that he does not consider any Reduced Density Alternatives as feasible or of

interest to him. That said, the process leading the DEIR must include appropriate Reduced Density Alternatives for the County to consider thoughtfully.

4. Currently, the water tank on top of the hill has a large outlet pipe that runs straight down the hill to Parrott Drive, along an easement between 1538 Parrott (our home) and 1526 Parrott. The development plans for the propose to re-route this pipe between our property and the water tank, inserting four 90-degree turns into the pipe, and running within a few feet of our property line. We have two specific concerns about this planned re-routing of this water pipe.

- First, as context, we have three very large trees in our backyard adjacent to the property line. The diameters for these trees are ~47 inches, ~49 inches, and ~80 inches when measured ~two feet above ground level. Note that the trees spread out in trunk dimension, and so measuring diameters at the more typical "five feet above ground level" would significantly increase the measured diameters.
- We request that the plan be changed to comply with International Arborist standards which strongly recommends avoiding digging in the tree root zone that extends "1 to 1-1/2 feet away from the tree per inch of tree diameter". Given the 47-inch diameter of our smallest tree, the nearest edge of the excavation for the water pipe, or any development digging for that matter, would be 47 feet from that tree. Using the larger "1-1/2 feet per inch" recommendation, excavation should be no closer than 71 feet from this tree.
- Second, we are concerned about the possible impact from the proposed change in pipe design from a straight pipe which allows any water discharge to flow unencumbered through the pipe to the proposed design which incorporates four sharp turns (90 degrees). The increased pressure generated by these angles will lead to faster erosion inside the pipes. We are concerned and request a comparative analysis of the lifespan of the proposed design versus it's current design.

5. As mentioned above, we have three, very large and old trees. Arborists and original neighbors report the trees as being of, at least, 60, possibly 75, years old. As with most plants, over 70% of root activity occurs within the top few inches of soil. This is where the water, air and nutrition are primarily processed. *Architectural Graphic Standards* contains research by James Urban who determined that the critical factor in determining long-term tree health is the volume of root-supporting soil available. (Also mentioned in *Sustainable Landscape Construction* by J. William Thompson and Kim Sorvig.) The rule of thumb for area that must be untouched (to preserve tree health) is one and one-half times the area of the drip line. The International Arborist Society which certifies US arborists uses the guideline mentioned above in comment #1, bullet #2. By untouched, the guidelines specify no parking, storing materials, or changing the grade. Even 6 inches of additional soil against the trunk can cause disease and removing the top soil

will disproportionately hurt the trees' ability to thrive. Given these professional guidelines, **it is impossible to insure healthy mature trees and put housing or roads as close as they are proposed.**

While most of the proposed trees are not of the width as ours, it is essential that the same guidelines be used for those remaining trees as well.

6. The Developer has stated that all grading for the hill will be done at once and at the beginning of construction. We are very concerned about the potential for erosion and other damage if various precautions are not taken, including ones to conserve the health of the topsoil. The top soil is where growth happens. It also contains its own active ecology which is crucial for plant development. Ideally, the top soil should be removed and saved before grading the subsoil. Soils scientist, teacher at Harvard's School of Design and author of Urban Soils, Phil Craul, makes the following suggestions for keeping the soil as alive and healthy as possible – make several small piles, not one large; depth of piles should be no more than 4 feet for clay soils; keep the piles moderately damp; protect the soil from wind and water erosion by covering or planting; and handle the soil as little as possible. Caltrans has found that reapplication of the top soil works to improve the growth of post construction plantings. (Claasen, V.P. And R.J. Zaoski, "The Effect of Top Soil Reapplications on Vegetation Re-establishment", California Dept. Of Transportation, 1994.

We request that the same precautions be taken on any development on the hill.

7. The hammerhead turn-around points directly into our back yard and windows, specifically 2 of our children's bedrooms. Both of these could be mitigated, though that might require the developer to drop at least 1-2 lots.

8. The separation between the new development and Parrott homes (in 2002 CT referred to a ~25-foot gap between two separate fences, which is the bare minimum we wanted, along with mature trees in that separation) is vague and the developer is sending very mixed messages now. As one example, his plans don't show the trees or the gap between fences or even declare an easement the length of the development next to Parrott, but his artistic renderings from 2+ years ago show very mature pine trees in between "them" and "us". The "skinniest" pine trees I could find on the internet still have a branch spread of ~10-feet in radius, which means 20-feet in diameter, which requires more space than he is now showing; and most pine trees are broader than that. We request a definitive plan drawn and an analysis of the ability of any easement or buffer zone to effectively grow healthy trees, given visual and sound privacy, and not drop leaf/needle debris in an amount that would hurt plantings pools and other elements in the Parrott back yards.

9. Given the steep slope of the project and several areas of erosion, we are concerned that a qualified team of landscape architect, soils scientist and native horticulturalist have not been engaged to advise on the best choices for planting in the development. Some sample drawings have should lush grass on open spaces and standard street trees. This is an unlikely and expensive landscape with little chance for success and reminds us of the developer's ignorance of the site.

10. We request that AES survey the site and surrounding area at various times after rainfalls. Residents continue to manage foundation shifts and add drainage piping to their properties. Our yard regularly flooded until we added drainage trenches in three places, plus a catchment on our patio. Our outgoing sewage pipe was bent due to shift soil and our neighbors are currently going through the same process of having to replace the sewage outpipe.

11. Regarding the traffic on Parrott, between CSM and Laurie Drives, Laurel has personally seen 3 accidents where cars left the road and landed in yards. The third accident actually hit the house. In addition, we have lost 2 side mirrors on cars that were parked legally on the street. Finally, a student on the way to CSM claims she was blinded by the sunlight and rear-ended our minivan which was legally parked on the street. The insurance declared the car "totalled." Traffic speeds by regularly and safety is threatened. An analysis and recommendations for improved safety needs to be taken.

12. We have solar panels which provide for all of our annual electric needs. We request compensation for any dust or other blockages that prevent our panels from working to full capacity.

Thank you for your attention,  
Laurel and Donald Nagle

Hi Trent,

On the topic of billing, I just want to make sure we're still ok on labor and the remaining funds. With the last invoice (Dec 2013), we have \$18,688 remaining. I've been asked to check and see if the remaining still covers the rest of the work (through the Final EIR), best estimate. When you get a chance, let me know so I can report back on my end. Thanks.

Thank you for your email and concerns Ms Simms. Ill make sure that the Planning Commission receives this letter, as they will be the decision makers for this subdivision and take the community's feedback, as well as staff's findings and environmental review, under consideration in their decision.

Regards,  
 James

>>> On 1/20/2015 at 23:23, Suzanne Simms < wrote:

Hello,

I live at 1879 Los Altos Drive and I have questions for you regarding the continuously proposed development of Ascention Hts. or Watertank Hill. Over the past few years, I have attended multiple meetings, along with hundreds of my neighbors to express concern and dismay at the attempt to build on a piece of property that not only clearly looks like it is eroding rapidly, but is surrounded by 3 recent landslides-the current Rainbow Drive, the former Los Altos Drive, and the huge Polhemus road slide. I am not sure why we are talking about the same issues again and again? I have read portions of the EIR and am amazed at the methods that the county would find acceptable to mitigate some very real and severe issues that will arise with any building on that hill. This entire proposal and process continues to beg the question...WHY???

Specifically, does it make sense to grade a hillside, causing 470% greater air pollution to a thriving neighborhood composed of your constituents that are elderly or have young families, during a time when almost every day is a Spare the Air day? How can a neighbor be fined over \$100 if they burn a wood fire one night, yet a developer can be allowed to increase air pollution by 470% above normal without any consequences over a two year+ timeframe? Are there different standards for different parties in regards to the Bay Area Air Quality Board and it's regulations? Is this development the right thing for our neighborhood, our county, your constituents, and why?

Additionally, it is my understanding that this developer would be allowed to build on slopes as steep as 40 degrees or more for a substantial number of the proposed homes. Why? Where is the logic and who is the structural engineer that would take financial responsibility for any slides on those hillsides? My neighborhood was forced to pay \$6,000 per household (approx. 130 households in total or approx. \$780,000) to the San Mateo Oaks HOA in 1996, in order to analyze and build a huge retaining wall to fix the slope that slipped between homes on Parrott and Los

Altos Drive. Thankfully, no one was killed, despite the soil slipping within feet of the home. My neighbor, who tried to act responsibly before he purchased his home, hired a soils engineer before he moved in to assess his hillside. Despite being told everything was good, he had a slide occur years after he moved in. He paid thousands of dollars out of his own pocket to fix his slide and within a few months, the retaining wall had to be re-engineered and rebuilt because it failed.

How will 19 home owners be able to pay for fixing multiple or even one potentially large landslide that **will** occur someday in the future? They will not be able to afford the cost! Why should any homeowner be put through this? Is any development on known, unstable land smart? How will the county label the land--SE for scenic easement or U for unstable and unuseable? Is it good for our county and your constituents? If so, why?

Last, how is it legal (and if it is legal, how is it moral) to establish a Home Owners Association for the real purpose of shifting liability for unstable land from the developer (and the county who authorizes it) to future homeowners? Why is the strategy allowable to saddle unsuspecting homeowners with a substantial future liability? In dry years, people forget about landslide issues.

In our case, years before we moved in, the neighborhood had "disbanded" the HOA. They didn't see the point of paying dues--there were no tennis courts, pool, or playgrounds to maintain and all seemed well. Our RE agent and sellers told us that there was no HOA anymore and to disregard it. Six months later, we were receiving notices that we needed to pay dues for the current year and back dues for years past. We sued our sellers and both agents, as no one disclosed the landslides that occurred years earlier. We won our legal battle, but it doesn't make up for the wasted energy, money, and stress to fight it. Sadly, we are fighting the battle for those 19 future homeowners. Why does the county believe that homeowners are best suited to maintain drainage ditches and retaining walls? It is not the norm in other cities. In the Hallmark subdivision in Belmont, I believe the city maintains all water and drainage issues. Why? It is my understanding that the developer would be allowed to pass the landslide liability and maintenance for retaining walls, drainage, and eventually 5 underground water tanks to the 19 homeowners.

Why would they be assumed to handle this responsibility over decades? If they do not, it will negatively impact everyone around them. Why would this be acceptable to anyone? I believe that if potential home owners fully understood what buying a home on that hillside entailed, no one in their right mind would purchase a home. Again, WHY???

James, David, and Carol, if you could please email me back how you see this development benefiting anyone for the long term, I would really appreciate your efforts. I can see no other benefit, than money in the form of future property taxes for the county and, of course, revenue for the developer. In that case, all liability and costs should also rest with the developer and county.

A real portion of that money should be kept in a fund for future landslides, flooding, sewer systems that are already at capacity and schools that are also at capacity. It seems unconscionable to do anything else.

Respectfully,

[Suzanne Simms](#)

Attached is the civil plans. I think between this, the landscaping plan, and the most recent bio report (whihc I think you all have now), I think you guys can start moving forward.

Do you have time tomorrow to do a quick phone call to sync up and go over timelines? Let me know.

James

Thanks.

On the fun side of management, in February you had asked about invoicing and billing. Looks like we have a few outstanding invoices, any idea when these will be paid.

**RE: Cost Estimate for Continued CEQA Compliance Services**

---

In accordance with the *Agreement Between the County of San Mateo and Analytical Environmental Services* dated May 7<sup>th</sup>, 2013 (Agreement), AES completed an Environmental Impact Report (EIR) for the Ascensions Heights Subdivision Project (County File number PLN2002-0517) and attended the Planning Commission Hearing on January 28, 2015 for the potential approval of the EIR and other project-related planning considerations. Due to the length of time spend on public comment, the hearing was adjourned and set to reconvene on February 25, 2015. Although outside of contracted services, AES Senior Project Manager attended the reconvened Planning Commission Hearing on February 25<sup>th</sup>, 2015; however, no final decision on the EIR or Applicant's requests was made. Based on the Commissioners' comments at the February 25<sup>th</sup> Hearing, AES understands the Applicant has made minor changes to the project and that there now exists an opportunity to address some of the Commissioners' comments in the Final EIR since the document has yet to be certified.

The County has requested AES present a budget to revise the Final EIR (and subsequent revised Draft EIR contained there within) based on comment received from the Planning Commission (subsequently several of the comments are driven by those presented by the General Public), attend additional public meetings, and provide compensation for meetings attended outside of contracted services

**ADDITIONAL CEQA COMPLIANCE SERVICES**

1. Air Quality-AES will revise the discussion of the Health Risk Assessment results to address commenters' concerns regarding the results presented in the discussion in the Draft and Final EIR for a not to exceed time and materials cost of **\$1,500**.
2. Aesthetics –AES will revise the aesthetics portion to include additional design details provided by the applicant for a not to exceed time and materials cost of **\$1,500**.
3. Traffic-AES will revise the discussion of construction traffic to clarify the assumptions utilized in determining the number of construction vehicle trips to address commenters concerns regarding traffic safety. This task will be completed for a not to exceed time and materials cost of **\$1,250**.
4. Biology-AES will add to the discussion of the history of site surveys conducted on the site as well as include results from recent surveys to address commenters' concerns regarding impacts to biological species presented in the discussion in the Draft and Final EIR. AES will also expand upon the reasoning for the mitigation to clarify that mitigation is not being deferred. These tasks will be completed for a not to exceed time and materials cost of **\$1,250**.

5. Public Services, School Impacts-AES will revise the discussion of impacts to schools emphasizing that the payment of impact fees mitigates the projects impacts in accordance with State law to address commenters' concerns that the significance statement in the discussion of impacts to schools in the Draft and Final EIR relied on a failed proposition. This task will be completed for a not to exceed time and materials cost of **\$900**.
6. Environmentally Superior Alternative-AES will revise the discussion of the Environmentally Superior Alternative in accordance with comments provided by the Planning Commission for a not to exceed time and materials cost of **\$640**.
7. AES will prepare a Revised Final EIR and submit to the State Clearinghouse to follow the distribution cycle conducted on the previous Final EIR for a not to exceed time and materials cost of **\$1,960**.
8. AES will attend two Planning Commission hearing at a time and place to be determined for a not to exceed time and materials cost of **\$4,000**.
9. AES will attend a Board of Supervisors meeting at a time and place to be determined for a not to exceed time and materials cost of **\$2,000**.

#### **COST ESTIMATE**

AES will complete the above mentioned services for a cost not-to-exceed **\$15,000** on a time and materials basis.

#### Assumptions

- The applicant will not alter the site plan in such a manner that would result in a new significant impact that wasn't identified in the Final EIR or increase the severity of a significant impact identified in the Final EIR.
- An attendance requirement of four (4) hours is anticipated for each event.
- Each meeting will be attended by the Senior Project Manager. Additional staff can attend if requested at an additional cost.
- The County will provide AES with a determination of the tasks above to be implemented and AES will provide a final cost estimate based on the selection of tasks.

**Subject:** Re: Christopher Joseph Associates

I have worked with CAJA now on two projects. The main person I have worked with is Geoff Reilly at CAJA . I like Geoff and his approach to EIRs. He can talk technical and also at a level for others to understand. One thing I like about Geoff is that he doesn't always bring up the "money" issue about if something (an eir issue) seems to be needing more explanation or exploration. He is more interested in a really good product. On the Edgewood Estates project, Sara Bortolussi and I (with Mary Raftery) worked very well with them on the Admin. draft and mitigation measures. Their mitigation measures were reasonable and could be implemented. There were a few items we discussed in greater detail, he investigated and came up with workable solutions. As for Ascension Heights, that is still in prelim. mode (honestly, I don't know the status of the alt. design Dennis Thomas was working out. I saw a prelim., but I think it still needed some more modifications before CAJA could proceed), so we haven't seen an Admin. Draft (at least not that I am aware of).

Another notable item is that Geoff is always prepared. He does his homework and knows the issues. How did he/they do in the interview identifying the key top three issues? Just curious. He seems to always be right on target.

Given the nature of this project (big wave) and the length of time we and they will be working on this project, they will be a good team to work with in the long haul. I think this will be Geoff's first time working in the Coastal Zone, unless he has or is working on anything for Half Moon Bay, Pacifica, or other points north (since Geoff's office is in the way north bay area). I think he can handle it.

I copied Mary R. on my response. Maybe you might want to contact here for her thoughts too.

Hope this helps.

jke

>>> Lisa Aozasa 10/12/2006 2:17 PM >>>

Hi Guys - Lisa G. and I are trying to pin down which EIR consultant to go with for the Big Wave project, and "CAJA" is one of two we're considering. Can you let us know your thoughts about them, based on your experiences on the Edgewood Estates and Ascension Dr. subdivisions? Any input you may have about their ability to handle complex biological issues, in particular, would be helpful. But really, we'd like to hear any thoughts/concerns/issues you may have. We're trying to decide by tomorrow or Monday at the latest, so the sooner the better. Thanks! Lisa A.

Hi Lisa,

An old subdivision application that was assigned to Matt and put on hold is becoming active again, as described in the message below. Would you like us to pass it on to current planning, or keep Matt on it?  
Steve

>>> Matthew Seubert 1/17/2008 2:37 PM >>>  
Steve,

Here is the info. for the Thomas subdivision. Mr. Thomas resubmitted a revised set of drawings today. The next step would be to prepare a revised contract amendment for the EIR consultant and take it to the BOS for approval, then have them begin the revised EIR.

Project description: EIR, Grading Permit & Major Subdivision to subdivide 13.25 acre parcel into 25 residential lots. Improvements to include new public roads (including emergency fire exit road), storm drains, new sanitary sewer & realign water main; 'tot lot' & conservation area. Includes street naming for 'Ascension Heights Drive' and removal of 4 significant eucalyptus trees.

Applicant: Dennis Thomas

Location: Ascension Drive, Highlands

Case #: PLN2002-00517

## MEMORANDUM

**To:** *Matthew Seubert*  
*San Mateo County, Planning and Building Department*

**From:** *Jennie Anderson*

**Date:** *July 1, 2008*

**Subject:** *Ascension Heights Subdivision Project ADEIR#2 Update*  
*Topics for Discussion & Status Report*

---

### Topics for Discussion

As you know, the ADEIR#1 was ultimately put on hold in 2004/2005 due to issues related to emergency access. In 2006, a meeting was held with the applicant, County representatives, and CAJA regarding a revised site plan that might be used in the EIR as an alternative to the proposed project. Based on these issues and comments received by the County on the project and the 2004 ADEIR#1, the Vesting Tentative Map (VTM; County stamped January 17, 2008) was updated. This included: (1) the addition of an Emergency Vehicle Access (EVA) road; (2) a boundary outlining a proposed undisturbed and protected area; (3) the reclassification of the on-site circulation road from a public road to a private road; and (4) other minor shifts in proposed on-site utilities, drainage facilities, and lot layout specifics.

**I am trying to determine which VTM version to utilize for our updated Project Description ADEIR#2 analyses.** Are all of these additional features in the January 17<sup>th</sup> VTM associated with the proposed Alternative analysis, or is it just the inclusion of the EVA road? Based on a review of the revised VTM, it seems the details we provided in the 2004 Project Description may not be accurate (i.e., utilities specs, average lot sizing/setbacks, etc.). We are in the process of updating the Project Description and related figures to reflect current changes, but would like to receive your (or the Applicants) feedback on the data we are currently utilizing. I can provide a Draft updated Project Description for your review and confirmation if this would be helpful for discussion, as this also identifies any questions or data holes we may have.

The abovementioned VTM modifications seem to have affected the proposed grading volume, the potential hydrological impacts (i.e., associated with the additional surface area from the proposed EVA road), the biological impacts (i.e., additional trees lost, conservation areas re-designated to the EVA road), the development footprint (i.e., trail locations, etc.), and reduced impacts associated with on-site road maintenance now that the circulation road is private.

As stated previously, the projects EVA issue was to be addressed through the inclusion of an updated Alternative that identified the EVA road on-site. However, based on a closer look at the proposed project and revised VTM, several issues may be raised regarding this analysis. **That being said, I have included below for your consideration and discussion, three different scenarios that could be utilized to address these updates and EVA concerns:**

1. Proceed with original Project Description (i.e., no EVA road), and per County/Fire Department identify a significant impact for emergency access and provide mitigation measures for an EVA road. However, as this

mitigation measure has the potential to raise new significant issues (e.g., GEO, AES) it must be analyzed in addition to the impact. Per Section 15126.4(a)(1)(D) of the CEQA Guidelines, “if a mitigation measure would cause one or more significant effects in addition to those that would be caused by the project as proposed, the effects of the mitigation measure shall be discussed but in less detail than the significant effects of the project as proposed.” No EVA road Alternative would be included, as a comparative analysis to the proposed project, as the Alternative analyses assume that all applicable mitigation measures proposed for the project would apply.

2. Per the original Contract Amendment #1 discussion, proceed with including the EVA road and other revised VTM changes in the EIR Alternative analysis (i.e., EVA Road Alternative). For the reasons outlined above, various impacts associated with the revised VTM and EVA road would be greater under this alternative. Albeit, some impacts would be slightly reduced (i.e., Road Maintenance, some BIO). Alternatives do not include a detailed quantitative analysis of impacts, so we do run the risk of public controversy and CEQA defensibility for adequately analyzing the impacts associated with the inclusion of an EVA road (e.g., extensive grading and associated AQ impacts, additional visual impacts from off-site residents, hydrology, biological impacts, and feasibility of design due to steep slopes) as an alternative. Other alternatives provided in the EIR result in reduced impacts and address the EVA issue. On a side note, this could affect the applicants proposed density.

Per Section 15126.6(a),(b),(d) of the CEQA Guidelines:

“(a)..An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project, but would avoid or substantially lessen any of the significant effects of the project..

(b)..Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.

(d)..If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the project as proposed..”

3. Include the revised VTM and EVA road in the updated Project Description for the updated ADEIR#2 analysis. This would eliminate the need for an additional Alternative, EVA significant impacts, and any associated mitigation. Therefore, the impact analyses associated with this potentially controversial project would be addressed up front.

**Regardless of which scenario is implemented, for our impact analysis and CEQA defensibility, we do request that the applicant supplement the existing Hydrology and Geotech reports to include an analysis of the impacts associated with the proposed EVA road.** This may result in a brief peer review by our EIR Geologist, which was not

included in our approved Contract Amendment #1. We feel this is necessary now, as we need to address any potentially significant impacts associated with the road, regardless of which scenario we utilize, for example:

- Scenario #1: Per CEQA, we would need to address potentially significant impacts associated with EVA road mitigation measure;
- Scenario #2: Per CEQA, we would need to address potentially significant impacts associated with the alternative; and
- Scenario #3: Per CEQA, we would update the existing appropriate section analyses to assess the associated EVA road impacts (i.e., GEO, HYDRO – also AQ, AES, BIO, etc.).

**My recommendation would be for the applicant to supplement the existing Hydrology and Geotech reports and to implement Scenario #3 for ultimate CEQA defensibility and ease of presentation for the public/agencies.** I would like to also speak with you regarding the above topics, as well as our current submittal date of July 11<sup>th</sup> in light of the above items. I have provided a summarized brief update on the status of the ADEIR#2 below.

#### ADEIR#2 Update

**ADEIR#1:** Comments received on the 2004 ADEIR#1 and during the NOP/Scoping Meeting process are being confirmed that they have been adequately addressed (if applicable) in the ADEIR#2.

**Environmental Setting/Project Description:** This section has been combined with the Project Description under the ADEIR#2 update effort. Applicable figures, where necessary, are in the process of being updated.

**Related Projects List:** The Related Projects list has been updated, based on discussions with the City of San Mateo, the Town of Hillsborough, and the County, as well as review of various planning documents. The cumulative analysis under each issue area is in the process of being updated.

**Regulatory Setting:** The Regulatory Setting discussion is in the process of being updated for each applicable section.

**Air Quality:** Due to recent staffing backlog in this Department, the Air Quality analysis for the greenhouse gases (GHG) discussion will begin to be updated as of July 7<sup>th</sup>. However, this may need to be supplemented based on the discussion provided under the above “Topics for Discussion”.

**Biological Resources:** A site reconnaissance survey has been conducted by our biologist. Additionally, all database search results and species tables have been updated. The section is in the process of being updated.

**Hydrology & Water Quality:** The EIR hydrologist (*Schaaf & Wheeler*) is in the process of reviewing the hydrological report; however, this may need to be supplemented based on the discussion provided under the above “Topics for Discussion”. This section will be updated accordingly based on the outcome.

**Population & Housing:** Unless there is a specific reason the County required this section to be discussed in detail in the EIR, based on our additional research this issue should have been scoped out during the Initial Study process. We are proposing to remove the detailed section analysis and move the discussion to the General Impact Categories section (under Impacts Found to Be Less Than Significant), with data provided to support this conclusion.

**Public Services and Utilities & Service Systems:** Updated Service Letters have been sent to applicable agencies for relevant Public Services & Utilities section updates. Due to a lack of available staff at various agencies we have been promised responses no later than July 14<sup>th</sup>. The sections will be updated accordingly upon receipt, with placeholders if necessary. The original ADEIR#1 analysis of Public Services and Utilities & Service Systems was found to be inadequate in level of detail, so in order to ensure defensibility we are updating accordingly.

**Transportation/Traffic:** The EIR traffic engineer (*Hexagon*) has updated the traffic counts and is in the process of briefly reconfirming that no additional analysis will be necessary based on the related project list update. This section is in the process of being updated and will be supplemented accordingly based on the results of the related projects, if necessary. This was not included in our original Contract Amendment #1scope; however, we still need to confirm that it will not be a necessary step.

**General Impact Categories:** The Impacts Found to Be Less Than Significant discussion is in the process of being supplemented, including a strengthening of the Initial Study analysis for items scoped out of EIR discussion (e.g., Cultural Resources data, etc.).

**Alternatives:** Pending above results regarding EVA road.

Thank you in advance for your review and consideration of this memorandum. I would like to discuss its contents at your earliest convenience. Please do feel free to contact me at P: 707-676-1902 or E: [jennie.anderson@cajaeir.com](mailto:jennie.anderson@cajaeir.com) to set up a time to talk.

Sincerely,

Jennie Anderson  
Project Manager

Jim,  
Before I offer Jennie Anderson of Christopher Joseph and Associates some times to hold a meeting with us next week, is there anyone else I need to include in this meeting as to check their availability? Please let me know so I can take those into consideration in providing Jennie some options. Thanks.

JAMES

Mr. Byron Easton  
Associate Environmental Planner  
Christopher A. Joseph & Associates  
179 H Street  
Petaluma, CA 94952

Dear Mr. Easton:

**Re: Proposed Ascension Heights Subdivision Environmental Impact Report (EIR) Solid Waste & Sewer Service**

We are in receipt of your letter dated July 25, 2008, regarding the above project. We have listed below your questions (Q) and our responses (R) to your questions.

### SOLID WASTE SERVICES

- Q1. Solid waste services for the proposed project area are provided by Allied Waste Industries, Inc. The primary disposal site is the Ox Mountain Sanitary Landfill. This site had an original capacity of 12 million cubic yards, and has a remaining capacity of 33.5 million cubic yards, due to various expansion projects. Ox Mountain receives an average of 3,250 tons of waste per day with a maximum of 3,598 yards per day. Can you please verify this data is accurate?
- R1. According to Ox Mountain's Solid Waste Facility Permit, the design capacity for disposal is 37.9 million cubic yards. The amount of permitted tons per Operating day is 3,598 tons/day. The average tonnage Ox Mountain receives per day varies, depending upon when the average was taken. For 2008, Ox Mountain averages well below 3,250 tons of waste per day.
- Q2. Would waste go to a transfer station before going to the landfill?
- R2. Franchised waste will be brought to the transfer station. Self-haul from garages and yard cleanups can be brought to the landfill or a Transfer Station.
- Q3. Would the transfer station/landfill have enough capacity to accommodate the project's generation of solid waste?
- R3. The impact will be minimal. We cannot determine disposal impacts until we can calculate how many households and how many persons per household.
- Q3a. If not, what would be needed to accommodate the project's generation of solid waste?
- R3a. Ensuring there will be adequate space on each parcel for recycling.
- Q4. What recycling programs are available for the residents of the proposed project?

**Re: Proposed Ascension Heights Subdivision Environmental Impact Report (EIR)  
Solid Waste & Sewer Service**

September 17, 2008

Page 2

- R4. Curbside recycling; Cans, Bottles, Paper, Cardboard and Yard Waste.
- Q4a. How much diversion of solid waste does the recycling program average?  
R4a. The County is required per AB939 to divert at least 50% of its waste from going to the landfill. The County Unincorporated diversion rate is approximately 64% as submitted for 2006. This diversion has not yet been approved by the California Integrated Waste Management Board.
- Q4b. What is the percentage of reduction from the landfill that is created by the recycling program?  
R4b. We do not measure the percentage of reduction from recycling, we measure diversion from the landfill. Recycling is not the only method to divert waste; there are other methods such as BackYard Composting, Green Building, Reuse, Source Reduction.
- Q5. A diversion plan will be implemented for all construction debris generated by the proposed project. The plan will follow technical guidelines provided by your Waste Management Section. Are there any suggestions for mitigation of potential construction related impacts to solid waste services?  
R5. Encourage Source Separation of materials onsite into various categories to ensure construction debris gets recycled. The County has a Construction and Demolition Guide that lists the various providers of C & D recycling such as cardboard, wire, metal, wood, all inerts etc. The project should also require all the jobsite subcontractors to recycle.
- Q6. Has San Mateo County implemented single stream recycling? If not, is there any plan in the reasonably foreseeable future to do so?  
R6. No, but it is planned to be implemented in certain area of the County by January 1, 2011.
- Q7. "Per CIWMB facility/site details for Ox Mountain Landfill remaining capacity is listed at 44,646,148 cubic yards with a maximum permitted capacity of xx. Furthermore, no violations or areas of concern have been noted during site inspections. Maximum permitted disposal at the landfill is 3,598 tons per day (tpd); therefore, an additional 0.03 tons per day would represent a minimal incremental increase in solid waste generation."  
R7. Per CIWMB facility/site details for Ox Mountain Landfill remaining capacity is listed at 44,646,148 cubic yards with a maximum permitted capacity of 37,900,000.
- Q8. AB 939 (California Public Resources Code Section 40000 *et seq*) requires at least 50% of the solid waste stream to be diverted from landfills by the year 2000. Are there additional measures that can be taken to minimize potentially significant impacts to solid waste services that may be generated by the proposed project?  
R8. The project can implement aggressive programs to divert most if not all of the waste generated from the landfill from construction activities.
- Q9. What steps or programs does San Mateo County implement with respect to California Integrated Waste Management Act of 1989 (AB 939) that may involve the project?  
R9. We have staff available to provide technical assistance and a website at <http://www.RecycleWorks.org> to provide additional resources.

**Re: Proposed Ascension Heights Subdivision Environmental Impact Report (EIR)  
Solid Waste & Sewer Service**

September 17, 2008

Page 3

- Q10. In addition to addressing project-specific impacts to solid waste service, the EIR will also address cumulative impacts to solid waste service. We are in the process of compiling a list of reasonably foreseeable development in the County. Table 1, Related Projects List includes a list of some of the other major, reasonably foreseeable approved development in the County in proximity to the proposed project's location (refer to Figure 3, Location of Related Projects). However, additional projects will likely be added to the list as our research continues. Can the landfill accommodate the demand for landfill capacity associated with these projects in conjunction with the proposed project?
- R10. See R3.
- Q10a. How does your agency address the growing demand for landfill capacity?  
R10a. Encouraging new programs and policies to divert waste from the landfill.
- Q10b. Do you have any projections for future demand based on projected growth in the region?  
R10b. RecycleWorks does not track this data. This item is most likely addressed in the County General Plan. The County produced both a Siting Element and the San Mateo County Integrated Waste Management Plan. Every five years the County works with City County Association of Governments (C/CAG) to update the documents. These documents include some discussion on future planning.
- Q10c. What would be needed to meet the cumulative demand for landfill capacity?  
R10c. Siting or expanding landfill capacity, encouraging zero waste and many other diversion programs.
- Q11. Please provide any recommendations that could reduce the demand for landfill capacity created by the proposed project and cumulative development.  
R11. Comply with the County Waste Management Plan. Design garbage and recycling enclosures/locations for adequate space and access in mind. Incorporate the Build It Green checklist into the design to encourage the use of recyclable and sustainable materials. Encourage the homeowners association to encourage reuse by holding annual garage sales. Contact the local hauler to make sure the width and turns of the designed road is adequate for turning, maneuvering and the weight of the trucks to ensure serviceability.

## **SEWER SERVICES**

- Q1. Please describe the sizes and capacities of existing sewer lines that would serve the project site and the surrounding area. If possible, please include a map illustrating your description.  
R1. The size of the existing sewer lines in the project site area is 6" in diameter. Downstream sewer lines have larger diameters. Attached is a map indicating the Crystal Springs County Sanitation District (District) service area and the existing sewer lines surrounding the project site. The District relies on the Town of Hillsborough and the City of San Mateo (City) for the transport of sewage emanating from the District, and on the City's wastewater treatment plant for treatment of the sewage.

**Re: Proposed Ascension Heights Subdivision Environmental Impact Report (EIR)  
Solid Waste & Sewer Service**

September 17, 2008

Page 4

- Q2. Where is the wastewater treatment plant located that will serve the proposed project?  
R2. The wastewater treatment plant, which is owned and operated by the City, is located at 2050 Detroit Drive in San Mateo.
- Q3. Where does this plant discharge?  
R3. The plant discharges into the San Francisco Bay. Specific information regarding the wastewater treatment plant and discharge should be directed to the City.
- Q4. What is the NPDES permit number that regulates discharge from this plant?  
R4. As stated in R2, the City owns and operates the treatment plant and should be contacted to obtain the NPDES permit number. The City's phone number is (650) 522-7300.
- Q5. What is the design capacity for the wastewater treatment plant serving the proposed project?  
R5. The City should be contacted for this information.
- Q6. Are there any existing sewer service problems/deficiencies in the project area?  
R6. There are no known sewer service problems or deficiencies in the immediate project area; however, the District has identified through a Master Sewer Plan approximately \$2.3 Million in capital improvement projects within the District.
- There are capacity issues in the sewer lines downstream of the project area within the Town of Hillsborough and the City of San Mateo during wet weather events. Both downstream jurisdictions are evaluating projects to reduce wet weather sewer overflows. Based on the District's agreement with both downstream agencies, a portion of the costs associated with future projects will be paid by the District. The District currently has a \$1 Million loan from the County General Fund for a past capital improvement project completed by the Town of Hillsborough. The District also owes the City for their proportionate share of the current wastewater treatment plant project estimated at \$1.3 Million.
- Q6a. If sewer service problems/deficiencies exist, how would they affect the project?  
R6a. The additional flows from the subdivision will exacerbate the downstream capacity problems unless the wet weather issues are resolved.
- Q6b. What measures could the project incorporate to minimize the affect these sewer service problems/deficiencies on the project and surrounding uses?  
R6b. The project could minimize its impact on the downstream systems by completing capital improvement projects within the District that would reduce inflow and infiltration in an amount equal to the projected sewage discharge amount to the District from the project. This type of mitigation would mitigate the project's affect on downstream pipes by reducing or eliminating wet weather inflow and infiltration from the District to downstream of the project.

**Re: Proposed Ascension Heights Subdivision Environmental Impact Report (EIR)  
Solid Waste & Sewer Service**

September 17, 2008

Page 5

- Q7. "Currently, the SMWTP discharges an average daily flow of 13.8 mgd and has capacity to treat 15.7 mgd. This translates into a remaining capacity of 1.9 mgd at average daily flows that can be treated at the SMWTP." *Please verify this information is correct.*
- R7. The City should be contacted to verify this information.
- Q8. "The San Mateo Wastewater Treatment Plant has sufficient capacity to accommodate sewage generated by the proposed project." *Please verify this information is correct.*
- R8. The City should be contacted to verify this information.
- Q9. Will connection of the proposed project create any temporary interruption of service to existing customers? If the project will disrupt service, can you give us an estimate of how long the interruption would last?
- R9. The District will not allow interruption of service to existing customers. Sewer lines affected by the project may require by-pass pumping during construction.
- Q10. Is recycled water within the project area, or that could serve the project site?
- R10. There is no recycled water within the project area.
- Q11. What sewage generation rates does the Department of Public Works use?
- R11. The San Mateo County Department of Public Works in its capacity of administering the Crystal Springs County Sanitation District uses the sewage generation rate of 220 gallons per day per equivalent residential unit.
- Q12. In addition to addressing project-specific impacts to sewer service, the EIR will also address cumulative impacts to sewer service. We are in the process of compiling a list of reasonably foreseeable development in the County. Table 1, Related Projects List includes a list of some of the other major, reasonably foreseeable approved development in the County in proximity to the proposed project's location (refer to Figure 3, Location of Related Projects). However, additional projects will likely be added to the list as our research continues. Can the District accommodate the demand for sewer services associated with these projects in conjunction with the project?
- R12. There are two (2) other projects listed in Table 1 that are within the District boundary. Project No. 1 is a San Francisco Public Utilities Commission water pipeline improvement project, which does not affect sewer service demand. All other projects, except for Project No. 4, are located in the City and do not affect the District's sewer service demand. Project No. 4 will receive similar comments related to capacity and downstream sewer impacts as the project being contemplated.
- Q12a. How does your agency address the growing demand for sewer services?
- R12a. The District is predominantly built-out and does not experience a growing demand for sewer service.

The District has a Sewer Master Plan prepared by Brown and Caldwell in 1999, which evaluated the District's sewer system using hydraulic modeling. The District upgraded a portion of the Polhemus Road trunk line in 2003 as it was identified in the master plan as being hydraulically deficient to meet peak wet weather flow conditions. The project replaced the existing

Mr. Byron Easton, Associate Environmental Planner  
Christopher A. Joseph & Associates

**Re: Proposed Ascension Heights Subdivision Environmental Impact Report (EIR)  
Solid Waste & Sewer Service**

September 17, 2008

Page 6

10" vitrified clay pipes with 12" to 15" plastic pipes. A copy of the master plan can be obtained on our website at [www.co.sanmateo.ca.us/sewers](http://www.co.sanmateo.ca.us/sewers)

As mentioned above in R6 there are additional projects that the District has proposed, which are based on the Master Plan. The remaining projects were identified based on structural deficiencies and maintenance efforts.

Q12b. Do you have any projections for future demand based on projected growth in the region?

R12b. We do not have any projections for future demand based on projected growth in the District.

Q12c. What would be needed to meet the cumulative demand for sewer services capacity?

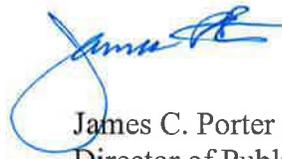

R12c. The developer of the proposed subdivision must demonstrate that the District sewer mains utilized to transport sewage from the subdivision has the peak wet weather capacity for conveying the additional flow to be generated by the 25 residences. If it's determined that the lines are insufficient to convey additional flow, the developer may need to upgrade the sewer lines to accommodate this subdivision. This study and work will not, however, resolve the downstream capacity issues. As mentioned in R6b, a project to reduce inflow and infiltration in the District could offset any increase in sewage produced by the proposed subdivision.

Q13. Do you have any recommendations that would avoid or mitigate significant impacts on the existing system?

R13. See R6b and R12c.

If you have any other questions, please contact Lillian Clark at (650) 599-1447 regarding solid waste services, and Ann Stillman at (650) 599-1417 regarding sewer services.

Very truly yours,

James C. Porter

**Subject:** RE: EIR for your review

Dear Jim & Jay:

here are my comments about the Ascension Heights EIR:

- they need to define the physical relationship between the sandstone and the greenstone (i.e. who's on top? nature of the contact?)
- colluvium reported to be up to 5 feet deep in old swales but this doesn't seem to bother them.
- regarding the cross-sections....where is the greenstone? And they should show bedding orientation in the sandstone (diagrammatically at least) on the sections.
- serious gully erosion present. Drainage is going to be a serious problem, during and after grading and construction. Erosion hazard, too. But the report skims over these problems.
- project has huge amount of grading, and will result in very steep slopes. Potential for lots of erosion.
- the bedding is described as having a shallow dip to the NE, which makes the north and northeast slopes dipslopes, with the potential for slope stability problems. It is odd that they say (page 7: landslides) that this slope has the lowest susceptibility for failure.
- the text says there is little hazard from deep-seated landslides, but the hazard analysis (page 18) says there are weak zones below (?) the sandstone that could result in deep failure.
- with all the grading planned, it is hard to imagine that there will still be a potential for debris flow failures, unless areas of colluvium, deep soils, or unengineered fill will remain on the site.
- I agree that landslide hazards on this site are significant, but their justification for saying so seems to be at odds with information in the early part of the report. This whole hazard analysis section reads like it was written by a different person (who didn't read the first part of the report).
- why does the EIR contain engineering recommendations? (page 19) This reads like it was culled right out of the Michelucchi report.

I've got a mess o' graduate students coming in 15 minutes, so I'll stop now.  
Call me if you have questions.

**Subject:** RE: Ascension Follow-up  
**Attachments:** 2. Ascension Subdivision Report 08122008.pdf

Jim,

I just wanted to run a couple of things by you. CAJA has expressed concerns over Fire's issue with the proposed 20% grade of the EVA road. Fire recommended a maximum 15% grade, which will not be possible given the terrain. CAJA was seeking our thoughts on the matter, and before I responded, I wanted to get your take on this. Given that provisions exist to allow exceptions of up to 20% in the design standards, I feel it would be acceptable. Although, this is obviously contrary to fire's recommendations, so I'm not sure how we want to have that reflected.

A second point is the photo simulations. Mr. Thomas has expressed no interest in pursuing updated photo sims and insists that the computer model is sufficient. With that, I'll start working with CAJA proceed with what we have sans updated sims. I will warn Mr. Thomas that while we can attempt to move forward with the EIR without updated sims, this may come up again as we near a public hearing. I have to assume that the public, as well as the PC, will hold his subdivision to the same standard as Highlands Estates with their sims. Let me know if you have any further thoughts on this matter. Thanks Jim.

JAMES

Hi James,

I wanted to follow-up with you on the scheduling for the Ascension EIR, as per the Draft schedule we are to submit a PDF copy of the Screencheck DEIR (SDEIR) today for County review and approval as the Draft EIR (DEIR). At this point we are still continuing to update the SDEIR, based on the County's comments, including working with our Geologist for GEO section updates. If possible, I would also like to include all of the outstanding items that we are waiting on from the Applicant or County in our SDEIR analysis (i.e., SIMS, HYDRO, LAFCO, graphic edits, etc.), so that the document is accurate and updated appropriately. Having a complete SDEIR is an important component of the EIR process, as this will (once approved by County for appropriate comment incorporation) be the used as the DEIR template for public circulation. Please let me know your thoughts on

submittal deadlines and outstanding data. We could submit piecemeal sections that are “completed”; however, the outstanding data could have a ripple effect throughout the document.

## **Questions/Comments**

**(1)** On a side note, regarding the CALFIRE concerns about percent street grade, I am concerned that the requested overall 15% road grade may not be possible. Per the 2008 Hexagon Report (see attached) for street grades: “*Street Grades*

*The Site plan shows a maximum grade of 20%. According to San Mateo County standards, the typical maximum grade is 15% with up to 20% allowed by design exception. Thus, the proposed grades are acceptable by design exception. Given the terrain of the site, it would not be possible to reduce the grades to 15%.”*

*I can talk to our Geologist and Traffic Engineer regarding the CALFIRE concerns, but wanted to get your take on the above conflict.*

**(2)** *Do you have a copy of the January 15, 2004 M&A GEO Report: “Response to Third Party Review of Ascension Heights Subdivision, San Mateo County, California”? We do not have this in our files unfortunately and I would like to include in the DEIR appendices.*

*Thanks for your help,  
Jennie*

**To:** Jennie Anderson  
**Subject:** RE: Ascension Follow-up

*Jennie,*

*I apologies for getting some of the responses piecemeal, but I wanted to send a few things as I'm off tomorrow. Here are a couple of things I have for you, and items we're waiting on and/or need to get:*

1. On page III-39, the address for the CALFIRE station 17 should be 320 Paul Scannell Drive, San Mateo,

CA.

2. The school mentioned at 201 Polhemus Road on page IV.H-18 is The Odyssey School, a charter school that current operates under a Use Permit to operated within the RM zoning district. The school is limited to 45 students, and can not exceed that without amending their Use Permit.

Waiting on:

1. I'm waiting to hear back from Martha Poyatos, our LAFCo staff member, in regards to the portions of the ADEIR that mention LAFCo (pages III-35 and III-40). I do know that on page IV.F-14, Martha's comments was to suggest adding the following: "The LAFCo annexation process is subject to discretionary action by the Board of Supervisors to adopt property tax exchange resolution to transfer property tax from general county property tax to the affected county-governed special district." I'm thinking her comments on the others are along the same lines. As soon as I hear back from her, Ill pass that along.

2. I'm waiting to hear back from Long Range planning to determine if the CAP is consistent with the General Plan. Ill send them follow up email this afternoon.

3. Our public works staff member should be confirming the mitigation measures PS-2 for us shortly. Ill send his comments/corrections as soon as I get them.

Im trying to draft up a letter to email Mr. Thomas regarding some the updated items we need, as well as the situation with the AES simulations. As those comes in, Ill pass those along as well.

I did want to mention that Pete Munoa, Fire Marshall with CALFIRE, indicated during his review of the ADEIR he noticed that it did not incorporate his recommendations and requirements based on his response dated September 20, 2008. I just wanted to check in to see if that was received. If not, I can get you a copy of that. Just let me know when you have a chance.

JAMES

Thanks James for the update. No problem at all, I was just trying to move forward with the updated schedule; however, I am aware that we may be a bit behind pending the receipt and possible preparation of SIMs and peer review of Applicant HYDRO data, etc.

To answer your question, the SIM updates were not included in the executed Contract Amendment #1 (CA #1). Based on a conversation with Matt S. in July 2008 (see attached memo) we decided that due to

*the controversial nature of the project that we would have to analyze the environmental impacts associated with the EVA road (and other project updates from 2003 VTM; i.e., drainage, etc.) as part of the PD and not solely as an alternative. This differed from the CA #1. Therefore, additional SIMs and GEO, HYDRO section updates (among others) surfaced as we moved forward during PD/EIR analysis and in response to various comments received, etc. from County. To date we have been utilizing the existing CA #1 budget for the associated work, but are running low on budget and are unable to cover the additional associated costs for SIMs, etc.*

*Please let me know if you have additional questions.*

*Best,  
Jennie*

**Subject:** Re: Ascension Follow-up

*Jennie,*

*Ill try to have some of the material for tomorrow. I apologize for not getting back to your earlier, as I've been attending a maditory work shop and putting out other various fires around here. After meeting with Lisa Grote, she agrees we should convince Mr Thomas of the benefits of updating the simulations. Before having that discussion with him, I was going to also provide him with the laundry list of items we need to fill in the gaps with the EIR which I should have done in the morning. Just so I'm clear (because I know he's going to ask), the updated simulations were NOT part of the Board approved contract as a minor oversight, correct? Let me know if I misunderstood that.*

*A quick note in regards to my comments: in reviewing Jim's redlines, he pretty much hit everything I had, which were mostly typo and what was discussed via our conference call .*

*Again, Ill get you what I needed to follow up with you hopefully by tomorrow (Thursday) afternoon, and confirm with you the items we need from Dennis Thomas.*

*JAMES*

Hello,

Thank you Jim for sending over your ADEIR #2 comments via Fed-Ex, which I have been incorporating into the Screencheck DEIR (SDEIR). Per our Thursday, October 30<sup>th</sup> conference call, I wanted to follow-up on a couple of items that you mentioned the County would be providing and/or verifying. Please see list below and let me know if you have any updates or associated questions. Additionally, I will send you an electronic copy of the SSU Cultural Records search done for the site shortly.

1. **GEO:** County to send copy of response from M&A for incorporation into SDEIR.
2. **LAFCO:** County to provide additional comments from Jean D.(?) regarding LAFCO comments.
3. **HYDRO:** County to contact Applicant team for 100-year calculations; and HMP associated modeling (i.e., BAHM data).
4. **AES:** County to confirm with Applicant team authorization for update of AES Simulations to reflect EVA. Estimate for update, include:
  - Approximately \$5,000 total for 4 simulation updates (equates to modification of existing files and approximately 35-40 hrs of CAJA labor). This total is based on the availability of the Applicant CAD files utilized for the EVA Road Elevations (refer to example Figure III-16 in the DEIR).
5. **Related Projects:** Per County, would like to provide additional updates to Related Projects List based on PW projects. This may have a ripple effect on cumulative impacts and other issue area analyses.
6. **James C.** to provide additional comments (if applicable) on ADEIR #2.
7. **Figure III-14 data:** County to contact Applicant team for updated Street Cross Sections data (to reflect proper width, labeling).
8. **AQ:** County to confirm Page IV.B-16 Cumulative Impacts text in order to see if General Plan is consistent with CAP.
9. **Project Description:** County to confirm CALFIRE Station 17 location.
10. **Public Services:** County to confirm Page IV.H-13 (Mitigation Measure PS-2) data referencing stats for hammerhead.

Thanks in advance for any information you can provide. Those items that may require additional turnaround time on behalf of CAJA include the underlined HYDRO and AES requests, which may impact the scheduled SDEIR submittal date of November 12<sup>th</sup>. However, per our conversation, it is important to ensure that we have the most current and applicable data presented in the public DEIR due to the controversial nature of this project.

FYI: I will be out of the office tomorrow hosting an AEP CEQA Workshop, returning to the office on Thursday. I will have limited email access, but will try to respond as quickly as possible to any correspondence.

>>> James Castaneda 11/13/2008 4:36 PM >>>

Jim,

I just wanted to run a couple of things by you. CAJA has expressed concerns over Fire's issue with the proposed 20% grade of the EVA road. Fire recommended a maximum 15% grade, which will not be possible given the terrain. CAJA was seeking our thoughts on the matter, and before I responded, I wanted to get your take on this. Given that provisions exist to allow exceptions of up to 20% in the design standards, I feel it would be acceptable. Although, this is obviously contrary to fire's recommendations, so I'm not sure how we want to have that reflected.

A second point is the photo simulations. Mr. Thomas has expressed no interest in pursuing updated photo sims and insists that the computer model is sufficient. With that, I'll start working with CAJA proceed with what we have sans updated sims. I will warn Mr. Thomas that while we can attempt to move forward with the EIR without updated sims, this may come up again as we near a public hearing. I have to assume that the public, as well as the PC, will hold his subdivision to the same standard as Highlands Estates with their sims. Let me know if you have any further thoughts on this matter. Thanks Jim.

JAMES

Hi James,

I wanted to follow-up with you on the scheduling for the Ascension EIR, as per the Draft schedule we are to submit a PDF copy of the Screencheck DEIR (SDEIR) today for County review and approval as the Draft EIR (DEIR). At this point we are still continuing to update the SDEIR, based on the County's comments, including working with our Geologist for GEO section updates. If possible, I would also like to include all of the outstanding items that we are waiting on from the Applicant or County in our SDEIR analysis (i.e., SIMS, HYDRO, LAFCO, graphic edits, etc.), so that the document is accurate and updated appropriately. Having a complete SDEIR is an important component of the EIR process, as this will (once approved by County for appropriate comment incorporation) be the used as the DEIR template for public circulation. Please let me know your thoughts on submittal deadlines and outstanding data. We could submit piecemeal sections that are "completed"; however, the outstanding data could have a ripple effect throughout the document.

## Questions/Comments

(1) On a side note, regarding the CALFIRE concerns about percent street grade, I am concerned that the requested overall 15% road grade may not be possible. Per the 2008 Hexagon Report (see attached) for street grades: "Street Grades

*The Site plan shows a maximum grade of 20%. According to San Mateo County standards, the typical maximum grade is 15% with up to 20% allowed by design exception. Thus, the proposed grades are acceptable by design exception. Given the terrain of the site, it would not be possible to reduce the grades to 15%."*

*I can talk to our Geologist and Traffic Engineer regarding the CALFIRE concerns, but wanted to get your take on the above conflict.*

(2) Do you have a copy of the January 15, 2004 M&A GEO Report: "Response to Third Party Review of Ascension Heights Subdivision, San Mateo County, California"? We do not have this in our files unfortunately and I would like to include in the DEIR appendices.

Thanks for your help,

Pete,

I was wondering if you had a free moment to talk with either Jim Eggemeyer and/or myself regarding the emergency access road proposed for the Ascension Heights subdivision. The EIR consultants have acknowledged Cal-Fire's recommendation for the road not to exceed a 15% grade, which potentially could be an issue due to engineering and topography constrains preventing a grade no less that 20%. Please let me know when we might take a few minutes of your time to discuss as to get this issue ironed out before publication of the document. Thanks Pete.

# 1. Introduction

---

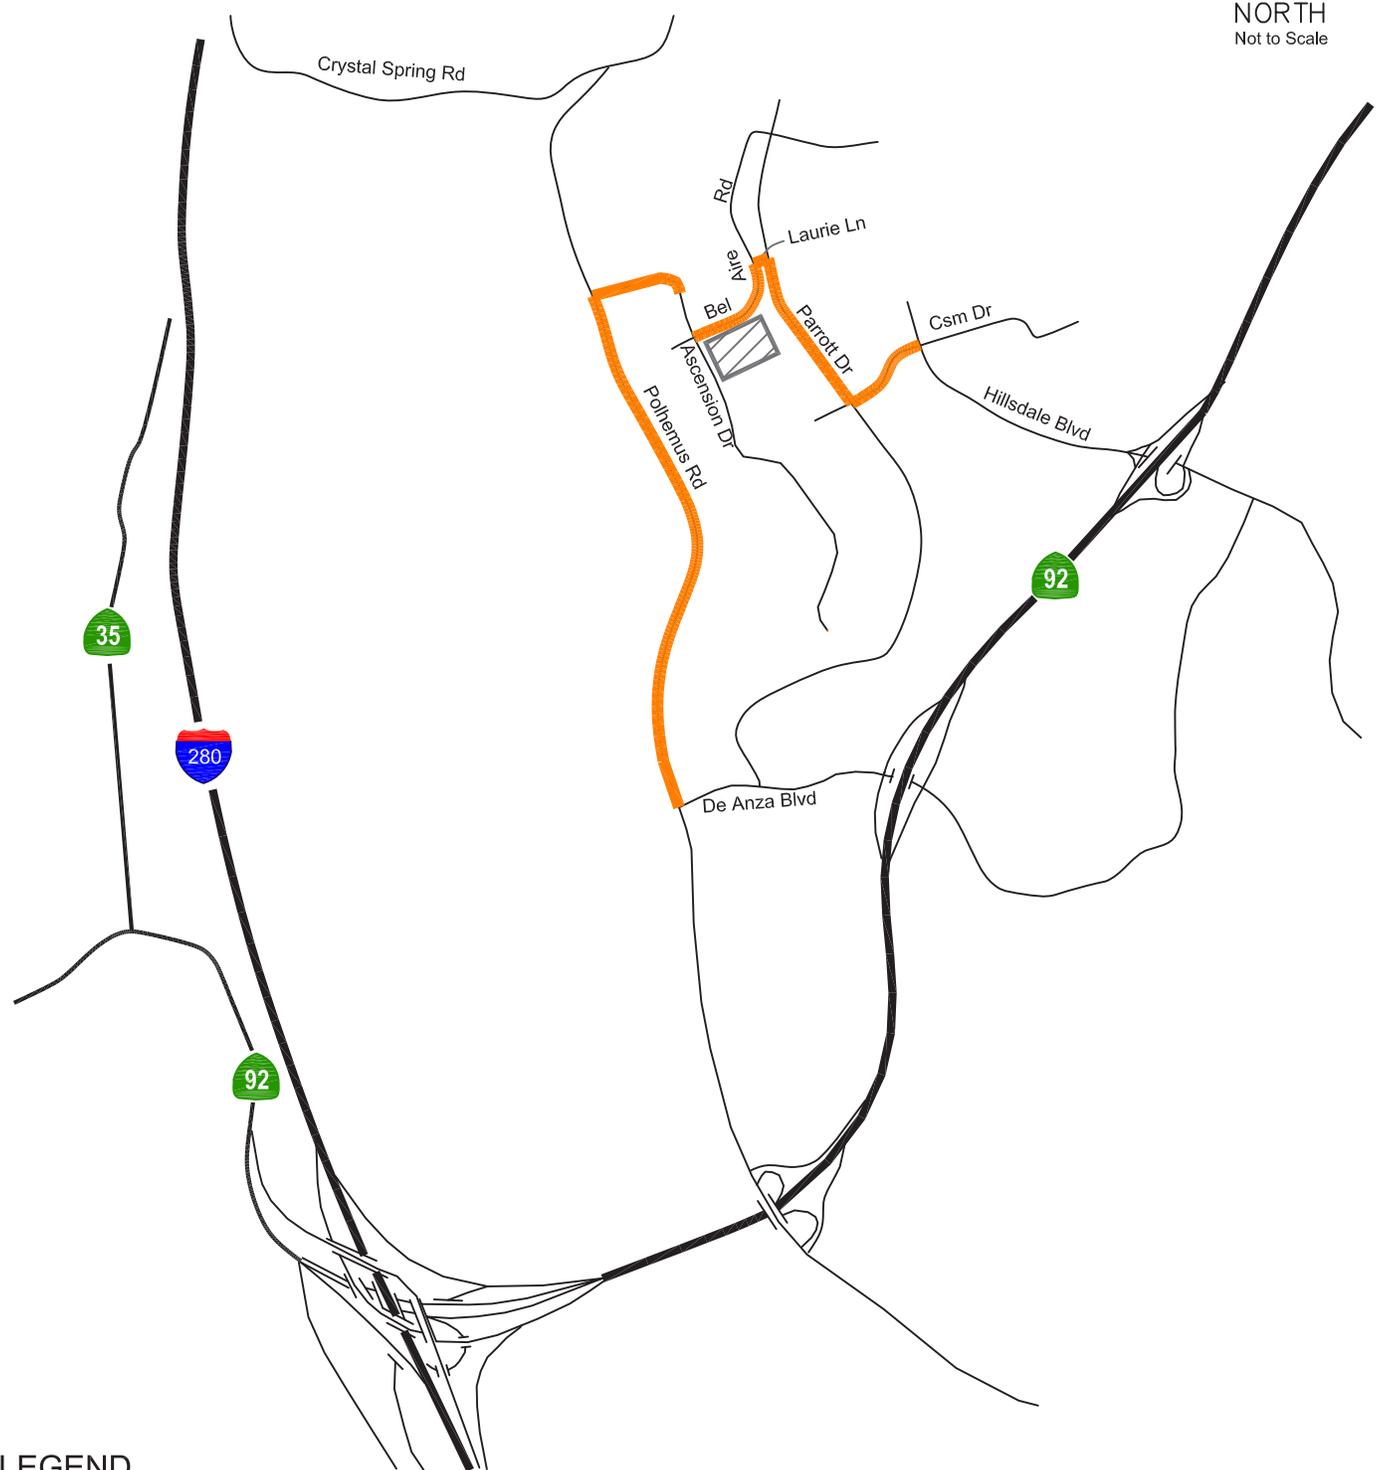

This report presents the results of the traffic impact analysis conducted for the Ascension Subdivision residential development in San Mateo County, California. The project site is located at the northeast corner of Bel Aire Road and Ascension Drive in the San Mateo Highlands, an unincorporated area in San Mateo County. The project consists of development of six parcels totaling 13.3 acres to construct 25 new single-family-detached residential dwelling units. The site is currently vacant. Parking will be provided on site at the individual residences and in designated areas on the street system on site. Access to the site is provided via Bel Aire Road. The project site location and the surrounding study area are shown on Figure 1.

## Scope of Study

This study was conducted for the purpose of identifying the potential traffic impacts related to the proposed development. The impacts of the project were evaluated following the standards and methodologies set forth by San Mateo County. Since the project would add less than 100 peak hour trips to regional roads, no analysis under the Congestion Management Program (CMP) of the City/County Association of Governments (C/CAG) is required. The traffic analysis is based on 24-hour daily traffic volumes and project trips on the study roadway segments. The study roadway segments are identified below.

## Study Roadway Segments

Polhemus Road  
Ascension Drive  
Bel Aire Road  
Laurie Lane  
Parrott Drive  
CSM Drive

**LEGEND**

 = Site

Figure 1

**SITE LOCATION AND STUDY ROADWAY SEGMENTS**

 Hexagon  
 Transportation Consultants, Inc.

Ascension Subdivision - Residential Development

These are the roadways that would be most affected by project traffic. Traffic conditions on the roadway segments were analyzed for 24-hours and for the weekday AM and PM peak hours of traffic. The AM peak hour of traffic is generally between 7:00 and 9:00 AM, and the PM peak hour is typically between 4:00 and 6:00 PM. It is during these periods that the most congested traffic conditions occur on an average day.

## Analysis Scenarios

Traffic conditions were evaluated for the following scenarios:

- *Existing Conditions*                      Year 2008
- *Background Conditions*                Existing traffic plus traffic added by approved development
- *Project Conditions*                        Background Conditions plus the proposed project
- *Cumulative Conditions*                 Cumulative conditions *with/without* the project

The data required for the analysis were obtained from new traffic counts, previous traffic studies, and the C/CAG Travel Demand Forecasting Model.

## Analysis Methodologies and Level of Service Standards

Roadway segments are analyzed by comparing the volume to capacity ratios. Typical capacity is about 20,000 vehicles per day on two-lane arterials and collectors and 2,000 vehicles per day on a residential street.

For the purposes of evaluating impacts related to the TIRE index, if (1) the roadway average daily traffic (ADT) with the project is greater than the roadway capacity AND (2) the TIRE index increases by 0.1 or more, then the project has a significant impact on the roadway.

### **TIRE Index**

Traffic conditions also were evaluated using the TIRE index (Traffic Infusion in Residential Environments). The TIRE index is a numerical representation of a resident’s perception of the effect of street traffic on activities such as walking, cycling and playing, and on daily tasks such as maneuvering an auto out of a residential driveway. The acronym for “Traffic Infusion on Residential Environments,” TIRE, is expressed by index values that range from zero, representing the least effect of traffic, to five representing the most severe effect:

According to the TIRE index, a given change in traffic volume will cause a greater impact on a residential environment with a low pre-existing volume than it would on a street with a higher pre-existing volume. Any traffic change that would cause an index change of 0.1 or more would be noticeable to street residents. Streets with TIRE levels above the midrange index of 3 are traffic-dominated, while those with indexes below 3 are better suited for residential activities (See Appendix B).

### ***On-Site Circulation***

Any feature of the site layout that might result in unsafe pedestrian or vehicular circulation would be considered a significant impact. Revisions to the site plan also may be recommended to make the site circulation function more efficiently. Any on-site circulation recommendations that are not related to safety are not considered significant impacts under the California Environmental Quality Act (CEQA) but may be required as a condition of approval.

## 2. Existing Conditions

---

The project site is located at the northeast corner of Bel Aire Road and Ascension Drive in the San Mateo Highlands, an unincorporated area in San Mateo County. The project consists of development of six parcels totaling 13.3 acres to construct 25 new single-family-detached residential dwelling units. The site is currently vacant. Parking will be provided on site at the individual residences and in designated areas on the street system on site. Access to the site is provided via Bel Aire Road.

### Site Access and Surrounding Roadway Network

Regional access to the project site is provided via State Route (SR) 92.

*SR 92* is a four-lane east-west freeway in the vicinity of the site. SR 92 extends from Half Moon Bay in west San Mateo County to Hayward in Alameda County. Access to the project site is provided by its interchanges at Polhemus Road, De Anza Boulevard, and Hillsdale Boulevard.

Local access to the site is provided by Polhemus Road, Ascension Drive, Bel Aire Road, De Anza Boulevard, Parrott Drive, Laurie Lane, West Hillsdale Boulevard, and Csm Drive. These roadways and other local streets are described below.

*Polhemus Road* is a two-lane north-south arterial. Polhemus Road begins north of SR-92 and terminates at Crystal Springs, south of SR-92 it becomes Ralston Avenue. Access to the site is provided via Ascension Drive.

*Ascension Drive* is a two-lane east-west residential street with sidewalks; it begins east of Polhemus Road and terminates at Los Altos Drive. Access to the site is provided via Bel Aire Road.

*Bel Aire Road* is a two-lane local residential street with sidewalks and on-street parking on one side of the street. The project would have direct access to Bel Aire Road via a new subdivision street.

*De Anza Boulevard* is a two-lane east west collector with sidewalks, it begins east of Polhemus Road and continues over SR-92 and terminates at West Hillsdale Boulevard. Access to site is provided via Parrott Drive and Polhemus Road.

*Parrott Drive* is a two-lane north-south collector street with sidewalks, it begins north of De Anza Boulevard and continues across Laurie Lane. Access to the site is provided via Laurie Lane.

*Laurie Lane* is a short two-lane east-west local residential street with sidewalks. It begins at Bel Aire Road and terminates at Parrott Drive.

*West Hillsdale Boulevard* in the vicinity of the project site, is a two-to-six-lane east west arterial. West Hillsdale Boulevard has six lanes with a landscaped median west of SR-92, four lanes with a striped median between SR-92 and Glendora Drive, and two lanes east of Glendora Drive. Access to the site is provided via Csm Drive.

*CSM Drive* is a two-lane east-west collector street with sidewalks, it begins within the College of San Mateo and terminates west of Parrott Drive. Access to site is provided via Parrott Drive.

## **Existing Transit Service**

Transit service to the study area is provided by the San Mateo County Transit District (SamTrans) and Caltrain. These services are described below.

### ***SamTrans Bus Service***

There is one bus line that operates near the project site. The *260 line* provides service between the College of San Mateo and the San Carlos Caltrain station, via Polhemus Road-Ralston Avenue, Marine World Parkway and Redwood Shores, with 60-minute headways during commute hours.

### ***Caltrain Service***

Commuter rail service between San Francisco and Gilroy is provided by Caltrain. The project is located approximately three miles from the Hillsdale Caltrain station. The Hillsdale station is located near the interchange of Hillsdale Boulevard and El Camino Real. At the Hillsdale station, Caltrain provides service with approximately 10- to 20-minute headways during commute hours. The Hillsdale station has park and ride lots. There is no direct bus service from the site to Caltrain.

## **Existing Traffic Volumes**

The existing peak hour and 24-hour traffic volumes were obtained from new tube counts on the study roadway segments. The counts were conducted in late May 2008 while the College of San Mateo was in session. The existing AM, PM, and daily traffic volumes are shown on Figure 2. The traffic count data are included in Appendix A.

## **Existing Volume to Capacity Ratios**

The results of the V/C analysis under Existing Conditions are summarized in Table 1. The results show that the study roadway segments operate well within acceptable limits.

**LEGEND**

-  = Site
- XXXX** = Vehicles Per Day

Figure 2

**EXISTING TRAFFIC VOLUMES**

**Table 1**  
**Existing Volume to Capacity Ratios**

Roadway Segment	Street Classification	Capacity	Existing	
			Volume (vpd)	V/C
Polhemus Rd (btwn Ascension Dr & De Anza Blvd)	Arterial	20,000	4,298	0.21
Ascension Dr (btwn Polhemus Rd & Rainbow Dr)	Local	2,000	1,432	0.72
Bel Aire Rd (btwn Ascension Dr & Laurie Ln)	Local	2,000	695	0.35
Laurie Ln (btwn Bel Aire Rd & Parrott Dr)	Local	2,000	953	0.48
Parrott Dr (btwn Laurie Ln & Csm Dr)	Collector	20,000	2,145	0.11
CSM Dr (btwn Parrott Dr & Hillsdale Blvd)	Collector	20,000	2,545	0.13

(vpd) = Vehicles per day

**Existing TIRE Index**

The results of the TIRE index analysis under existing conditions are summarized in Table 2. Of the three local residential streets, Ascension Drive is operating slightly above the mid-range of the TIRE index. Polhemus Road, Parrott Drive and CSM Drive are more traffic-dominated, which is expected for collector or arterial streets.

**Table 2**  
**Existing TIRE Index of Roadway Segments**

Roadway Segment	Existing	
	Volume (vpd)	TIRE <sup>/a/</sup> Index
Polhemus Rd (btwn Ascension Dr & De Anza Blvd)	4,298	3.6
Ascension Dr (btwn Polhemus Rd & Rainbow Dr)	1,432	3.2

### **3. Background Conditions**

---

Background conditions represent the traffic conditions that are expected to occur with the addition of traffic from approved developments and, as applicable, with the addition of developer-conditioned transportation improvements. Approved projects are those developments that have been approved but which are not yet constructed or occupied.

#### **Approved Development**

There are no developments that have been approved but not yet constructed in the vicinity of the project site. Trips generated by small or distant developments would be negligible on the study roadway segments. The effect of other foreseeable development that has not been approved by the County of San Mateo is addressed in the Cumulative analysis presented later in this report.

## 4. Project Conditions

---

Project conditions are defined as background conditions with the addition of traffic generated by the project.

The project site is located at the northeast corner of Bel Aire Road and Ascension Drive in the San Mateo Highlands, an unincorporated area in San Mateo County. The project consists of development of six parcels totaling 13.3 acres to construct 25 new single-family-detached residential dwelling units. The site is currently vacant. Access to the site will be provided via Bel Aire Road.

### Project Trip Generation, Distribution and Assignment

The magnitude of traffic added to the roadway system by the project was estimated by multiplying the applicable trip generation rates by the size of the development. Trip generation for the proposed project was estimated using the rates published in the Institute of Transportation Engineers (ITE) manual titled *Trip Generation*, Seventh Edition, 2003. The published rates are based on data collected from hundreds of studies conducted for projects with land uses similar to the use proposed for this project. The estimated peak-hour and daily trip generation totals for the project are shown in Table 3.

**Table 3**  
**Project Trip Generation**

Use	Size/a/	Daily		AM Peak Hour				PM Peak Hour			
		Rate	Trips	Rate	Trips			Rate	Trips		
					In	Out	Total		In	Out	Total
Single Family Detached Residential	25	9.57	239	0.75	5	14	19	1.01	16	9	25

/a/ Size expressed in dwelling units (d.u.)

Source: Institute of Transportation Engineers, *Trip Generation*, 7th Edition, 2003.

The table shows that the project would generate 239 new daily trips, with 19 new trips occurring during the AM peak hour and 25 new trips occurring during the PM peak hour.

The trip distribution pattern for the proposed project was estimated based on existing travel patterns on the surrounding roadway system and minimum travel times between the site and SR92. Travel time runs conducted for this study showed that the fastest route between the site and SR92 is via Laurie Lane, Parrott Drive, CSM Drive, and Hillsdale Boulevard. Nevertheless, some traffic was assumed to use Ascension Drive and Polhemus Road. Based on the trip distribution shown, the peak-hour trips generated by the proposed development were assigned to the roadway system following logical paths. The project trip distribution and assignment are shown on Figure 3.

### Project Peak Hour Traffic Volumes and V/C

The project trips, estimated as described above, were added to background traffic volumes to obtain project traffic volumes. The project traffic volumes are shown on Figure 4.

Traffic conditions at the study roadway segments were evaluated using V/C. The roadway segments' V/C for project conditions are summarized in Table 4. The results show that traffic increase on the all study roadway segments would be less than significant.

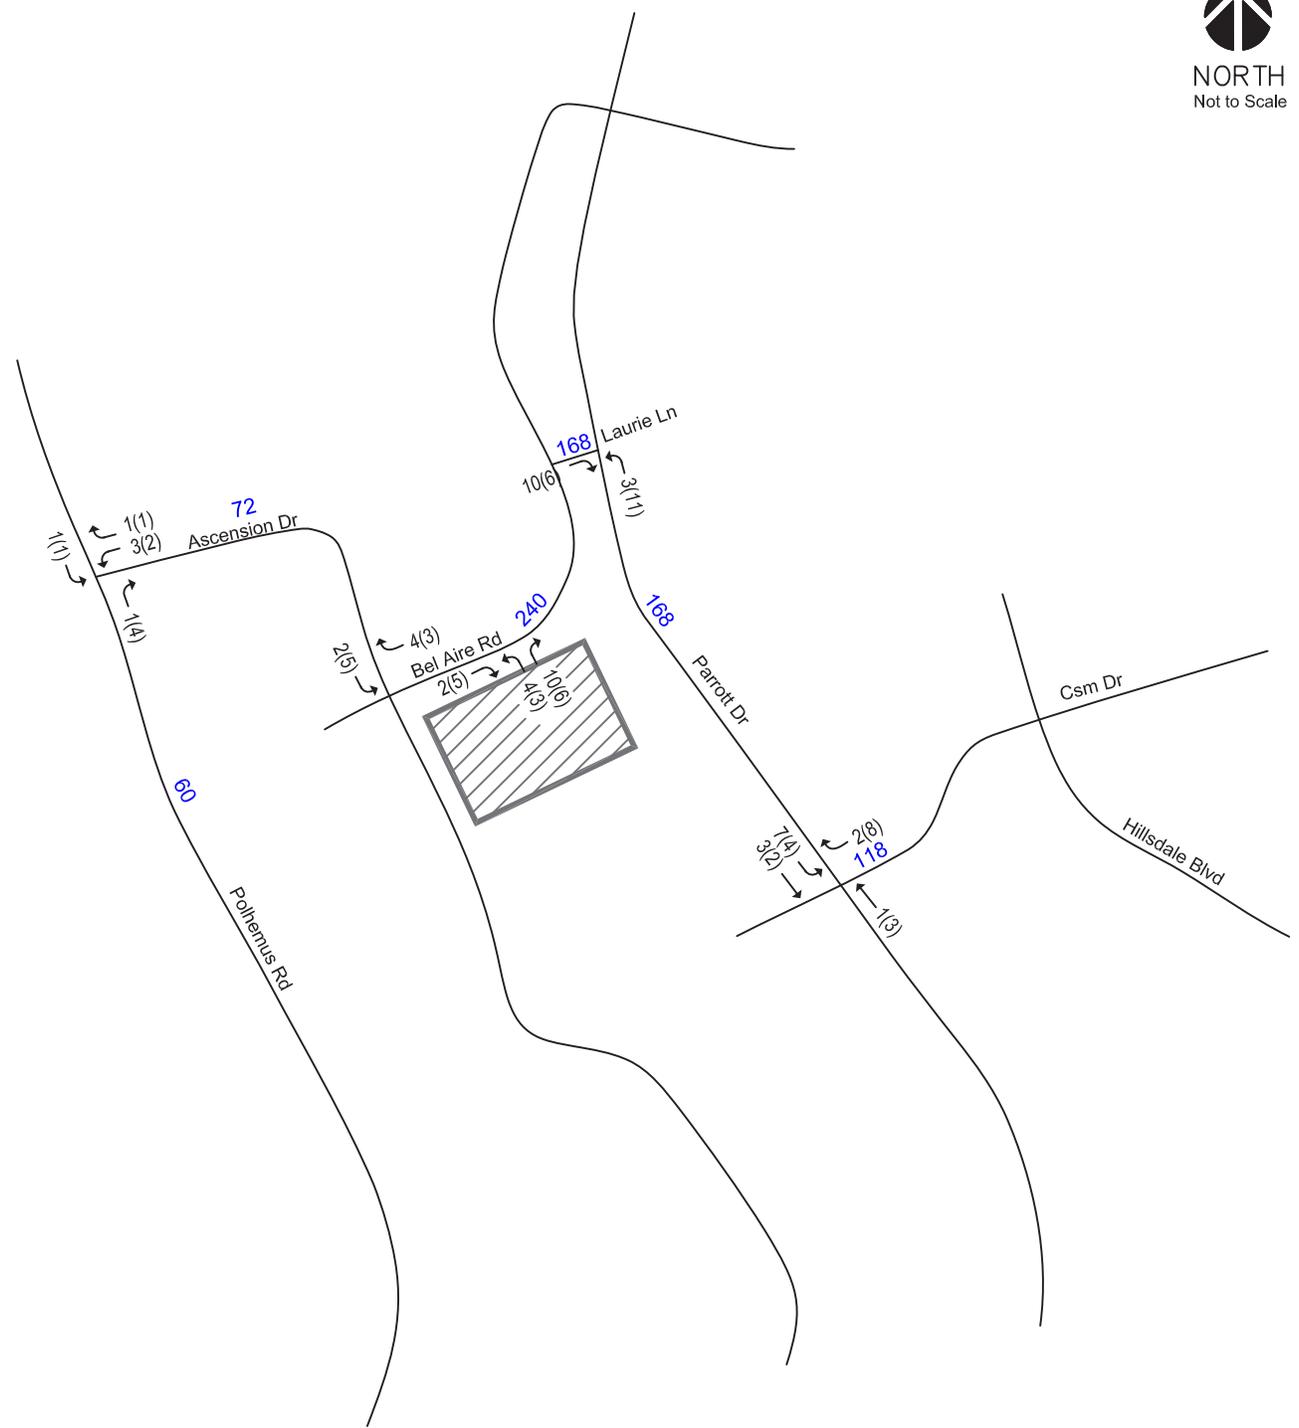

**Table 4**  
**Project Volume to Capacity Ratios**

Roadway Segment	Capacity (vpd)	Existing		Project		
		Volume (vpd)	V/C	Proj Trips (vpd)	Volume (vpd)	V/C
Polhemus Rd (Ascension Dr to De Anza Blvd)	20,000	4,298	0.21	+ 60	4,358	0.22
Ascension Dr (Polhemus Rd to Bel Aire Road)	2,000	1,432	0.72	+ 72	1,504	0.75
Bel Aire Rd (Ascension Dr to Laurie Ln)	2,000	695	0.35	+ 240	935	0.47
Laurie Ln (Bel Aire Rd to Parrott Dr)	2,000	953	0.48	+ 168	1,121	0.56
Parrott Dr (Laurie Ln to Csm Dr)	20,000	2,145	0.11	+ 168	2,313	0.12
CSM Dr (Parrott Dr to Hillsdale Blvd)	20,000	2,545	0.13	+ 118	2,663	0.13

(vpd) = Vehicles per day

### Project TIRE Index

Traffic conditions at the study roadway segments were evaluated using TIRE index (See Table 5). The results show that the traffic increase due to the project would cause three of the study roadway segments to incur a change to the TIRE index.

**LEGEND**

-  = Site
- XXXX** = Vehicles Per Day
- XX(X) = AM(PM) Peak Hour Trips

Figure 3

# PROJECT TRIP DISTRIBUTION AND ASSIGNMENT

**LEGEND**

-  = Site
- XXXX** = Vehicles Per Day

Figure 4

**TRAFFIC VOLUMES UNDER PROJECT CONDITIONS**

**Table 5  
Project TIRE Index of Roadway Segments**

Roadway Segment	Existing		Project		
	Volume (vpd)	TIRE <sup>/a/</sup> Index	Proj Trips (vpd)	Volume (vpd)	TIRE <sup>/a/</sup> Index
Polhemus Rd (btwn Ascension Dr & De Anza Blvd)	4,298	3.6	+ 60	4,358	3.6
Ascension Dr (btwn Polhemus Rd & Rainbow Dr)	1,432	3.2	+ 72	1,504	3.2
Bel Aire Rd (btwn Ascension Dr & Laurie Ln)	695	2.8	+ 240	935	3.0
Laurie Ln (btwn Bel Aire Rd & Parrott Dr)	953	3.0	+ 168	1,121	3.1
Parrott Dr (btwn Laurie Ln & Csm Dr)	2,145	3.3	+ 168	2,313	3.4
CSM Dr (btwn Parrott Dr & Hillsdale Blvd)	2,545	3.4	+ 118	2,663	3.4

/a/ Source: Goodrich Traffic Group  
(vpd) = Vehicles per day

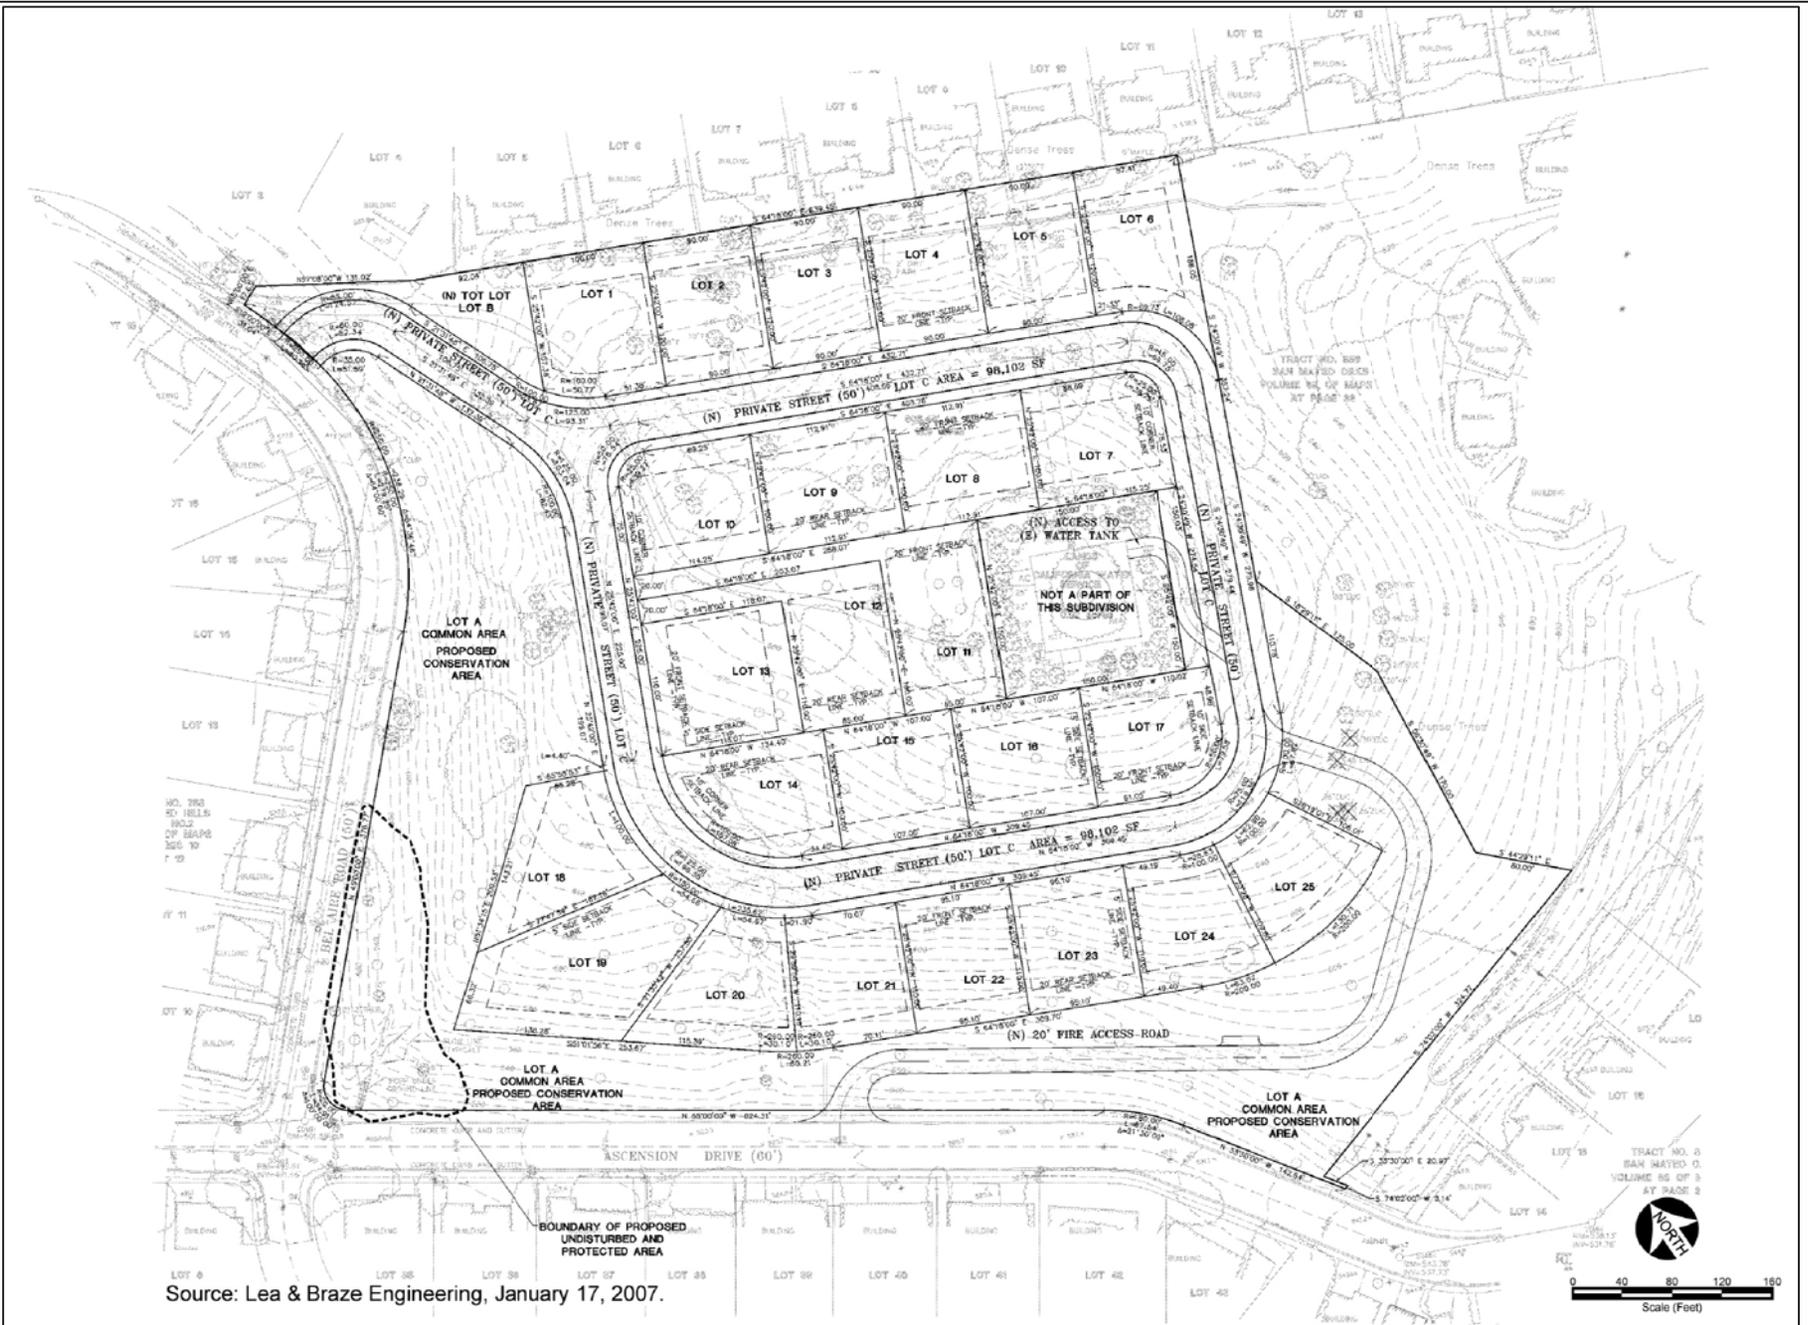

The increase in traffic due to the project would cause the TIRE index for Bel Aire Road to change from an index of 2.8 to 3.0. Similarly, the TIRE index for Laurie Lane would change from an index of 3.0 to 3.1, and the TIRE index for Parrott Drive would change from an index of 3.3 to 3.4. The definition of change in the TIRE index is that the traffic increase would be noticeable to residents along the street. Thus, the traffic increase due to the project would be noticeable on these roadways but not noticeable on the other area streets. Although the change in traffic volume would be noticeable, the traffic volume on Bel Aire Road and on Laurie Lane, two residential streets, would be well below the residential street threshold of 2,000 vehicles per day. Therefore, the traffic increase on Bel Aire Road and on Laurie Lane is considered less than significant. Similarly, while the increase in traffic would be noticeable on Parrott Drive, the traffic volume would be well below its threshold of 20,000 vehicles per day as a collector street. Therefore, the traffic increase on Parrott Drive is considered less than significant.

## Site Access and Circulation

Site access, circulation and parking were evaluated based on the site plan dated January 17, 2007. The site plan is shown on Figure 5.

### Site Access

Access to the site would be provided via a new subdivision street connecting to Bel Aire Road. The new subdivision street would be a public street. Emergency vehicle access to the project would be provided via the new subdivision street connecting to Bel Aire Road, as well as a new Emergency Vehicle Access Road to the subdivision, connecting to Ascension Drive.

Source: Lea & Braze Engineering, January 17, 2007.

Scale (Feet)  
0 40 80 120 160

Figure 5

# PROJECT SITE PLAN

Ascension Subdivision - Residential Development

## Sight Distances On Bel Aire Road

At the intersection of Bel Aire Road and the new subdivision street sight distance was checked.

For inbound left turns the sight distance is 210 feet. The Caltrans *Highway Design Manual* specifies minimum required sight distances as a function of vehicle speed. Vehicle speed is, in turn, a function of the design of Bel Aire Road. The estimated 85<sup>th</sup> percentile speed on Bel Aire Road is 29 miles per hour, which requires a minimum stopping sight distance of 200 feet. Since the available sight distance (210 feet) is greater than the minimum stopping sight distance (200 feet), the sight distance at this location is satisfactory.

For outbound left or right turns the sight distance is at least 260 feet. This sight distance is satisfactory for the prevailing speeds on Bel Aire Road.

### **Accident Evaluation**

Traffic accident records were obtained from the county for the years 1996 to 2002 for Polhemus Road, Ascension Road, Bel Aire Road, Laurie Lane, Parrott Drive, and CSM Drive (See Table 6). The records show that there has been one accident in the six-year period at each of the locations shown in Table 6. None of the accidents involved pedestrians. Also, none of accidents reported were due to lack of sight distance or roadway design features. Due to the low accident history, no further analysis was warranted.

**Table 6**  
**Accident Data Summary**

Location	No. of Accidents	Year	Type of Collision
Parrott Dr & CSM Dr	1	2001	Side Swipe
Parrott Dr & Bel Aire Rd	1	1997	Side Swipe
Bel Aire Rd & Laurie Ln	1	1997	Side Swipe
Polhemus Rd & Ascension Dr	1	1996	Hit Fixed Object

Source: San Mateo County - Collision Location Details

### **On-Site Circulation**

On-site circulation issues include street widths, grades, and curves.

#### **Street Widths**

The new subdivision street is shown to be generally 32 feet wide curb-to-curb. There is one section that would be 22 feet wide. Because of the steep grades and curves on site, it would be difficult for drivers to maneuver within 32 feet with parking on both sides. Therefore, parking should be allowed on only one side of the street. Parking should not be allowed on the 22-foot wide section.

## Street Grades

The Site plan shows a maximum grade of 20%. According to San Mateo County standards, the typical maximum grade is 15% with up to 20% allowed by design exception. Thus, the proposed grades are acceptable by design exception. Given the terrain of the site, it would not be possible to reduce the grades to 15%.

## Street Curves

The street curves were analyzed with typical vehicle templates, including cars and trucks, such as fire trucks or garbage trucks. The analysis showed that both cars and trucks could maneuver around the curves.

## **Pedestrian Access**

Pedestrian facilities in the area consist of sidewalks on the neighborhood streets. The project site plan shows that the new subdivision street would have sidewalks along most of the new subdivision street. Also, there would be separate sidewalks down the hill to Ascension Drive.

The sidewalks would be adequate to accommodate all pedestrian traffic between the project site and other local streets.

## **Congestion Management Program**

The CMP guidelines specify that a project must implement travel demand management (TDM) measures if the project produces 100 or more new peak hour trips on CMP roadways. The analysis of project traffic on CMP roadway facilities indicates that the project would add approximately 19 trips to SR 92 during the AM peak hour and approximately 25 trips during the PM peak hour. Therefore this project is not required to implement any TDM measures.

## **Construction Impacts**

The most noticeable traffic impact during construction will be hauling excavated soil from the site. The project civil engineer estimated 60,520 cubic yards of soil would need to be exported from the site. It is assumed that a tractor with double trailer would be used to haul the soil. A truck can carry about 20 cubic yards of soil per trip. Therefore there would be 3,026 truck round trips for exporting soil. The grading is estimated to be completed in about 44 days, so this calculates to about 69 truck round trips per day. The haul routes should be limited to SR-92, West Hillside Drive, Csm Drive, Parrott Drive, Laurie Lane, and Bel Aire Road. Heavy trucks are not recommended on Ascension Drive because it is so steep. The addition of 69 truck round trips per day to the roads in the area would be a temporary significant impact of the project. The project applicant has stated that parking for construction vehicles and workers can occur entirely on site. There would not be a need to park on Bel Aire Road.

## 5. Cumulative Conditions

---

Project buildout is expected to take approximately 5 years, so the expected completion date would be around 2013. The San Mateo County traffic model 2020 forecasts were used to estimate that growth in the area is projected to be about 5% per year. Thus, the existing volumes were increased 25% to represent 2013 conditions. This increase would cover currently proposed projects, such as the CSM housing, and other growth not yet defined. Traffic volumes under cumulative conditions are shown on Figure 6.

Table 7 shows the resulting volumes and V/C ratios on the study roadways. The roadways would continue to operate well within capacity.

**Table 7**  
**Cumulative Volume to Capacity Ratios**

Roadway Segment	Cap	Cumulative				
		W/out the Project		With the Project		
		Vol (vpd)	V/C	Proj Trips (vpd)	Vol (vpd)	V/C
Polhemus Rd (btwn Ascension Dr & De Anza Blvd)	20,000	5,373	0.27	+ 60	5,433	0.27
Ascension Dr (btwn Polhemus Rd & Rainbow Dr)	2,000	1,790	0.90	+ 72	1,862	0.93
Bel Aire Rd (btwn Ascension Dr & Laurie Ln)	2,000	869	0.43	+ 240	1,109	0.55
Laurie Ln (btwn Bel Aire Rd & Parrott Dr)	2,000	1,191	0.60	+ 168	1,359	0.68
Parrott Dr (btwn Laurie Ln & Csm Dr)	20,000	2,681	0.13	+ 168	2,849	0.14
CSM Dr (btwn Parrott Dr & Hillsdale Blvd)	20,000	3,181	0.16	+ 118	3,299	0.16

(vpd) = Vehicles per day

**LEGEND**

-  = Site
- XXXX** = Vehicles Per Day

Figure 6

**TRAFFIC VOLUMES UNDER CUMULATIVE CONDITIONS (WITH THE PROJECT)**

## 6. Summary of Findings

---

The potential impacts of the project were evaluated in accordance with typical traffic engineering standards. The study included the analysis of AM and PM daily traffic conditions for six roadway segments. Site access and on-site circulation also were analyzed, as well as construction impacts.

### Impacts and Recommendations

There would be a temporary significant impact due to truck trips during excavation. According to the applicant, the excavation would last about 44 days. Construction impacts should be minimized by restrictions on operating hours. Also, trucks should avoid Ascension Drive because of the steep grade.

The new subdivision street is planned to be 32 feet in width. Given the grades and curves, this width is inadequate to allow parking on both sides. Therefore, parking should be allowed on one side only.

Pete,

I was wondering if you had a free moment to talk with either Jim Eggemeyer and/or myself regarding the emergency access road proposed for the Ascension Heights subdivision. The EIR consultants have acknowledged Cal-Fire's recommendation for the road not to exceed a 15% grade, which potentially could be an issue due to engineering and topography constrains preventing a grade no less that 20%. Please let me know when we might take a few minutes of your time to discuss as to get this issue ironed out before publication of the document. Thanks Pete.

Regards,  
JAMES

>>> "Demouthe, Jean" < >>> 10/27/2008 3:39 PM >>>

Dear Jim & Jay:

here are my comments about the Ascension Heights EIR:

-they need to define the physical relationship between the sandstone and the greenstone (i.e. who's on top? nature of the contact?)

-colluvium reported to be up to 5 feet deep in old swales but this doesn't seem to bother them.

-regarding the cross-sections....where is the greenstone? And they should show bedding orientation in the sandstone (diagrammatically at least) on the sections.

-serious gully erosion present. Drainage is going to be a serious problem, during and after grading and construction. Erosion hazard, too. But the report skims over these problems.

-project has huge amount of grading, and will result in very steep slopes. Potential for lots of erosion.

-the bedding is described as having a shallow dip to the NE, which makes the north and northeast slopes dipslopes, with the potential for slope stability problems. It is odd that they say (page 7: landslides) that this slope has the lowest susceptibility for failure.

-the text says there is little hazard from deep-seated landslides, but the hazard analysis (page 18) says there are weak zones below (?) the sandstone that could result in deep failure.

-with all the grading planned, it is hard to imagine that there will still be a potential for debris flow failures, unless areas of colluvium, deep soils, or unengineered fill will remain on the site.

-I agree that landslide hazards on this site are significant, but their justification for saying so seems to be at odds with information in the early part of the report. This whole hazard analysis section reads like it was written by a different person (who didn't read the first part of the report).

-why does the EIR contain engineering recommendations? (page 19) This reads like it was culled right out of the Michelucchi report.

I've got a mess o' graduate students coming in 15 minutes, so I'll stop now.

Call me if you have questions.

Jim,

I received this morning the screencheck draft EIR for the Dennis Thomas subdivision. If I can, I'd like to touch base with you on how much time you'll need to review it so I can report back to CAJA on the expected date of return. I'm planning to have my review complete by Monday or Tuesday or next week. There are a few items I need to run past Diana Sho and I want to give her no more than a week to review those items. The screencheck is in word format to allow track changes, and I have placed those files on the graphics/"L" drive under the directory "Ascension Heights EIR". Again, when you have a free moment let me know.

Hi Jim,

As we research the past six years of correspondence regarding the Ascension Heights subdivision, we are finding correspondence regarding the Jim Rust letters of 2003 and submittal issues from that time. We are still working on the more recent material and will have a better idea of that by middle of next week. The road elevations within the subdivision as well as the main entrance road have not been accessed yet. If we can get a copy of those early next week it will improve our response.

Chief Jolley,  
I guess I must have missed you yesterday. I gave Mark Colbert a copy of the plans what we have that show a little more detail regarding the slop of the Emergency Access Road and was going to get those to you. Let me know if you require any further material to help your evaluation.

Hi Jim,

As we research the past six years of correspondence regarding the Ascension Heights subdivision, we are finding correspondence regarding the Jim Rust letters of 2003 and submittal issues from that time. We are still working on the more recent material and will have a better idea of that by middle of next week. The road elevations within the subdivision as well as the main entrance road have not been accessed yet. If we can get a copy of those early next week it will improve our response.

Thanks James,

I was discussing them with Marc today and will get back to you tomorrow on the project.

Subject: Response to request for comments for Ascension Height Subdivision.

This memo is in response to a query regarding the secondary access road by Jim Eggemeyer.

Our review of the vesting tentative subdivision map provided was focused on the secondary access road to the subdivision from Ascension Drive to the Private Street within the proposed subdivision.

Specifically addressed was the 20% grade delineated on the vesting tentative subdivision map prior to and subsequent to the 5% grade at the turnout.

I am willing to allow this grade at this time based on the documentation in our files and the roads status as a secondary emergency access. This length of 20% grade (unbroken grade greater than 150') is not acceptable for primary access roads. The San Mateo County Fire Department will require a plan and profile of the all roads within the project including the primary and secondary access roads and all roads, dead end driveways and Fire turnarounds within the subdivision.

At building permit submittal, County Fire will require a report of findings justifying the greater than 15% slope throughout the project as specified by County Ordinance and a request for exemption.

Road widths and parking restrictions shown on the plan are non-compliant with County Fire requirements as required in prior correspondence and are not approved as shown.

Clayton Jolley  
Battalion Chief/Fire Marshal  
San Mateo County Fire/CAL FIRE

**Subject:** Quick Ascension Heights update

Just a brief update on latest with Ascension Heights:

I finally was able to speak to Chief Jolley Friday afternoon to discuss his comments sent a few weeks back. He explained that the statement at the end of his letter (road width and parking restrictions) was simply reiterating earlier comments made in response to the EIR where CALFIRE has maintain that the subdivision roads width will need to be wide enough to accommodate equipment. This is immaterial of any design standards regulations for public or private roads. He also explained that the mitigation measure proposed by CAJA works in addressing this situation, and anticipates seeing that incorporated with the recorded map.

After Thursday's conference call with Dennis Thomas discussing the implication of the possible sewer issue mitigation, Jim suggested setting up a meeting with Ann Stillman to go over what will eventually be our own crafted mitigation measure regarding the sewer inflow and infiltration (I&I). I have not had any response to my request for a meeting. Ill send a follow up later this afternoon.

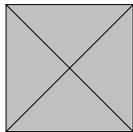

JAMES

Lisa/Jim,

Below is Geoff Reilly's confirmation that a November 13, 2009 target date would be acceptable for releasing the FEIR. I did ask to please indicate any unanticipated issues that may prevent keeping the document on track, in which it was indicated that a issue may arise if the response to comments ate into more time than what was originally budgeted.

JAMES

>>> On 9/23/2009 at 13:29, "Geoff Reilly" <geoff.reilly@cajaeir.com> wrote:

Hi James,

First, thanks for the transcript. It provides sufficient detail to facilitate adequate responses to comments, much better than simple Minutes which typically paraphrase comments.

The timeline you outline is very reasonable and I don't anticipate any problems meeting that schedule, including wrapping up all edits to the FEIR by lat week of Oct. and releasing the FEIR by Nov. 13. I have saved the day of Dec. 9 for the PC meeting.

While we are not being directed to prepare a Health Risk Assessment the EIR does identify construction Air Quality impacts as being significant and unavoidable. We will rely on that analysis to address comments about health impacts, etc. and may create what we call Master or Topical Responses for common comments such as health risk, slope stability, etc.

The only potential delay I can foresee at this time is if the comments require more time/budget than we anticipated in our original contract. (My notes show we have 70 comment letters in addition to hearing comments) As you may recall, the applicant refused to honor a contract amendment we had submitted, and hence we have no budget left to do this work, including time for technical subs (and there are some traffic comments for example). If we reach that previously budgeted time for the FEIR but have not completed the FEIR, we may need additional funds to complete the FEIR. I will let Jim know ASAP if that is the case.

Thanks and I hope you have a pleasant time away from the office.

Geoff

Geoff,

Attached is the transcripts to the September 9, 2009 Planning Commission meeting. Let me know if you have any questions. A few individuals are indicated as "unknown male", but I've determined they're either John Nibbelin (county counsel), or Commissioner Bomberger. All public members who gave testimony have been identified.

Jim Eggemeyer and myself meet with Lisa Grote this morning, and after briefing her on the hearing and discussing the issues raised, look like we're comfortable proceeding with responding to comments through the FEIR, assuming that your final analysis concludes we can address comments sufficiently without supplemental materials or recirculation. I did discuss the Health Risk Assessment in the meeting, in which we all agreed would be something Mr. Thomas would most likely not consider. Lisa was please to hear that we would have a draft by the end of the week and continuing to work towards keeping the project on track. That being said, a few things I need to mention:

I will be taking my vacation starting Monday, September 28 till Tuesday, October 20. Unfortunately since my trip was planned almost a year ago, I will have to be absent during this final draft period of the EIR document. In efforts to keep this moving, Jim will review your draft of the responses to comments and provide feedback and edits. My hope is to get any edits that need to occur taken care of while I'm away from the office.

What also came out this morning's meeting is trying to establish our timeline leading up to a December 9, 2009 PC meeting. This would mean the FEIR would need to have a target availability date preferably November 13, 2009. Assuming our edits to your response are minimal and resolved by the last week in October, how reasonable would the November 13 release date be? Please let me know when you get an opportunity. Also keep me apprized of anything else outstanding I might have not considered in moving forward.

While I'm gone, Mike Schaller (my senior planner who is familiar with the project) will be taking general public inquires for the project, and I will provide him your contact information if he has any specific questions. Ill send an email Friday to the both of you with contact information and instructions to CC draft responses documents to him.

When you get a chance, let me know the feasibility of the November 13 availability, as well as what needs to happen for that to occur. Thanks Geoff!

Jim and Steve,

We're waiting to hear from Geoff Reilly, CAJA, about whether or not the Dennis Thomas subdivision (Ascension heights) FEIR will be ready for the December 9th PC hearing. If it is, there will be two very large projects on that agenda - the subdivision FEIR and the Housing Element. The neighbors in the subdivision vicinity have requested a night meeting in their neighborhood - or close by.

We have time to think about this, but if we decide to hold a night meeting for the subdivision, I don't think the Commissioners will want to meet that morning too. This will mean the Housing Element would have to be dealt with at the night meeting as well. This may be a reason not to hold the subdivision hearing at night, but any thoughts you have would be appreciated. I'll also discuss it with the Commissioners at the Oct. 28th meeting when we talk about scheduling and upcoming projects.

**For Immediate Release**  
**Baywood Park Homeowners' Association**

**Lethal Dust Clouds to Threaten CSM – Area Neighborhoods**  
**September 30, 2009**

Construction of the 25-29 unit Ascension Heights project by San Mateo Developer Dennis Thomas's project will disperse lethal dust and gas within an older established residential area and College of San Mateo (CSM), the San Mateo County Planning Commission learned for the first time on September 9<sup>th</sup>.

The County's own environmental report prepared by its staff and a paid outside consultant report failed to reveal full information on impacts of enormous grading and thousands of truck trips to tear out area hilltop resulting in excessive truck traffic and dangerously degraded air quality levels, which exceed state environmental limits by eight fold.

According to research studies and the expert testimony of Gerard Ozanne, MD, who is also President of the Baywood Park Homeowners Association: "a building project of this magnitude will result in *immediate* increases in risks to health, including death, due to excessive truck pollution and soil dust." Experts for BPHA documented an inadequate environmental study of Thomas's five-year construction project. Consulting geology experts Cotton, Shires & Associates stated that Thomas's project does not meet Bay Area construction standards.

Serious risk to health and lives of residents of the local neighborhoods extends to nearby neighborhoods of San Mateo Oaks, Highlands, Baywood Plaza and Crystal Springs Shopping Center, and College of San Mateo.

Because of the environmental report's incomplete and absent disclosures, unsubstantiated conclusions, avoidance of obvious mitigation measures, project instability, lack of definitive project descriptions, and life threatening hazards, neighbors requested the Planning Commission direct the study be revised and recirculated in its entirety.

Mr. McClellan of BPHA Board stated: "We formally submitted these concerns seven years ago. Neighbors are terrified that County management has allowed this study to be so profoundly inadequate. In addition, BPHA and area communities have been confronted this month with another similar inadequate environmental study ignoring community and expert information. Our only recourse now is to ask the Planning Commission and Board of Supervisors require genuine community involvement and direct proper environmental studies to ensure safe and reasonable developments in our neighborhood."

 Attachment Press Release - Final, September2009.doc

All,

Please review the attached statement. Jim, can you please let Marshall know that you are available to talk with the reporter tomorrow. If it can wait until Monday afternoon, I'll talk with him/her.

Thanks,  
Lisa

>>> Marshall Wilson 9/30/2009 3:48 PM >>>

Lisa and Jim,

Please see the attached "news release" from neighbors of Ascension Heights. I've also learned they are attempting to arrange a site visit with Supervisor Church.

The reporter is not planning a story today for tomorrow but would like to speak with someone tomorrow about this issue. Thanks.

Greetings.

I just spoke with the reporter and he would like to speak to someone today regarding this issue. He does not plan to wait until Monday when Lisa is available. Could Jim Eggemeyer perhaps call him? He's: Bill Silverfarb, San Mateo Daily Journal  
<http://www.smdailyjournal.com>  
650-344-5200

Please let me know if can assist. Thanks.

All,

This is the result of the release of the Draft EIR in early Sept. regarding the proposed 25 lot subdivision off of Ascension Drive. Jim Eggemeyer can talk with the reporter if needed on Thursday. I've copied him on this reply and also forwarded him a copy of the attachment. I'll be back in the office on Monday afternoon if it can wait until then.

Thanks,  
Lisa

**Subject:** Re: Fwd: YSC Grading (OUT OF THE OFFICE)

I'm currently out of the office until Wednesday, October 21, 2009. If need any assistanace regarding the Ascension Heights Subdivision project, or the Agricultural Advisory Committee, please contact Mike Schaller at 650-363-1849, or mschaller@co.sanmateo.ca.us. All other general planning inquiries should be directed to the Planning Counter help desk at 650-363-1825.

>>> Jim Eggemeyer 10/19/09 15:25 >>>

Dennis, Below is the answer from SMC Dept. of Public Works to your question you had last week.

jke

>>> Doug Koenig 10/19/2009 9:29 AM >>>  
Jim,

Turner moved about 130,000 CY over a 10 month period, 11/03-8/04. All the Turner folks involved in the project have moved on.

thanks,  
doug

**Subject:** Ascension Heights Mailing List

James,

Please check to see if any portion of the College of San Mateo's property falls within 300 feet of the proposed Ascension Heights subdivision. I received a phone message on Friday afternoon from Barbara Christensen of the College District saying that she hadn't received notice of the availability of the draft EIR and has concerns about the project. She believes a portion of one of the College parking lots falls within 300 feet of the project site. She will write us a letter outlining her concerns.

In the meantime, please check the mailing list and the distance between CSM and the proposed project. Please do this as soon as possible today or early tomorrow.

Thanks very much,  
Lisa

Lisa,

The College of San Mateo's campus is right inside the edge of our 300 foot notification boundary (310 feet from the subject site). They are included in the notification mailing list in two ways. First, as part of the agencies and school districts in the vicinity, and second, as a property owners within 600 feet of the subject site (I increased the notification boundary to avoid issues regarding adequate notification). To date, four letters have been sent out to the mailing list (three regarding the availability of the draft EIR, and one for the agenda). The address used for the college is:

San Mateo County Community College  
3401 CSM Drive  
San Mateo, CA 94402

This address was provided by assessors office as the address on record for the college's parcel. I have no received any returned mail from the college. Let me know if you need any further information.

JAMES

James,

Thanks for the information. It's very helpful and I'm glad to hear that CSM is on the notification list and that you increased the boundary to make sure as many property owners as possible are included. This will be helpful background when we meet with CSM representatives next week.

Thanks again,  
Lisa

Annie/Yulin.

The EIR document we need to post came in early. Ill bring it over on a flash drive shortly. Here is the following text that needs to replace what is on the existing Ascension Heights page

### **Ascension Heights Subdivision Environmental Impact Report Documents**

The Final Environmental Impact Report (FEIR) allows for the public and Lead Agency (County of San Mateo) to review comments and response to the Draft Environmental Impact Report published and released on June 22, 2009. Based on the response to comments included within the FEIR, no corrections have been made to the Ascension Heights Subdivision DEIR, and is now considered as part of the Final EIR in its original published form.

[Final EIR](#)(14.5 mb)

[Draft EIR](#)(24.9 mb)

[EIR Technical Appendices](#)(49.9 mb)

The documents listed above are presented in Portable Document Format (PDF). A PDF reader is required for viewing.

Hi James,

John,

As you may recall, I testified on the Ascension Heights project at the last planning commission hearing. In working with others in the area we have come upon several questions about the interrelationship of the FEIR, Grading Permit, the Conditions of Approval, Overriding Considerations and subsequent approval requirements for the subdivision along with other agencies approvals.

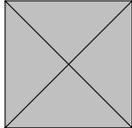

Would it be possible for myself and one or two other area residents to meet with you in person or by phone before the hearing on Wednesday to gain a better understanding of these areas? If at all possible, Monday would be best.

Lisa/Jim,

I followed up with Harris Dubrow this morning, who wanted to meet with County Council regarding procedural details regarding the individual permits and multiple resolutions the PC will need to adopt if the project is approved. I did provide a brief overview, but he and a few others would still like an opportunity to meet quickly with staff and county council prior to the hearing to get a better understanding of the process. That said, I have no issues meeting today and tomorrow based on everyone's availability. Please check back in with me if your able to participate in a brief meeting so I can arrange something with Mr. Dubrow. Thanks.

Conversation: Water Tank Easement  
Subject: Re: Water Tank Easement

Hi James,

I'm going through the issues you sent me per your conversation with Commissioner Slocum now. It's nice that she let you know before tonight's meeting. I went to a Planning Commissioner's conference at Sonoma State University last weekend and that was one thing they recommended to commissioners: don't blindside staff with questions without giving them prior notice.

For the water tank easement issue:

Figures III-12 (pg. 22) and III-17 (pg. III-34) of the DEIR do illustrate the existing easement, existing access to the water tank, and the proposed new access to the tank via the proposed private loop road on-site. Figure III-17 illustrates how the new water line would loop around the loop road and then ultimately connect back to the main line that goes off site at Lot 5 and within the easement.

Also, the following descriptions of the water infrastructure have been copied from the DEIR:

Page IV.J-28:

All appropriate utility-related easements would be provided within the proposed on-site development. Water service would be provided by the Cal Water via the on-site water tank located within the project site. The existing on-site water lines would be relocated to accommodate the new proposed development. The water tank would be accessed either via a connection to the water main in the private street with a saddle <sup>3</sup>T<sup>2</sup> connection. This connection would be implemented at the discretion of Cal Water. The proposed on-site water supply system would include: additional underground water pipelines and water mains in order to accommodate the proposed projects water needs (i.e., residential, fire emergency services). According to Cal Water, the developer will provide and pay for booster facilities at the tank site in order to serve the project with adequate water pressure. The proposed pipeline would loop around the proposed private street, while the water mains would be located within each individual lot (refer to Figure III-17). The on-site water pipeline segments would be connected to existing off-site water pipelines near: (1) the intersection of Bel Aire Road and the new private street; and (2) an extension from the north at the northeastern edge of the project site where other off-site single-family homes currently receive water service.

Page IV.J-29

Cal Water has stated that it is prepared to extend water service to the project site. A deposit of the estimated cost of this extension would be required of the project applicant. Additionally, Cal Water would require approval of a satisfactory design to serve the proposed project. For example, pipeline routes in public right-of-ways where possible, and easements must have good access and be of reasonable terrain.

I'll respond to as many of the points raised in your other email as I can next. I have put my phone on Do Not Disturb, so if you would like to talk today perhaps you can email me first.

Thanks,

Geoff

I'm going through the issues you sent me per your conversation with Commissioner Slocum now. It's nice that she let you know before tonight's meeting. I went to a Planning Commissioner's conference at Sonoma State University last weekend and that was one thing they recommended to commissioners: don't blindsides staff with questions without giving them prior notice.

For the water tank easement issue:

Figures III-12 (pg. 22) and III-17 (pg. III-34) of the DEIR do illustrate the existing easement, existing access to the water tank, and the proposed new access to the tank via the proposed private loop road on-site. Figure III-17 illustrates how the new water line would loop around the loop road and then ultimately connect back to the main line that goes off site at Lot 5 and within the easement.

Also, the following descriptions of the water infrastructure have been copied from the DEIR:

Page IV.J-28:

All appropriate utility-related easements would be provided within the proposed on-site development. Water service would be provided by the Cal Water via the on-site water tank located within the project site. The existing on-site water lines would be relocated to accommodate the new proposed development. The water tank would be accessed either via a connection to the water main in the private street with a saddle "T" connection. This connection would be implemented at the discretion of Cal Water. The proposed on-site water supply system would include: additional underground water pipelines and water mains in order to accommodate the proposed projects water needs (i.e., residential, fire emergency services). According to Cal Water, the developer will provide and pay for booster facilities at the tank site in order to serve the project with adequate water pressure. **The proposed pipeline would loop around the proposed private street, while the water mains would be located within each individual lot (refer to Figure III-17). The on-site water pipeline segments would be connected to existing off-site water pipelines near: (1) the intersection of Bel Aire Road and the new private street; and (2) an extension from the north at the northeastern edge of the project site where other off-site single-family homes currently receive water service.**

Page IV.J-29

Cal Water has stated that it is prepared to extend water service to the project site. A deposit of the estimated cost of this extension would be required of the project applicant. Additionally, Cal Water would require approval of a satisfactory design to serve the proposed project. For example, pipeline routes in public right-of-ways where possible, and easements must have good access and be of reasonable terrain.

I'll respond to as many of the points raised in your other email as I can next. I have put my phone on Do Not Disturb, so if you would like to talk today perhaps you can email me first.

Thanks,

Geoff

Hi James,

I'm going through the issues you sent me per your conversation with Commissioner Slocum now. It's nice that she let you know before tonight's meeting. I went to a Planning Commissioner's conference at Sonoma State University last weekend and that was one thing they recommended to commissioners: don't blindside staff with questions without giving them prior notice.

For the water tank easement issue:

Figures III-12 (pg. 22) and III-17 (pg. III-34) of the DEIR do illustrate the existing easement, existing access to the water tank, and the proposed new access to the tank via the proposed private loop road on-site. Figure III-17 illustrates how the new water line would loop around the loop road and then ultimately connect back to the main line that goes off site at Lot 5 and within the easement.

Also, the following descriptions of the water infrastructure have been copied from the DEIR:

Page IV.J-28:

All appropriate utility-related easements would be provided within the proposed on-site development. Water service would be provided by the Cal Water via the on-site water tank located within the project site. The existing on-site water lines would be relocated to accommodate the new proposed development. The water tank would be accessed either via a connection to the water main in the private street with a saddle "T" connection. This connection would be implemented at the discretion of Cal Water. The proposed on-site water

supply system would include: additional underground water pipelines and water mains in order to accommodate the proposed projects water needs (i.e., residential, fire emergency services).

According to Cal Water, the developer will provide and pay for booster facilities at the tank site in order to serve the project with adequate water pressure. **The proposed pipeline would loop around the proposed private street, while the water mains would be located within each individual lot (refer to Figure III-17). The on-site water pipeline segments would be connected to existing off-site water pipelines near: (1) the intersection of Bel Aire Road and the new private street; and (2) an extension from the north at the northeastern edge of the project site where other off-site single-family homes currently receive water service.**

Page IV.J-29

Cal Water has stated that it is prepared to extend water service to the project site. A deposit of the estimated cost of this extension would be required of the project applicant. Additionally, Cal Water would require approval of a satisfactory design to serve the proposed project. For example, pipeline routes in public right-of-ways where possible, and easements must have good access and be of reasonable terrain.

I'll respond to as many of the points raised in your other email as I can next. I have put my phone on Do Not Disturb, so if you would like to talk today perhaps you can email me first.

Forgot one more thing. Do we know if the existing easement that comes under proposed lot 5 to the water tank is suppose to be relocated or how this effects the development of the proposed lots on top of it? Looks like I overlooked this details and it was brought up by Gail how this works with the proposed development. I was unable to confirm if we've looked at that through the EIR or not. If you have anything on this or anything specific from Cal Water that I missed, let me know, otherwise I'm going to defer this over to Mr Thomas.

JAMES

Mr. Jim Eggemeyer  
Mr. James Castaneda  
San Mateo County Planning Department  
455 County Center, 2<sup>nd</sup> Floor  
Redwood City, CA 94063

Dear Jim and James,

On December 9, 2009 the San Mateo County Planning Commission voted 4-0 to deny the approval of a Major Subdivision, PLN2006-00357. I wish to appeal their decision to the Board of Supervisors and offer the following modifications to the proposal:

- 1.) I will submit, as soon as available, a new Tentative Map which reflects the concern of the Planning Commission by avoiding the steepest slopes and visual impacts to the Westerly side of the property. The number of lots will change, and the lots will be reduced in size to allow for smaller and lower priced homes being offered to the general public.
- 2.) Condition #24 should be eliminated due to the plan changing in that area.
- 3.) Condition #40 should be changed to read the hourly restrictions are for the construction of the Major Subdivision work only and not for the individual houses. Hours for truck soil export to be 9:30 am to 3:00 pm. No soil export on Saturday but standard County hours for construction activity shall apply for road work and other construction activities.
- 4.) Condition #50 must be changed to reflect the change in the plan design, when available.
- 5.) Condition #52 regarding haul routes. It was discussed at the Planning Commission meeting that leaving the site down Ascension Road directly to Polhemus was preferred due to the shorter length, fewer houses along that route and therefore less impact on fewer neighbors. Trucks returning on the reverse route would be empty when traveling up the grade reducing emissions.
- 6.) Condition 53 must be changed to reflect the hours agreed to in #40, include standard hours for Saturdays and the restriction is only for the Major Subdivision work, not the individual homes.

1777 Borel Place, Suite 330, San Mateo, CA 94402 • (650) 578-0330 • Fax (650) 578-0394

I will submit the new plan as soon as it is available. It will need to be circulated to the County of San Mateo Fire Department/Cal Fire for approval of the new road turnaround design prior to submitting to the Planning Department.

Very Truly Yours,

Dennis Thomas  
Project Applicant

Upgrading the Department's website, responding to budget challenges posed by the recession, participating on the Midcoast Stormwater Drainage Committee, re-establishing the Department's Employee Recognition Program, and enhancing coordination between departments and other agencies could be listed as an additional accomplishments. We might also want to edit/expand the reference to the Williamson Act program to state something like "Responded to Williamson Act Audit and Grand Jury Report and Initiated Program Improvements"; or we could move this reference to ongoing projects.

**Date:** 1/11/2010 3:29 PM  
**Subject:** Gail Slocum's Comments on Draft PC Minutes for December 9, 2009 Meeting (Ascension Heights)

Lise and Rosario,

In preparation for the PC's Jan13th meeting, have reviewed the draft December 9, 2009 minutes, and note that on Item 6 (Ascension Heights) at pages 9 - 10, there is only the most a barebones statement of the denial, that does not appear to reflect the full motion or key aspects of the discussion for context that I believe is necessary.

For starters, the motion itself had included a 5th, positive element to the following effect which was not included in the draft minutes (I hope you can confirm using whatever tape of the meeting you have - Here's my best recollection):

Please insert after Item 4 on page 10:

"The Planning Commission also encouraged the applicant to conduct a further meeting with the surrounding community to seek an alternative design that does not build on the steep south-facing slope of the site, and directed staff to assist as appropriate."

Also, I note that there is no statement at all about the basis for the denial. Not sure if that should go into the minutes (I would prefer it), or into a staff report to the Supervisors, but it would certainly be good for the Supervisors to see. Ideally something that would capture the major points, something like the following could be inserted below the section above:

"Among the bases for the Planning Commissions' findings were (1) that the project was not in conformance with General Plan Section \_\_\_ to the degree it would create new parcels and allow new building on a slope over of 40% (when the GP's maximum buildable slope is 30%), (2) that the project was not in conformance with General Plan Section \_\_\_ to the degree that steep south slope has geotechnical concerns for potential ground instability and erosion that could affect existing homes below [CITE TO THE TWO GP SECTIONS DAVE BOMBERGER CITED TO IN HIS ORAL COMMENTS THAT NIGHT - SHOULD BE ON THE TAPE OR YOU CAN EMAIL DAVE - I don't have mu notes here at work], (2) that air quality impacts could be reduced by omitting development on the steep south slope thus minimizing the amount of soil removal and truck trips that would necessary, as well

as (2) that the project's visual impacts could be significantly reduced by omitting development on the steep south facing slope (namely the proposal's two rows of three-story homes whose height could exceed 36' based on the County's method of calculation) since water tower hill is one of the highest points in the area and is visible from numerous areas, raising scenic corridor concerns that were not adequately addressed or mitigated in the EIR."

Commissioner Slocum distributed an illustrative drawing depicting a potential redesign that could provide for development of homes on the flatter areas of the site, along the lines of Alternatives B and D in the EIR, combined with elements of the applicant's proposal. Commissioner Slocum noted that this type of redesign, which would not create parcels \_\_\_ - \_\_\_ on the steep south facing slope, would appear to avoid most of the proposal's significant impacts and would address almost all of the community's remaining major concerns, yet allow for development of approximately 18 - 19 new homes plus a tot lot, a walking trail and add storm drainage to address the two deep erosion gullies. [Perhaps James can fill in the numbers of the lots that the illustrative map omitted - I don't have my Ascension EIR here with me at work today]

Finally, I would like my illustrative drawing to be part of the record - is it appropriate to attach it to the minutes to accomplish that goal?

I apologize for having to leave blanks, but I wanted to get this to you as soon as possible today and I didn't have my Ascension Heights file at work with me. Please call me if there are questions or you have other ideas for how to capture these concepts.

I am hopeful that Rosario can provide me with an email attaching a redlined redraft of the minutes reflecting the above as you all see most fit, that also fills in the blanks in my draft. That way I can double check at home tomorrow night.

Hope that is helpful.

Thanks,

Gail Slocum

Not sure if that should go into the minutes (I would prefer it), or into a staff report to the Supervisors, but it would certainly be good for the Supervisors to see. Ideally something that would capture the major points, something like the following could be inserted below the section above:

“Among the bases for the Planning Commissions' findings were (1) that the project was not in conformance with General Plan Section \_\_\_ to the degree it would create new parcels and allow new building on a slope over of 40% (when the GP's maximum buildable slope is 30%), (2) that the project was not in conformance with General Plan Section \_\_\_ to the degree that steep south slope has geotechnical concerns for potential ground instability and erosion that could affect existing homes below [CITE TO THE TWO GP SECTIONS DAVE BOMBERGER CITED TO IN HIS ORAL COMMENTS THAT NIGHT – SHOULD BE ON THE TAPE OR YOU CAN EMAIL DAVE – I don't have mu notes here at work], (2) that air quality impacts could be reduced by omitting development on the steep south slope thus minimizing the amount of soil removal and truck trips that would necessary, as well as (2) that the project's visual impacts could be significantly reduced by omitting development on the steep south facing slope (namely the proposal's two rows of three-story homes whose height could exceed 36' based on the County's method of calculation) since water tower hill is one of the highest points in the area and is visible from numerous areas, raising scenic corridor concerns that were not adequately addressed or mitigated in the EIR.”

Commissioner Slocum distributed an illustrative drawing depicting a potential redesign that could provide for development of homes on the flatter areas of the site, along the lines of Alternatives B and D in the EIR, combined with elements of the applicant's proposal. Commissioner Slocum noted that this type of

redesign, which would not create parcels \_\_\_ - \_\_\_ on the steep south facing slope, would appear to avoid most of the proposal's significant impacts and would address almost all of the community's remaining major concerns, yet allow for development of approximately 18 – 19 new homes plus a tot lot, a walking trail and add storm drainage to address the two deep erosion gullies. [Perhaps James can fill in the numbers of the lots that the illustrative map omitted – I don't have my Ascension EIR here with me at work today]

Finally, I would like my illustrative drawing to be part of the record – is it appropriate to attach it to the minutes to accomplish that goal?

I apologize for having to leave blanks, but I wanted to get this to you as soon as possible today and I didn't have my Ascension Heights file at work with me. Please call me if there are questions or you have other ideas for how to capture these concepts.

I am hopeful that Rosario can provide me with an email attaching a redlined redraft of the minutes reflecting the above as you all see most fit, that also fills in the blanks in my draft. That way I can double check at home tomorrow night.

Hope that is helpful.

Thanks,

*Gail Slocum*

Lise and Rosario,

In preparation for the PC's Jan13th meeting, have reviewed the draft December 9, 2009 minutes, and note that on Item 6 (Ascension Heights) at pages 9 – 10, there is only the most a barebones statement of the denial, that does not appear to reflect the full motion or key aspects of the discussion for context that I believe is necessary.

For starters, the motion itself had included a 5th, positive element to the following effect which was not included in the draft minutes (I hope you can confirm using whatever tape of the meeting you have – Here's my best recollection):

Please insert after Item 4 on page 10:

“The Planning Commission also encouraged the applicant to conduct a further meeting with the surrounding community to seek an alternative design that does not build on the steep south-facing slope of the site, and directed staff to assist as appropriate.”

Also, I note that there is no statement at all about the basis for the denial. Not sure if that should go into the minutes (I would prefer it), or into a staff report to the Supervisors, but it would certainly be good for the Supervisors to see. Ideally something that would capture the major points, something like the following could be inserted below the section above:

“Among the bases for the Planning Commissions' findings were (1) that the project was not in conformance with General Plan Section \_\_\_ to the degree it would create new parcels and allow new building on a slope over of 40% (when the GP's maximum buildable slope is 30%), (2) that the project was not in conformance with General Plan Section \_\_\_ to the degree that steep south slope has geotechnical concerns for potential ground instability and erosion that could affect existing homes below [CITE TO THE TWO GP SECTIONS DAVE BOMBERGER CITED TO IN HIS ORAL COMMENTS THAT NIGHT – SHOULD BE ON THE TAPE OR YOU CAN EMAIL DAVE – I don't have mu notes here at work], (2) that air quality impacts could be reduced by omitting development on the steep south slope thus minimizing the amount of soil removal and truck trips that would necessary, as well as (2) that the project's visual impacts could be significantly reduced by omitting development on the steep south facing slope (namely the proposal's two rows of three-story homes whose height could exceed 36' based on the County's method of calculation) since water tower hill is one of the highest points in the area and is visible from numerous areas, raising scenic corridor concerns that were not adequately addressed or mitigated in the EIR.”

Gail,

Thanks for your comments. The PC minutes are always "action" minutes rather than verbatim or other type of minutes. They are brief and cover just the action and speaker list. We have disks available for anyone who might want a copy of the full discussion. To address your concern, would it help to reference the available disk and note that a suggested revised project drawing was submitted at the hearing? It would therefore alert the reader that there is additional information available if someone wants it.

Lisa

Gail,

Thanks for your comments. The PC minutes are always "action" minutes rather than verbatim or other type of minutes. They are brief and cover just the action and speaker list. We have disks available for anyone who might want a copy of the full discussion. To address your concern, would it help to reference the available disk and note that a suggested revised project drawing was submitted at the hearing? It would therefore alert the reader that there is additional information available if someone wants it.

Lisa

Lise and Rosario,

In preparation for the PC's Jan13th meeting, have reviewed the draft December 9, 2009 minutes, and note that on Item 6 (Ascension Heights) at pages 9 – 10, there is only the most a barebones statement of the denial, that does not appear to reflect the full motion or key aspects of the discussion for context that I believe is necessary.

For starters, the motion itself had included a 5th, positive element to the following effect which was not included in the draft minutes (I hope you can confirm using whatever tape of the meeting you have – Here's my best recollection):

Please insert after Item 4 on page 10:

"The Planning Commission also encouraged the applicant to conduct a further meeting with the surrounding community to seek an alternative design that does not build on the steep south-facing slope of the site, and directed staff to assist as appropriate."

Also, I note that there is no statement at all about the basis for the denial. Not sure if that should go into the minutes (I would prefer it), or into a staff report to the Supervisors, but it would certainly be good for the Supervisors to see. Ideally something that would capture the major points, something like the following could be inserted below the section above:

“Among the bases for the Planning Commissions’ findings were (1) that the project was not in conformance with General Plan Section \_\_\_ to the degree it would create new parcels and allow new building on a slope over of 40% (when the GP’s maximum buildable slope is 30%), (2) that the project was not in conformance with General Plan Section \_\_\_ to the degree that steep south slope has geotechnical concerns for potential ground instability and erosion that could affect existing homes below [CITE TO THE TWO GP SECTIONS DAVE BOMBERGER CITED TO IN HIS ORAL COMMENTS THAT NIGHT – SHOULD BE ON THE TAPE OR YOU CAN EMAIL DAVE – I don’t have mu notes here at work], (2) that air quality impacts could be reduced by omitting development on the steep south slope thus minimizing the amount of soil removal and truck trips that would necessary, as well as (2) that the project’s visual impacts could be significantly reduced by omitting development on the steep south facing slope (namely the proposal’s two rows of three-story homes whose height could exceed 36’ based on the County’s method of calculation) since water tower hill is one of the highest points in the area and is visible from numerous areas, raising scenic corridor concerns that were not adequately addressed or mitigated in the EIR.”

Commissioner Slocum distributed an illustrative drawing depicting a potential redesign that could provide for development of homes on the flatter areas of the site, along the lines of Alternatives B and D in the EIR, combined with elements of the applicant’s proposal. Commissioner Slocum noted that this type of redesign, which would not create parcels \_\_\_ - \_\_\_ on the steep south facing slope, would appear to avoid most of the proposal’s significant impacts and would address almost all of the community’s remaining major concerns, yet allow for development of approximately 18 – 19 new homes plus a tot lot, a walking trail and add storm drainage to address the two deep erosion gullies. [Perhaps James can fill in the numbers of the lots that the illustrative map omitted – I don’t have my Ascension EIR here with me at work today]

Finally, I would like my illustrative drawing to be part of the record – is it appropriate to attach it to the minutes to accomplish that goal?

I apologize for having to leave blanks, but I wanted to get this to you as soon as possible today and I didn’t have my Ascension Heights file at work with me. Please call me if there are questions or you have other ideas for how to capture these concepts.

I am hopeful that Rosario can provide me with an email attaching a redlined redraft of the minutes reflecting the above as you all see most fit, that also fills in the blanks in my draft. That way I can double check at home tomorrow night.

Hope that is helpful.

Thanks,

Lise

Yes, I understand that generally our PC minutes have been "action minutes" but I recall with Sand Hill and some others that there were sometimes additional mentions as necessary.

This may be one of those circumstances too.

Certainly referencing the verbatim disks as well as fixing the minutes to reflect that one portion of the motion that was adopted that wasn't reflected seems necessary as it was an "action". To the degree the action was based on the stated considerations in terms of the main rounds for denial, wouldn't it be more convenient and possibly in the County's best interests to capture something in the minutes themselves, from a legal perspective? (Also, from the perspective of the \*Supervisors\* where there is an appeal -- which I understand there is here - provision of a brief statement of the main grounds like I took a shot at below, as including the key handout (my illustrative drawing), provides you with something that can be included in the packet when it goes up on appeal, whether it's in the minutes or in the staff report.

Thanks for your consideration,

Gail Slocum

Lise

Yes, I understand that generally our PC minutes have been “action minutes” but I recall with Sand Hill and some others that there were sometimes additional mentions as necessary.

This may be one of those circumstances too.

Certainly referencing the verbatim disks as well as fixing the minutes to reflect that one portion of the motion that was adopted that wasn't reflected seems necessary as it was an “action”. To the degree the action was based on the stated considerations in terms of the main rounds for denial, wouldn't it be more convenient and possibly in the County's best interests to capture something in the minutes themselves, from a legal perspective? (Also, from the perspective of the **\*Supervisors\*** where there is an appeal -- which I understand there is here -- provision of a brief statement of the main grounds like I took a shot at below, as including the key handout (my illustrative drawing), provides you with something that can be included in the packet when it goes up on appeal, whether it's in the minutes or in the staff report.

Thanks for your consideration,

*Gail Slocum*

**To:** Slocum, Gail; Rosario Fernandez  
**Cc:** James Castaneda; Jim Eggemeyer; John Nibbelin  
**Subject:** Re: Gail Slocum's Comments on Draft PC Minutes for December 9, 2009 Meeting (Ascension Heights)

Gail,

Thanks for your comments. The PC minutes are always "action" minutes rather than verbatim or other type of minutes. They are brief and cover just the action and speaker list. We have disks available for anyone who might want a copy of the full discussion. To address your concern, would it help to reference the available disk and note that a suggested revised project drawing was submitted at the hearing? It would therefore alert the reader that there is additional information available if someone wants it.

Lisa

>>> "Slocum, Gail" < 1/11/2010 3:28 PM >>>

Lise and Rosario,

In preparation for the PC's Jan13th meeting, have reviewed the draft December 9, 2009 minutes, and note that on Item 6 (Ascension Heights) at pages 9 – 10, there is only the most a barebones statement of the denial, that does not appear to reflect the full motion or key aspects of the discussion for context that I believe is necessary.

For starters, the motion itself had included a 5th, positive element to the following effect which was not included in the draft minutes (I hope you can confirm using whatever tape of the meeting you have – Here's my best recollection):

Please insert after Item 4 on page 10:

“The Planning Commission also encouraged the applicant to conduct a further meeting with the surrounding community to seek an alternative design that does not build on the steep south-facing slope of the site, and directed staff to assist as appropriate.”

Also, I note that there is no statement at all about the basis for the denial. Not sure if that should go into the minutes (I would prefer it), or into a staff report to the Supervisors, but it would certainly be good for the Supervisors to see. Ideally something that would capture the major points, something like the following could be inserted below the section above:

“Among the bases for the Planning Commissions' findings were (1) that the project was not in conformance with General Plan Section \_\_\_ to the degree it would create new parcels and allow new building on a slope over of 40% (when the GP's maximum buildable slope is 30%), (2) that the project was not in conformance with General Plan Section \_\_\_ to the degree that steep south slope has geotechnical concerns for potential ground instability and erosion that could affect existing homes below [CITE TO THE TWO GP SECTIONS DAVE BOMBERGER CITED TO IN HIS ORAL COMMENTS THAT NIGHT – SHOULD BE ON THE TAPE OR YOU CAN EMAIL DAVE – I don't have mu notes here at work], (2) that air quality impacts could be reduced by omitting development on the steep south slope thus minimizing the amount of soil removal and truck trips that would necessary, as well as (2) that the project's visual impacts could be significantly reduced by omitting development on the steep south facing slope (namely the proposal's two rows of three-story homes whose height could exceed 36' based on the County's method of calculation) since water tower hill is one of the highest points in the area and is visible from numerous areas, raising scenic corridor concerns that were not adequately addressed or mitigated in the EIR.”

Commissioner Slocum distributed an illustrative drawing depicting a potential redesign that could provide for development of homes on the flatter areas of the site, along the lines of Alternatives B and D in the EIR, combined with elements of the applicant's proposal. Commissioner Slocum noted that this type of redesign, which would not create parcels \_\_\_ - \_\_\_ on the steep south facing slope, would appear to avoid most of the proposal's significant impacts and would address almost all of the community's remaining major concerns, yet allow for development of approximately 18 – 19 new homes plus a tot lot, a walking trail and add storm drainage to address the two deep erosion gullies. [Perhaps James can fill in the numbers of the lots that the illustrative map omitted – I don't have my Ascension EIR here with me at work today]

Finally, I would like my illustrative drawing to be part of the record – is it appropriate to attach it to the minutes to accomplish that goal?

I apologize for having to leave blanks, but I wanted to get this to you as soon as possible today and I didn't have my Ascension Heights file at work with me. Please call me if there are questions or you have other ideas for how to capture these concepts.

I am hopeful that Rosario can provide me with an email attaching a redlined redraft of the minutes reflecting the above as you all see most fit, that also fills in the blanks in my draft. That way I can double check at home tomorrow night.

Hope that is helpful.

Thanks,

*Gail Slocum*

Rosario

Thanks for the work you and Jim did on this. I thought it should say more about the basis for our unanimous denial, so I have added some suggestions highlighted in yellow for Jim to take a look at. Since this has been appealed, I figured the Supervisors should see more than just the bare minimum on why we denied, and I would think this would tend to protect the County's interests more strongly as well.

Thanks,

Gail Slocum

## Action Minutes

MEETING NO. 1499

Wednesday, December 9, 2009

At College of San Mateo Theatre, located at 1700 West Hill Road, San Mateo

Vice-Chair Bomberger called the meeting to order at 7:10 p.m.

1. **Pledge of Allegiance:** The Pledge of Allegiance recited by Vice-Chair Bomberger.
2. **Roll Call:** Commissioners Present: Bomberger, Slocum, Wong  
Commissioners Absent: Ranken  
Staff Present: Grotz, Nibbeling, Shu

Legal notice published in the San Mateo County Times on November 28, 2009.

3. **Oral Communications:** The public address the Commission on any matter not on the agenda.

None.

4. **Consideration of the Minutes** of the Planning Commission meeting of November 18, 2009, 2009.

Commissioner Dworetzky moved, and Commissioner Slocum seconded, that the minutes be approved as submitted. Motion carried **4-0-0-1(Commissioner Ranken absent)**.

*Commissioner Wong moved for approval of the Consent Agenda, Item 5, and Commissioner Slocum seconded the motion. Motion carried 4-0-0-1(Commissioner Ranken absent), approving items as follows:*

### CONSENT AGENDA

- 5. **Owners/Applicants:** **John and Maureen Giusti**  
 File No.: PLN2008-00077  
 Location: 318 Verde Road, Half Moon Bay  
 Assessor's Parcel No.: 066-270-020

Consideration of a Coastal Development Permit and a Planned Agricultural District Permit for Farm Labor Housing, pursuant to Sections 6328.4 and 6353, respectively, of the San Mateo County Zoning Regulations, and certification of a Mitigated Negative Declaration, pursuant to the California Environmental Quality Act, to allow the construction of a new 2,740 sq.ft. modular home to be used as a farm labor housing unit, a new septic system and legalization of an existing ranch complex used as two Farm Labor Housing Units, located at 318 Verde Road in the unincorporated Half Moon Bay area of San Mateo County. This project is appealable to the California Coastal Commission. Application filed March 6, 2008. PROJECT PLANNER: Stephanie Skangos Telephone: (650)363-1814

Attachment A

County of San Mateo  
 Planning and Building Department

**FINDINGS AND CONDITIONS OF APPROVAL**

Permit or Project File Number: PLN 2008-00077      Hearing Date: December 9, 2009  
 Prepared By: Stephanie Skangos, Project Planner      Adopted By: Planning Commission

**FINDINGS**

Regarding the Negative Declaration:

1. That the Negative Declaration is complete, correct and adequate and prepared in accordance with the California Environmental Quality Act and applicable State and County guidelines. The public review period for this document was April 9, 2009 to April 29, 2009.
2. That on the basis of the Initial Study, comments received hereto, and testimony presented and considered at the public hearing, there is no substantial evidence that the project will have a significant effect on the environment. The Initial Study/Negative Declaration does not identify any other cumulative impacts associated with this project.
3. That the Negative Declaration reflects the independent judgment of San Mateo County. The Negative Declaration was prepared by the project planner.
4. That the mitigation measures in the Mitigated Negative Declaration and agreed to by the owner and placed as conditions on the project have been incorporated into the Mitigation Monitoring and Reporting Plan in conformance with the California Public Resources Code Section 21081.6.

Regarding the Coastal Development Permit, Found:

5. That the project, as described in the application and accompanying materials required by Section 6328.7 and as conditioned in accordance with Section 6328.14, conforms with the plans, policies, requirements and standards of the San Mateo County Local Coastal Program (LCP) as the plans and materials have been reviewed against the application requirements, staff has completed an LCP Policy Checklist, and the project has been conditioned in accordance with the Locating and Planning New Development, Agriculture, Sensitive Habitats and Visual Resources Components of the Local Coastal Program.
6. The project conforms to the specific findings required by the policies of the LCP with regard to the Locating and Planning New Development, Agriculture, Sensitive Habitats and Visual Resources Components. Specifically, the project conforms with the policies and uses and conversion of prime agricultural land designated as agriculture and the criteria for rural parcels located within State and County Scenic Corridors.

Regarding the Planned Agricultural District Permit, Found:

7. That the proposed project, as described in the application and accompanying materials, complies with all applicable criteria for issuance of a Planned Agricultural District (PAD) Permit contained in Section 6355 of the County Zoning Regulations. The project complies with the criteria, as there are no alternative locations on the site for the proposed structures since the entire site consists of prime soils and is currently being used for agricultural production, including the cultivation of Brussels sprouts and peas and the grazing of livestock. The location of the proposed farm labor housing units are within an existing developed agricultural center, which is not used for agricultural production, nor is it viable for such use. As the agricultural center is set apart and distinguished from the location of agricultural production on the property, implementation of the new farm labor housing unit and legalization of the existing ranch house duplex as a farm labor housing unit will not decrease the current production or affect the potential for future agricultural use of the site. Water supplies for agricultural production on the property are not diminished by implementation of the new farm labor housing unit, as water is to be obtained from Purissima which domestic water rights have been obtained.
8. That the proposed project, as described in the application and accompanying materials, complies with the procedural criteria for issuance of a PAD Permit contained in Section 6361 of the County Zoning Regulations. An agricultural land management plan has been submitted in connection with the project, reviewed by staff and found to be compliance with the requirements and criteria of the PAD Zoning District.

**CONDITIONAL APPROVAL**

Current Planning Section

1. This approval applies only to the proposal, documents and plans described in this report and submitted to and approved by the Planning Commission on December 9, 2009. Minor revisions

or modifications may be approved by the Community Development Director if they are consistent with the intent and in substantial conformance with this approval.

2. The permits shall be valid for a five-year period and will expire on December 9, 2014. If the applicant or owner wants to renew the permit, he or she shall submit a complete permit renewal application form to the Planning and Building Department at least six months prior to the date of expiration.
3. The PAD Permit is subject to two administrative reviews in December 2010 and December 2012, to ensure compliance with the conditions of approval. The applicant shall submit signed "certification of farm labor housing eligibility" forms, which demonstrate that the occupants are bona fide farm laborers and their dependents.
4. The Current Planning Section staff may, upon the recommendation of the Agricultural Advisory Committee, elect to conduct additional reviews beyond the above required administrative review. At that time, the applicant shall submit documentation to the satisfaction of the Community Development Director, which demonstrates that the occupants are bona fide farm laborers. Failure to submit such documentation may result in a permit hearing to consider revocation of this permit.
5. To the extent that there is any conflict between the San Mateo County Ordinance Code and the Conservation Easement Agreement entered into with the Peninsula Open Space Trust, the provisions of the San Mateo County Zoning Ordinance shall take precedence over such agreement.
6. If the applicant applies for a PAD permit to construct a future permanent residence, the applicant shall concurrently resubmit an application for farm labor housing to the farm labor housing Certificate of Need Committee and the Agricultural Advisory Committee for their recommendation regarding approval.
7. The farm labor housing units shall only be occupied by farm workers and their families.
8. The new modular home or housing unit shall have no permanent foundation in accordance with adopted County Policy.
9. A new operator, a change in operations, or a proposed increase in the number of units requires that the applicant (or the new operator) shall apply for and receive a new Certificate of Need if the units will continue to be utilized.
10. At the termination of the permit for farm labor housing, the modular home and supporting utilities shall be removed from the temporary homesite and the applicant shall confirm in writing to the Community Development Director that the unit has been removed.
11. In the event that the ranch house is no longer needed for farm laborers, the structure shall either be converted to a non-habitable use or be used as the primary residence on the property, subject to all applicable building and zoning regulations and application requirements.

## PLANNING COMMISSION MINUTES

- 5 -

December 9, 2009

12. The applicant shall apply for and be issued a building permit prior to the start of installation of the farm labor housing unit.
13. The applicant shall comply with all requirements of the San Mateo County Geotechnical Section during the building permit phase of the project.
14. A Certificate of Compliance Type A shall be recorded to legalize the subject parcel prior to the issuance of a building permit for the new FLH unit for this project.
15. Prior to the beginning of any construction or grading activities, the applicant shall implement an approved erosion and sediment control plan. Erosion control measure deficiencies, as they occur, shall be immediately corrected. The goal is to prevent sediment and other pollutants from leaving the project site and to protect all exposed earth surfaces from erosive forces. Said plan shall adhere to the San Mateo Countywide Stormwater Pollution Prevention Program "General Construction and Site Supervision Guidelines," including:
  - a. Stabilizing all denuded areas and maintaining erosion control measures continuously between October 15 and April 15. Stabilizing shall include both proactive measures, such as the placement of hay bales or coir netting, and passive measures, such as revegetating disturbed areas with plants propagated from seed collected in the immediate area.
  - b. Storing, handling, and disposing of construction materials and wastes properly, so as to prevent their contact with stormwater.
  - c. Controlling and preventing the discharge of all potential pollutants, including pavement cutting wastes, paints, concrete, petroleum products, chemicals, wash water or sediments, and non-stormwater discharges to storm drains and watercourses.
  - d. Using sediment control filtration to remove sediment when dewatering the site and obtaining necessary permits.
  - e. Avoiding refueling and maintaining vehicles on-site, except in a designated area where waste is contained and treated.
  - f. Demarcating with markers clearing limits, easements, setbacks, sensitive or critical areas, buffer zones, ditches, and drainage courses.
  - g. Protecting adjacent properties and undisturbed areas from construction impacts using vegetative buffer strips, sediment barriers or filters, dikes, mulching, or other measures as appropriate.
  - h. Performing clearing and earth-moving activities only during dry weather.
  - i. Limiting and timing applications of pesticides and fertilizers to prevent polluted runoff.
  - j. Limiting construction access routes and stabilizing designated access points.

## PLANNING COMMISSION MINUTES

- 6 -

December 9, 2009

- k. Avoiding tracking dirt or other materials off-site; cleaning off-site paved areas and sidewalks using dry sweeping methods.
  - l. The contractor shall train and provide instructions to all employees and subcontractors regarding the construction best management practices.
  - m. The approved erosion and sediment control plan shall be implemented prior to the beginning of construction.
16. The applicant is responsible for ensuring that all contractors are aware of all stormwater quality measures and implement such measures. Failure to comply with the construction BMPs will result in the issuance of the correction notices, citations or a project stop order.
- a. All landscaping shall be properly maintained and shall be designed with efficient irrigation practices to reduce runoff, promote surface filtration and minimize the use of fertilizers, herbicides and pesticides that can contribute to runoff pollution.
  - b. Where subsurface conditions allow, the roof downspout systems from all structures shall be designed to drain to a designated, effective infiltration area or structure (refer to BMPs Handbook for infiltration system designs and requirements).
17. The applicant shall submit a permanent stormwater management plan in compliance with the County's Drainage Policy and NPDES requirements for review and approval by the Department of Public Works.
18. Noise levels produced by construction shall not exceed the 60-dBA level at any one moment. Construction activity shall be limited to the hours from 7:00 a.m. to 6:00 p.m., Monday through Friday, and 9:00 a.m. to 5:00 p.m. on Saturday. Construction operation shall be prohibited on Sunday and any national holidays.
19. The applicant shall use colors and materials for the proposed farm labor housing unit that blend in with and complement the surrounding natural environment. The applicant shall submit the proposed colors and materials to the Planning Department for review and approval. Prior to final Planning approval of the building permit for this project, the applicant shall submit photos of the completed structure to the Planning Department to verify that the approved colors and materials have been implemented.
20. Proposed new utility lines shall be installed underground from the nearest existing utility pole.
21. All exterior and interior lighting for the approved unit shall be designed and located so as to conform to the subject property and prevent glare in the surrounding area. Proposed lighting shall be reviewed and approved by the Planning Department during the building permit process to verify compliance with this condition.
22. The applicant shall submit a landscaping plan at the time of the building permit application for review and approval by the Planning Department. The landscaping plan shall include natural screening to minimize the visibility of the approved structure from the adjacent scenic roadways. Prior to final Planning approval of the building permit for this project, the applicant shall submit

photos of the completed landscaping to the Planning Department to verify that the approved landscaping plan has been implemented.

- 23. No trees are permitted to be removed as part of this approval. If any tree is proposed for removal, the applicant shall be required to obtain approval of a tree removal permit for the proposed removal of any tree with a diameter greater than 12 inches as measured 4.5 feet above the ground.
- 24. Any existing significant and heritage trees adjacent to construction areas shall be protected. The applicant shall establish and maintain tree protection zones which shall be delineated using a 4-foot tall orange plastic fencing supported by poles pounded into the ground located as close to the tree driplines as possible while still allowing room for construction to safely continue. The applicant shall maintain tree protection zones free of equipment and material storage and shall not clean any equipment within these areas. Should any large roots or masses of roots need to be cut, the roots shall be inspected by a certified arborist prior to cutting. Any root cutting shall be monitored by an arborist and documented.

**Building Inspection**

- 25. A building permit shall be required for all new development.
- 26. Fire sprinklers shall be required.

Environmental Health Department

- 27. At the building application stage of the farm labor unit, the applicant shall obtain a permit to install the septic system meeting Environmental Health Standards.

**Department of Public Works**

- 28. A drainage plan shall be submitted during the building permit stage.

**Coastal Fire Protection District**

- 29. Addressing: Existing structures are required to have a contrasting 4" high address sign on the structure facing the direction of fire access (Verde/Purissima Creek). The new structure will require an internally illuminated address sign with 4" contrasting letters. Due to the setback from the street an additional reflective address sign shall be installed at the street/driveway entrance. The sign shall be 911 16" x 8" reflective green with white 3" letters or equivalent.
- 30. Road leading to the new structure will require a minimum of 6" of compacted Class II base rock engineered to support the imposed load of the fire apparatus. This road will be a minimum of 20' wide for Verde to the structure.
- 31. The new structure is required to have smoke detectors installed in every bedroom, and in the corridor outside the bedrooms. These smoke detectors will be hardwired, interconnected and have battery backup.

- 32. Water supply: The new structure will be required to have a Draft Hydrant installed, fed from a minimum 7,000 gallon water tank. See the Coastside Fire District standard for installation details.
- 33. This residential structure will be required to be equipped with a NFPA 13D Fire Sprinkler system.

**END OF THE CONSENT AGENDA**

**REGULAR AGENDA  
7:00p.m.**

- 6. **Owner:** John O'Rourke  
**Applicant:** San Mateo Real Estate and Construction  
**File No.:** PLN2002-00517  
**Location:** San Mateo Highlands  
**Assessor's Parcel Nos:** 041-111-130; 041-111-131; 041-111-270; 041-111-280; 041-111-320  
 And 041-111-360

Consideration of a Major Subdivision, pursuant to Section 8600 of the County Subdivision Ordinance and the State Subdivision Map Act, grading permit, pursuant Section 8600 of the San Mateo County Ordinance Code, and certification of Final Environmental Impact Report (FEIR), pursuant to the California Environmental Quality Act (CEQA) for the proposed Ascension Heights Subdivision located in the unincorporated San Mateo Highlands area of San Mateo County. The project includes the subdivision of the 13.2-acre subject site into 27 legal parcels for development of 25 single-family dwellings, a landscaped conservation area (lot A), and "tot-lot" (lot B), which includes a main private access road, and an emergency Vehicle Access road to provide additional fire access. The project site is bounded from the north by Loma Vista Road north of Ascension Drive. Application filed August 28, 2002. PROJECT NUMBER: 00517. PROJECT LEADER: James A. Castañeda. Telephone: 650/363-1853.

Draft

**COMMISSION ACTION**

Commissioner Slocum moved and Commissioner Wong seconded to close the public hearing. Motion carried 4-0-0-1(*Commissioner Ranken absent*).

Re-open the public hearing after a short break: Commissioner Bomberger moved and Commissioner Slocum seconded to re-open the public hearing again. Motion carried 4-0-0-1(*Commissioner Ranken absent*) to hear additional comments and responses to questions. Commissioner Slocum moved and Commissioner Wong seconded to close the second public hearing. Motion carried 4-0-0-1(*Commissioner Ranken absent*).

After receiving answers to questions from staff and the application, the Commissioners expressed various concerns that had not been overcome by the information on which a decision must be made. Primary among these were Commissioner Bomberger's and Slocum's concern that the project as proposed was requesting the creation of new subdivision for lots that did not appear to conform with General Plan Policy 15.20 (to whenever possible avoid construction on steeply (greater than 30%) sloping areas (which had been shown to be a significant impact under the DEIR). The Commissioners, including Commissioner Wong, expressed a related concern regarding geotechnical and drainage/erosion impacts from building over a 5 year period on these proposed lots. Commissioner Slocum also expressed concerns about General Plan provisions regarding visual impacts in scenic corridors, which could be seen as resulting from building numerous 3-story buildings of over 36 feet in total height on the proposed lots the steep south facing slope.

Commissioner Slocum moved and Commissioner Wong seconded the following motion below. Motion carried 4-0-1 (Commissioner Ranken absent).

Based on information provided by staff and evidence presented at the hearing, the Planning Commission denied (4-0) the following:

1. A resolution certifying the Final Environmental Impact Report (FEIR) as complete, correct and adequate and prepared in accordance with CEQA.
2. A resolution adopting a Statement of Overriding Considerations.
3. A resolution adopting the Mitigation Monitoring Report and the Statement of Findings and Facts in Support of Findings.
4. The vesting tentative map for the major subdivision, the grading permit, and the removal of four significant trees, making retaining walls and adopting the conditions of approval as set forth in Attachment A.

The Planning Commission also directed the applicant to meet with the community to seek a design that does not build on the steep south facing slope of the site and directed staff to assist as appropriate.

In addition, to provide guidance to the applicant to aid in any further efforts to modify the proposal, the Planning Commission encouraged the applicant to: 1) provide more moderate-sized housing, 2) address the concerns about avoiding building on the steep south facing slope, and 3) develop a new design that could minimize negative impacts.

Commissioner Slocum distributed an illustrative drawing depicting a potential approach to a redesign that would appear to avoid the significant impacts and address many of the remaining concerns expressed by the community by avoiding development and new roads and retaining walls on the steep south facing slope but yet allow for development of approximately 18 – 19 homes on more modest sized lots on the flatter areas of the site. (See attached.)

7 **Correspondence and Other Matters**

Director Grote reported that she will be attending the Coastal Commission meeting in San Francisco along with other staff from Long Range including Steve Monowitz and County Counsel John Nibbelin

8. **Consideration of Study Session for Next Meeting**

Director Grote reported the next Study Session will be on January 27, 2010 from 8-9 a.m. and if needed after the regular meeting.

9. **Director's Report**

1. December 1, 2009 the Board of Supervisors approved the final recommendations on the Local Coastal Program Update.
2. Two meetings will be held in January next year, January 13 (Highlands) and January 27, 2010 (Housing Element and other items).

10. **Adjournment**

The meeting adjourned at 11:15 p.m.

Rosario

Thanks for the work you and Jim did on this. I thought it should say more about the basis for our unanimous denial, so I have added some suggestions highlighted in yellow for Jim to take a look at. Since this has been appealed, I figured the Supervisors should see more than just the bare minimum on why we denied, and I would think this would tend to protect the County's interests more strongly as well.

Thanks,

Gail Slocum

### Planning & Building Department Planning Commission

William Wong, 1st District  
David Bomberger, 2nd District  
Chris Ranken, 3rd District  
Gail Slocum, 4th District  
Steve Dworetzky, 5th District

County Office Building  
455 County Center  
Redwood City, California 94063  
(650) 363-1859

## Action Minutes

MEETING NO. 1499

Wednesday, December 9, 2009

At College of San Mateo Theatre, located at 1700 West Hill Road, Boulevard, San Mateo

Vice-Chair Bomberger called the meeting to order at 7:10 a.m.

1. **Pledge of Allegiance:** The Pledge of Allegiance led by Vice-Chair Bomberger.
2. **Roll Call:** Commissioners Present: Bomberger, Ranken, Slocum, Wong  
Commissioners Absent: Dworetzky  
Staff Present: Grote, Nibbeling, Shu

Legal notice published in the San Mateo County Times on November 28, 2009.

3. **Oral Communications:** The public address the Commission on any matter not on the agenda.

None.

4. **Consideration of the Minutes:** of the Planning Commission meeting of November 18, 2009, 2009.

Commissioner Dworetzky moved, and Commissioner Slocum seconded, that the minutes be approved as submitted. Motion carried **4-0-0-1**(*Commissioner Ranken absent*).

*Commissioner Dworetzky moved for approval of the Consent Agenda, Item 5, and Commissioner Slocum seconded the motion. Motion carried 4-0-0-1(Commissioner Ranken absent), approving items as follows:*

### CONSENT AGENDA

- 5. **Owners/Applicants:** **John and Maureen Giusti**  
 File No.: PLN2008-00077  
 Location: 318 Verde Road, Half Moon Bay  
 Assessor's Parcel No.: 066-270-020

Consideration of a Coastal Development Permit and a Planned Agricultural District Permit for Farm Labor Housing, pursuant to Sections 6328.4 and 6353, respectively, of the San Mateo County Zoning Regulations, and certification of a Mitigated Negative Declaration, pursuant to the California Environmental Quality Act, to allow the construction of a new 2,740 sq.ft. modular home to be used as a farm labor housing unit, a new septic system and legalization of an existing beach complex used as two Farm Labor Housing Units, located at 318 Verde Road in the unincorporated Half Moon Bay area of San Mateo County. This project is appealable to the California Coastal Commission. Application filed March 6, 2008. PROJECT PLANNER: Stephanie Skangos Telephone: (415) 363-1814

Attachment A

County of San Mateo  
 Planning and Building Department

**FINDINGS AND CONDITIONS OF APPROVAL**

Permit or Project File Number: PLN 2008-00077      Hearing Date: December 9, 2009

Prepared By: Stephanie Skangos, Project Planner      Adopted By: Planning Commission

**FINDINGS**

**Regarding the Negative Declaration**

1. That the Negative Declaration is complete, correct and adequate and prepared in accordance with the California Environmental Quality Act and applicable State and County guidelines. The public review period for this document was April 9, 2009 to April 29, 2009.
2. That on the basis of the Initial Study, comments received hereto, and testimony presented and considered at the public hearing, there is no substantial evidence that the project will have a significant effect on the environment. The Initial Study/Negative Declaration does not identify any cumulative impacts associated with this project.
3. That the Negative Declaration reflects the independent judgment of San Mateo County. The Negative Declaration was prepared by the project planner.
4. That the mitigation measures in the Mitigated Negative Declaration and agreed to by the owner and placed as conditions on the project have been incorporated into the Mitigation Monitoring and Reporting Plan in conformance with the California Public Resources Code Section 21081.6.

Regarding the Coastal Development Permit, Found:

- 5. That the project, as described in the application and accompanying materials required by Section 6328.7 and as conditioned in accordance with Section 6328.14, conforms with the plans, policies, requirements and standards of the San Mateo County Local Coastal Program (LCP) as the plans and materials have been reviewed against the application requirements, staff has completed an LCP Policy Checklist, and the project has been conditioned in accordance with the Locating and Planning New Development, Agriculture, Sensitive Habitats and Visual Resources Components of the Local Coastal Program.
- 6. The project conforms to the specific findings required by the policies of the LCP with regard to the Locating and Planning New Development, Agriculture, Sensitive Habitats and Visual Resources Components. Specifically, the project conforms with the proposed uses and conversion of prime agricultural land designated as agriculture and the criteria for rural parcels located within State and County Scenic Corridors.

Regarding the Planned Agricultural District Permit, Found:

- 7. That the proposed project, as described in the application and accompanying materials, complies with all applicable criteria for issuance of a Planned Agricultural District (PAD) Permit contained in Section 6355 of the County Zoning Regulations. The project complies with the criteria, as there are no alternative locations on the parcel for the proposed structures since the entire site consists of prime soils and is currently being used for agricultural production, including the cultivation of Brussels sprouts and peas and the grazing of livestock. The location of the proposed farm labor housing units is within an existing developed agricultural center, which is not used for agricultural production, nor is it viable for such use. As the agricultural center is set apart and distinguished from the location of agricultural production on the property, implementation of the new farm labor housing unit and legalization of the existing ranch house duplex as a labor housing unit will not decrease the current production or affect the potential for future agricultural use of the property. Water supplies for agricultural production on the property are not diminished by implementation of the new farm labor housing unit, as water is to be obtained from Purissima Creek, which domestic water rights have been obtained.
- 8. That the proposed project, as described in the application and accompanying materials, complies with the procedural criteria for issuance of a PAD Permit contained in Section 6361 of the County Zoning Regulations. An agricultural land management plan has been submitted in connection with the project, reviewed by staff and found to be compliance with the requirements and criteria of the PAD Zoning District.

CONDITIONAL APPROVAL

Current Planning Section

- 1. This approval applies only to the proposal, documents and plans described in this report and submitted to and approved by the Planning Commission on December 9, 2009. Minor revisions or modifications may be approved by the Community Development Director if they are consistent with the intent and in substantial conformance with this approval.

## PLANNING COMMISSION MINUTES

- 4 -

December 9, 2009

2. The permits shall be valid for a five-year period and will expire on December 9, 2014. If the applicant or owner wants to renew the permit, he or she shall submit a complete permit renewal application form to the Planning and Building Department at least six months prior to the date of expiration.
3. The PAD Permit is subject to two administrative reviews in December 2010 and December 2012, to ensure compliance with the conditions of approval. The applicant shall submit signed "certification of farm labor housing eligibility" forms, which demonstrate that the occupants are bona fide farm laborers and their dependents.
4. The Current Planning Section staff may, upon the recommendation of the Agricultural Advisory Committee, elect to conduct additional reviews beyond the above and administrative review. At that time, the applicant shall submit documentation to the satisfaction of the Community Development Director, which demonstrates that the occupants are bona fide farm laborers. Failure to submit such documentation may result in a public hearing to consider revocation of this permit.
5. To the extent that there is any conflict between the San Mateo County Ordinance Code and the Conservation Easement Agreement entered into with the Peninsula Open Space Trust, the provisions of the San Mateo County Zoning Ordinance shall take precedence over such agreement.
6. If the applicant applies for a PAD Permit to construct a permanent residence, the applicant shall concurrently resubmit an application for farm labor housing to the farm labor housing Certificate of Need Committee and the Agricultural Advisory Committee for their recommendation regarding renewal.
7. The farm labor housing unit shall only be occupied by farm workers and their families.
8. The new modular farm labor housing unit shall have no permanent foundation in accordance with adopted County codes.
9. A new operator, a change in operations, or a proposed increase in the number of units requires that the applicant (or the new operator) shall apply for and receive a new Certificate of Need if the unit will continue to be utilized.
10. At the time of termination of the permit for farm labor housing, the modular home and supporting utilities shall be removed from the temporary homesite and the applicant shall confirm in writing to the Community Development Director that the unit has been removed.
11. In the event that the ranch house is no longer needed for farm laborers, the structure shall either be converted to a non-habitable use or be used as the primary residence on the property, subject to all applicable building and zoning regulations and application requirements.
12. The applicant shall apply for and be issued a building permit prior to the start of installation of the farm labor housing unit.

## PLANNING COMMISSION MINUTES

- 5 -

December 9, 2009

13. The applicant shall comply with all requirements of the San Mateo County Geotechnical Section during the building permit phase of the project.
14. A Certificate of Compliance Type A shall be recorded to legalize the subject parcel prior to the issuance of a building permit for the new FLH unit for this project.
15. Prior to the beginning of any construction or grading activities, the applicant shall implement an approved erosion and sediment control plan. Erosion control measure deficiencies, as they occur, shall be immediately corrected. The goal is to prevent sediment and other pollutants from leaving the project site and to protect all exposed earth surfaces from erosive forces. Said plan shall adhere to the San Mateo Countywide Stormwater Pollution Prevention Program "General Construction and Site Supervision Guidelines," including:
  - a. Stabilizing all denuded areas and maintaining erosion control measures continuously between October 15 and April 15. Stabilizing shall include both passive measures, such as the placement of hay bales or coir netting, and active measures, such as vegetating disturbed areas with plants propagated from seed collected in the immediate area.
  - b. Storing, handling, and disposing of construction materials and wastes properly, so as to prevent their contact with stormwater.
  - c. Controlling and preventing the discharge of potential pollutants, including pavement cutting wastes, paints, concrete, petroleum products, chemicals, wash water or sediments, and non-stormwater discharges to storm drains and drainage courses.
  - d. Using sediment controls or filtration to remove sediment when dewatering the site and obtaining all necessary permits.
  - e. Avoiding cleaning, fueling, or maintaining vehicles on-site, except in a designated area where water is collected and treated.
  - f. Delineating field markings, including limits, easements, setbacks, sensitive or critical areas, buffer zones, trees, and drainage courses.
  - g. Protecting adjacent properties and undisturbed areas from construction impacts using vegetative buffer strips, sediment barriers or filters, dikes, mulching, or other measures as appropriate.
  - h. Performing clearing and earth-moving activities only during dry weather.
  - i. Scheduling and timing applications of pesticides and fertilizers to prevent polluted runoff.
  - j. Limiting construction access routes and stabilizing designated access points.
  - k. Avoiding tracking dirt or other materials off-site; cleaning off-site paved areas and sidewalks using dry sweeping methods.
  - l. The contractor shall train and provide instructions to all employees and subcontractors regarding the construction best management practices.

## PLANNING COMMISSION MINUTES

- 6 -

December 9, 2009

- m. The approved erosion and sediment control plan shall be implemented prior to the beginning of construction.
16. The applicant is responsible for ensuring that all contractors are aware of all stormwater quality measures and implement such measures. Failure to comply with the construction BMPs will result in the issuance of the correction notices, citations or a project stop order.
    - a. All landscaping shall be properly maintained and shall be designed with efficient irrigation practices to reduce runoff, promote surface filtration and minimize the use of fertilizers, herbicides and pesticides that can contribute to runoff pollution.
    - b. Where subsurface conditions allow, the roof downspout system from all structures shall be designed to drain to a designated, effective infiltration area on site (refer to BMPs Handbook for infiltration system designs and requirements).
  17. The applicant shall submit a permanent stormwater management plan in compliance with the County's Drainage Policy and NPDES requirements for review and approval by the Department of Public Works.
  18. Noise levels produced by construction shall not exceed the 80 dBA level at any one moment. Construction activity shall be limited to the hours of 7:00 a.m. to 5:00 p.m., Monday through Friday, and 9:00 a.m. to 5:00 p.m. on Saturday. Construction operation shall be prohibited on Sunday and any national holiday.
  19. The applicant shall use colors and materials for the proposed farm labor housing unit that blend in with and complement the surrounding natural environment. The applicant shall submit the proposed colors and materials to the Planning Department for review and approval. Prior to final Planning approval of the building permit for this project, the applicant shall submit photos of the completed landscaping to the Planning Department to verify that the approved colors and materials have been implemented.
  20. Proposed new utility lines shall be installed underground from the nearest existing utility pole.
  21. All exterior and interior lighting for the approved unit shall be designed and located so as to confine direct rays to the subject property and prevent glare in the surrounding area. Proposed lighting shall be reviewed and approved by the Planning Department during the building permit process to verify compliance with this condition.
  22. The applicant shall submit a landscaping plan at the time of the building permit application for review and approval by the Planning Department. The landscaping plan shall include natural screening to minimize the visibility of the approved structure from the adjacent scenic roadways. Prior to final Planning approval of the building permit for this project, the applicant shall submit photos of the completed landscaping to the Planning Department to verify that the approved landscaping plan has been implemented.
  23. No trees are permitted to be removed as part of this approval. If any tree is proposed for removal, the applicant shall be required to obtain approval of a tree removal permit for the

proposed removal of any tree with a diameter greater than 12 inches as measured 4.5 feet above the ground.

- 24. Any existing significant and heritage trees adjacent to construction areas shall be protected. The applicant shall establish and maintain tree protection zones which shall be delineated using a 4-foot tall orange plastic fencing supported by poles pounded into the ground, located as close to the tree driplines as possible while still allowing room for construction to safely continue. The applicant shall maintain tree protection zones free of equipment and material storage and shall not clean any equipment within these areas. Should any large roots or large masses of roots need to be cut, the roots shall be inspected by a certified arborist prior to cutting. Any root cutting shall be monitored by an arborist and documented.

**Building Inspection Section**

- 25. A building permit shall be required for all new development.
- 26. Fire sprinklers shall be required.

Environmental Health Department

- 27. At the building application stage for the farm labor unit, the applicant shall obtain a permit to install the septic system meeting Environmental Health Standards.

**Department of Public Works**

- 28. A drainage analysis shall be required during the building permit stage.

**Coastside Fire Protection District**

- 29. Addressing: Existing structures required to have a contrasting 4" high address sign on the structure in the direction of fire access (Verde/Purissima Creek). The new structure will require an illuminated address sign with 4" contrasting letters. Due to the setback from the street an additional reflective address sign shall be installed at the street/driveway entrance. This sign shall be a minimum 11 1/2" x 8" reflective green with white 3" letters or equivalent.
- 30. Road access to the new structure will require a minimum of 6" of compacted Class II base rock engineered to support the imposed load of the fire apparatus. This road will be a minimum of 20' wide for Verde to the structure.
- 31. The new structure is required to have smoke detectors installed in every bedroom, and in the common areas of the bedrooms. These smoke detectors will be hardwired, interconnected and have battery backup.
- 32. Water supply: The new structure will be required to have a Draft Hydrant installed, fed from a minimum 7,000 gallon water tank. See the Coastside Fire District standard for installation details.

- 33. This residential structure will be required to be equipped with a NFPA 13D Fire Sprinkler system.

**END OF THE CONSENT AGENDA**

**REGULAR AGENDA  
7:00p.m.**

- 6. **Owner:** John O'Rourke  
**Applicant:** San Mateo Real Estate and Construction  
**File No.:** PLN2002-00517  
**Location:** San Mateo Highlands  
**Assessor's Parcel Nos:** 041-111-130; 041-111-160; 041-111-270; 041-111-271; 041-111-320  
 And 041-111-360

Consideration of a Major Subdivision, pursuant to Section 70500 of the County Subdivision Ordinance and the State Subdivision Map Act, a Grading Permit pursuant to Section 500 of the San Mateo County Ordinance Code, and certification of a Final Environmental Impact Report (FEIR), pursuant to the California Environmental Quality Act (CEQA), for a proposed Ascension Heights Subdivision located in the unincorporated San Mateo Highlands area of San Mateo County. The project includes the subdivision of the 17.25-acre subject parcel into 27 legal parcels for development of 25 single-family dwellings, a proposed conservation area (lot A), and "tot-lot" (lot B), which includes a main private access road, and an emergency vehicle access road to provide additional fire access. The project site is accessed from Del Aire Road north of Ascension Drive. Application filed August 28, 2002. PROJECT PLANNER: James A. [redacted]. Telephone: 650/363-1853.

**COMMISSION ACTION**

Commissioner Slocum moved and Commissioner Wong seconded to close the public hearing. Motion carried 4-0-0-1 (*Commissioner Ranken absent*).

Re-open the public hearing after a short break: Commissioner Bomberger moved and Commissioner Slocum seconded to re-open the public hearing again. Motion carried 4-0-0-1 (*Commissioner Ranken absent*) to hear additional comments and responses to questions. Commissioner Slocum moved and Commissioner Wong seconded to close the second public hearing. Motion carried 4-0-0-1 (*Commissioner Ranken absent*).

After receiving answers to questions from staff and the applicant, the Commissioners expressed various concerns that had not been overcome or answered by the information on which a decision must be made. Primary among these were Commissioner Bomberger's and Slocum's concern that the project as proposed was requesting the creation of new subdivision for lots that did not appear to

conform with General Plan Policy 15.20.b. (Wherever possible, avoid construction on steeply sloping areas (generally above 30%), which had been shown to be a significant impact under the DEIR. The Commissioners, including Commissioner Wong, expressed a related concern regarding geotechnical and drainage/erosion impacts from building over a 5-year period on the proposed lots. Commissioner Slocum also expressed concerns about General Plan provisions regarding visual impacts in scenic corridors, which could be seen as resulting from building numerous 3-story buildings of over 36 feet in total height on the proposed lots on the steep south facing slope.

Commissioner Slocum moved and Commissioner Wong seconded the following motion below. Motion carried 4-0-0-1 (Commissioner Ranken absent).

Based on information provided by staff and evidence presented at the hearing, the Planning Commission denied (4-0) the following:

1. A resolution certifying the Final Environmental Impact Report (FEIR) as correct and adequate and prepared in accordance with CEQA.
2. A resolution adopting a Statement of Overriding Considerations.
3. A resolution adopting the Mitigation Monitoring Report and the Statement of Findings and Facts in Support of Findings.
4. The vesting tentative map for a major subdivision, the building permit, and the removal of four significant trees by making the findings and adopting the conditions of approval as set forth in Attachment A.

The Planning Commission's motion also directed the applicant to meet with the community to seek a design that does not build on the steep south facing slope of the site and directed staff to assist as appropriate.

In addition, to provide guidance to the applicant to aid in any further efforts to modify the proposal, the Planning Commission encouraged the applicant to: 1) provide more moderate-sized housing, 2) address the concerns about avoiding building on the steep south facing slope, and 3) develop a new design that could minimize negative impacts.

Commissioner Slocum distributed an illustrative drawing depicting a potential approach to a redesign that would appear to avoid the significant impacts identified in the Draft EIR and address many of the remaining concerns expressed by the community by avoiding development and new roads with retaining walls on the steep south facing slope but yet allow for development of approximately 18 – 19 homes on more modest sized lots on the flatter areas of the site. (See attached.)

Director Grote reported that she will be attending the Coastal Commission meeting in San Francisco along with other staff from Long Range including Steve Monowitz and County Counsel John Nibbelin

8. **Consideration of Study Session for Next Meeting**

Director Grote reported the next Study Session will be on January 27, 2010 from 8-9 a.m. and if needed after the regular meeting.

9. **Director's Report**

1. December 1, 2009 the Board of Supervisors approved the final recommendations on the Local Coastal Program Update.
2. Two meetings will be held in January next year, January 13 (Highlands) and January 27, 2010 (Housing Element and other items).

10. **Adjournment**

The meeting adjourned at 11:15 p.m.

Thanks for the work you and Jim did on this. I thought it should say more about the basis for our unanimous denial, so I have added some suggestions highlighted in yellow for Jim to take a look at. Since this has been appealed, I figured the Supervisors should see more than just the bare minimum on why we denied, and I would think this would tend to protect the County's interests more strongly as well.

Thanks,

Gail Slocum

That's great. Just have Rosario check the formatting and remove all the yellow highlighting and replace it with grey if that's how you are showing additions so the other Commissioners can more easily review.

Also, when does this item go to the Supes on appeal? Hopefully if we pass these minutes next Wednesday, it's timely enough to get these to them as well so they have a better sense of what we did and why.

Jim/Rosario

One other thing, if it's not too late, could please consider adding the following type of sentence to the expanded Ascension 12/9 minutes, specifically the new summary of discussion (right after the mentions of Bomberger, my and Wong's):

"Commissioner Dworetsky expressed concern that there appeared not to have been any recent outreach to or collaboration with the surrounding community by the applicant."

Since we included community outreach in the motion, I figured this should be mentioned above. Also, Dworetsky is otherwise not mentioned and this was his main concern (and a valid one IMHO).

Thanks

**Date:** 3/9/2010 3:07 PM  
**Subject:** Reminder Email - Ascension Heights Subdivision

Last week when you and I met to talk about the "slides" for today, we first talked about Ascension Heights Subdivision. I owed you a follow-up email for you to review with David.

The plan is to write a short BOS memo/staff report recommending the "revised" project be remanded back to the PC for consideration. The project was appealed by the applicant because the PC denied the project. The applicant has now made revisions to the project and in an effort to streamline the appeal/alternative design, we are proposing the BOS remand the project to the PC for a decision. Environmental review and project review for compliance with applicable regulations will be provided by staff and our EIR consultant for the PC's consideration.

Let me know if you have any questions.

Thanks.

jke

**Subject:** P & B News and Review - 6/21/10

Well everyone, we made it through the Budget Presentation today!! Thanks to everyone who has helped out the last few weeks pulling this together! We received "tentative" approval for the recommended budget we worked out. As I mentioned at the end of the presentation, this is a "lean" budget for "lean" times. I want to share this with you as we go forward in the next fiscal year. Cost savings, cost questions, and just the thought that we as a group need to be aware of our budget situation helps us all out in the long run. Just like our lives away from work, sometimes we need to ask ourselves how we are going to spend our money. Enough on the soap box, you know what I'm getting at. Thanks.

It has been a long time since the last P & B News and Review. I have been so busy with everything "budget, High Speed Rail, end of school year, Business Lic. Committee, and training" *stuff* that I haven't been able to check in with you all and let you know the happenings. Hopefully you have heard the word on the floor and that this email will help fill in some gaps.

A few weeks ago we had an all staff meeting and an "ER" event followed. Thanks to all who attended the staff meeting. For everyone who did not, I would like to meet with you as a small group and share with you the topics I covered with everyone else. Rosario will schedule a meeting in the near future. I started a list, but please email me and Rosario if you did not attend so we can make sure we all get a chance to go over the topics I shared. Thanks also to those who stayed to "construct" team towers. I must say, it was fun times by those who stayed there.

Then came the High Speed Rail Workshop with the BOS. We pulled it off without any problems. I think we had a good presentation by the High Speed Rail Folks, comments from the public and closed with some direction from the BOS for the upcoming BOS hearing next week. I've been attending meetings with the North Fair Oaks Community Council and their subcommittee to receive some feedback for the BOS. Matt in Long Range has been helping too, along with Will. Thanks for all the updated info!

I've also been away at some "Build It Green" training last week. I've been a certified green building professional now for two years and I needed to "re-certify" to keep the title. In light of the training programs available right now, I opted for the "advanced green building professional" and took a two day class on green building remodeling and retrofitting. Intense, two long days, but so much good information. If anyone is interested in knowing more or would like to see the instruction materials, come and talk with me.

All for now. Coming up, Board of Supervisors next Tuesday to see about remanding James' Ascension Heights/Dennis Thomas Subdivision back to the PC. Planning Commission is the following day on Wed. More on chickens coming to a unincorporated property near you!

jke

Well everyone, we made it through the Budget Presentation today!! Thanks to everyone who has helped out the last few weeks pulling this together! We received "tentative" approval for the recommended budget we worked out. As I mentioned at the end of the presentation, this is a "lean" budget for "lean" times. I want to share this with you as we go forward in the next fiscal year. Cost savings, cost questions, and just the thought that we as a group need to be aware of our budget situation helps us all out in the long run. Just like our lives away from work, sometimes we need to ask ourselves how we are going to spend our money. Enough on the soap box, you know what I'm getting at. Thanks.

Jim,

Your News reminds me that I am suppose to follow up with the topic you mentioned in the last staff meeting about Customer Survey. like I said, the form has been improved, customer has option to either print or submit online. Also, the Link for the form has been customized, meaning I worked with ISD to assign appropriate name "planning/survey" instead of long digits that system automatically generated, so staff can add this link at the end of their email to customer to allow customer fill out online. All these efforts are to help us get more customer feedbacks.

<http://www.co.sanmateo.ca.us/planning/survey>

Deb also suggested to add phrase like this

**"Please help us to serve you better and take a moment to complete our survey, just click on the link below"**

<http://www.co.sanmateo.ca.us/planning/survey>

Please review it, and let me know if you need me to send out email with new link to all staff, or otherwise.

Thanks

Annie

**Subject:** P & B News and Review - 7/6/10

Hope you all had an enjoyable fourth of July and a day off!

Last week was the week for public hearings. We had one with the Business License Committee, one with the Board of Supervisors, and the third with the Planning Commission. At the BLC, we had two minor permits with no issue and both were on consent. Done in five minutes. Given the Committee's summer schedules, we will not be meeting in July. As for the BOS, we had two items with them. The first was the High Speed Rail Project followup with a revised draft letter for the High Speed Rail Authority to consider as part of their public comment period they have on the Draft Alternatives Report. Supervisor Groom had some good comments that Matt S. captured and we issued the BOS' letter with President Gordon's signature. The second BOS item with the Dennis Thomas Project/Ascension Heights. We asked the BOS to remand the project back to the PC to consider an alternative design and revised environmental document (recirculated EIR). There were a few speakers there even though we had a very good community outreach with a letter to the residents letting them know what we were recommending to the BOS and a link to our staff report. The BOS had a few questions and then by formal action sent the project back to the PC.

At the PC hearing, we had a full agenda, starting at 9 and finished just before 2, with only two 10 minute breaks. What a day. I should have known when the first item comes off consent and lasts an hour. Didn't see that coming. Followed that with the general plan conformities (GPC) (two of them) Matt S. has been processing for the SFPUC. The first one lasted an hour (and it was on consent too), with a number of good issues brought up by the public including the current tenants (horse keeping and stables) on a portion of the property that will require their relocation. Our PC wanted more efforts by the SFPUC for the horse owners' needs. Matt's second GPC was a carry over from last month. No comment, questions, etc. and this one was over in 10 min. Next up, State of CA for a CDP out north of Montara at Grey Whale Cove State Beach. This was James' project, where Caltrans let the permit lapse and they didn't obtain an extension from us. Not much to discuss here. Follow that with Mike S.'s new CEQA checklist. We are making progress on this, but still more to do. Like go research what other Coastal Counties have done and see what we can adapt (copy) for our use. This one was continued to a date uncertain. Now the best one, the chicken ordinance. This one is now on its way to the BOS. Good work Tiare! A few speakers for and one family against. I understood the family against the ord. and their frustration. They happen to be living next door to the chicken owner from \*\*\*\*. Very good points made and we will be returning to the PC in a year with a status report on any noise/odor complaints we receive and how they were handled. And last up, Summer's Use Permit renewal for a fish processing facility in Princeton. Problems with this one focus around the number of employees on site because of the "AO" (Airport Overlay) zone limiting the number of people on site at any one time. PC continued this one to Sept. for us to do some AO research and opportunities and to allow the owner to clean up his operation and obtain permits for construction and an illegal roof enclosure.

I had a number of "take-a-ways" from the PC hearing I shared with the Planners who attended the "Post PC Evaluation" at the end of the day. Most were project specific, but one over all one I want to share with everyone is this. For all public hearing notices going out to property owners we will be stamping the envelopes with "Public Hearing Notice Enclosed." After hearing some of the problems about noticing I'm thinking we'll try another approach. I think there are a number of people receiving our notices with a GIS generated label and they pitch it in the recycle bin (right, everyone recycles paper like these) without a second glance. With the stamp, in red ink, maybe we can improve our attendance to public hearings or on the other hand, minimize the number of folks complaining they didn't receive the notice, but only heard about it from their neighbor. Summer volunteered to take this to the next level and get what we need.

All for now. Have a great week! Almost forgot, "Happy New Fiscal Year!" (Sorry, no fireworks, not in the budget.)

There were a few speakers there even though we had a very good community outreach with a letter to the residents letting them know what we were recommending to the BOS and a link to our staff report. The BOS had a few questions and then by formal action sent the project back to the PC.

At the PC hearing, we had a full agenda, starting at 9 and finished just before 2, with only two 10 minute breaks. What a day. I should have known when the first item comes off consent and lasts an hour. Didn't see that coming. Followed that with the general plan conformities (GPC) (two of them) Matt S. has been processing for the SFPUC. The first one lasted an hour (and it was on consent too), with a number of good issues brought up by the public including the current tenants (horse keeping and stables) on a portion of the property that will require their relocation. Our PC wanted more efforts by the SFPUC for the horse owners' needs. Matt's second GPC was a carry over from last month. No comment, questions, etc. and this one was over in 10 min. Next up, State of CA for a CDP out north of Montara at Grey Whale Cove State Beach. This was James' project, where Caltrans let the permit lapse and they didn't obtain an extension from us. Not much to discuss here. Follow that with Mike S.'s new CEQA checklist. We are making progress on this, but still more to do. Like go research what other Coastal Counties have done and see what we can adapt (copy) for our use. This one was continued to a date uncertain. Now the best one, the chicken ordinance. This one is now on its way to the BOS. Good work Tiare! A few speakers for and one family against. I understood the family against the ord. and their frustration. They happen to be living next door to the chicken owner from \*\*\*\*. Very good points made and we will be returning to the PC in a year with a status report on any noise/odor complaints we receive and how they were handled. And last up, Summer's Use Permit renewal for a fish processing facility in Princeton. Problems with this one focus around the number of employees on site because of the "AO" (Airport Overlay) zone limiting the number of people on site at any one time. PC continued this one to Sept. for us to do some AO research and opportunities and to allow the owner to clean up his operation and obtain permits for construction and an illegal roof enclosure.

I had a number of "take-a-ways" from the PC hearing I shared with the Planners who attended the "Post PC Evaluation" at the end of the day. Most were project specific, but one over all one I want to share with

everyone is this. For all public hearing notices going out to property owners we will be stamping the envelopes with "Public Hearing Notice Enclosed." After hearing some of the problems about noticing I'm thinking we'll try another approach. I think there are a number of people receiving our notices with a GIS generated label and they pitch it in the recycle bin (right, everyone recycles paper like these) without a second glance. With the stamp, in red ink, maybe we can improve our attendance to public hearings or on the other hand, minimize the number of folks complaining they didn't receive the notice, but only heard about it from their neighbor. Summer volunteered to take this to the next level and get what we need.

All for now. Have a great week! Almost forgot, "Happy New Fiscal Year!" (Sorry, no fireworks, not in the budget.)

Hope you all had an enjoyable fourth of July and a day off!

Last week was the week for public hearings. We had one with the Business License Committee, one with the Board of Supervisors, and the third with the Planning Commission. At the BLC, we had two minor permits with no issue and both were on consent. Done in five minutes. Given the Committee's summer schedules, we will not be meeting in July. As for the BOS, we had two items with them. The first was the High Speed Rail Project followup with a revised draft letter for the High Speed Rail Authority to consider as part of their public comment period they have on the Draft Alternatives Report. Supervisor Groom had some good comments that Matt S. captured and we issued the BOS' letter with President Gordon's signature. The second BOS item with the Dennis Thomas Project/Ascension Heights. We asked the BOS to remand the project back to the PC to consider an alternative design and revised environmental document (recirculated EIR). There were a few speakers there even though we had a very good community outreach with a letter to the residents letting them know what we were recommending to the BOS and a link to our staff report. The BOS had a few questions and then by formal action sent the project back to the PC.

At the PC hearing, we had a full agenda, starting at 9 and finished just before 2, with only two 10 minute breaks. What a day. I should have known when the first item comes off consent and lasts an hour. Didn't see that coming. Hi Jim,

As you may recall, I manage a blog for the residents of the unincorporated area called SMCNews. Here's the link:

[www.smcnews@wordpress.com](http://www.smcnews.wordpress.com)

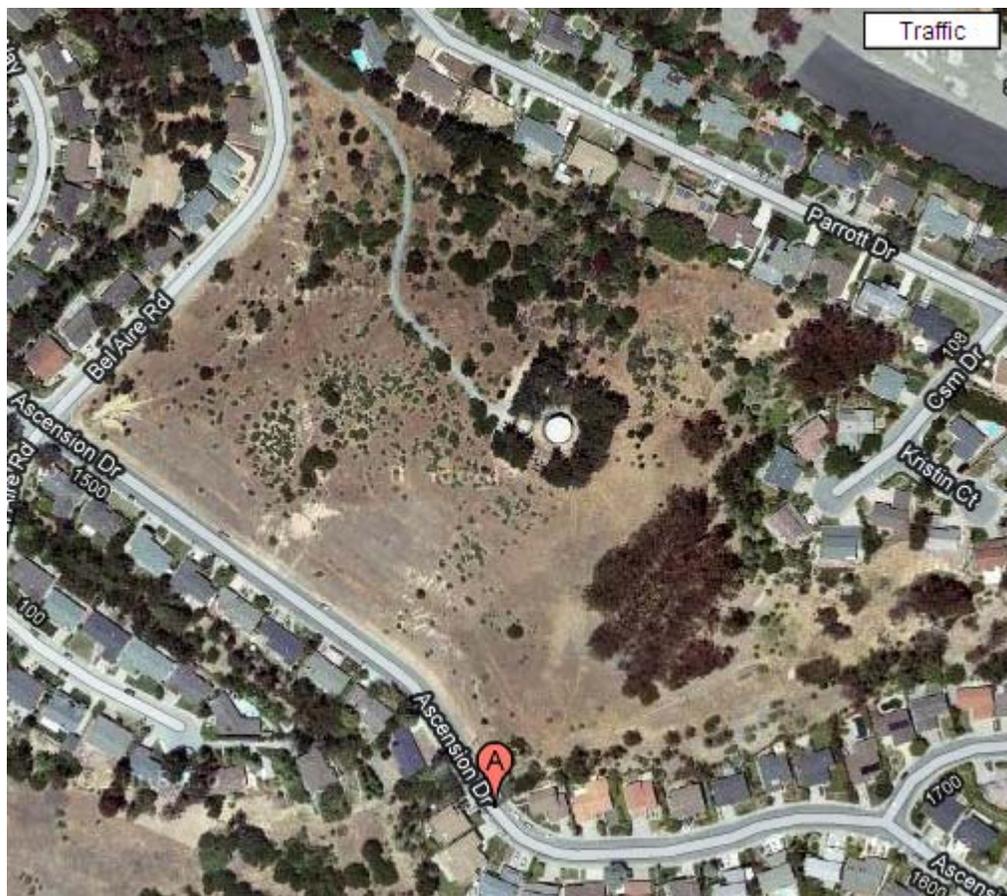

Our summer interns, Marcus Bell and Ashley Theisen, have written two entries on issues related to Planning that were discussed during the June 29th Board meeting: High Speed Rail in North Fair Oaks and the Ascension Heights subdivision proposal.

Before we post them, could you or your staff review and approve them? Also, you should know that the blog is interactive, so we may get comments. Comment authors on SMC News must identify their name and e-mail to leave a comment. If we do receive comments on these entries, we will refer them to Planning staff.

Thank you,  
Liz Henton  
County Manager's Office  
ext. 1949

### Ascension Heights

On December 9, 2009, the Planning commission reviewed a Draft Environmental Impact Report (DEIR) for a 27 plot subdivision on an undeveloped 13.25 acre hill off of Ascension drive, in the unincorporated community of Highlands Baywood Park.

The proposed Ascension Heights subdivision would have created 25 single family residences on the hillside. At the December 9<sup>th</sup> Planning Commission meeting, neighbors expressed concerns for the proposed project and the

Planning Commission denied approval of the DEIR citing nonconformance to specific General Plan policies, drainage and erosion impacts, and visual impacts. On December 23, 2009, the applicant filed an appeal of the Planning Commission's decision and submitted a revised plan that was altered to reflect the Planning Commission concerns.

On June 29, 2010, Planning director Jim Eggemeyer recommended that the Board of Supervisors send the revised plan back to the Planning Commission to evaluate the environmental impact of the new project and its compliance with CEQA, the California Environmental Quality Act. The Board voted in favor of remanding the proposal back to the Planning commission.

## High Speed Rail – North Fair Oaks

Planning Director Jim Eggemeyer has submitted a letter to the High Speed Rail Authority (HSR) outlining the potential impacts of the rail line on the unincorporated North Fair Oaks neighborhood. At the Board of Supervisor's meeting on June 29<sup>th</sup>, Eggemeyer discussed how public comments offered at workshops held by the Board of Supervisors on June 8<sup>th</sup> and at the North Fair Oaks Community Council meeting on June 17<sup>th</sup> were incorporated in the feedback provided to the HSR.

At the public meetings, residents of the North Fair Oaks area spoke of the safety hazards, public disruption and the need to study alternatives to current plans to construct the high speed rail line along the current Caltrain route.

The letter submitted to the HSR included the following community concerns:

- Negative impacts on Garfield School
- Construction impacts on residential streets
- Impacts on access as the proposed rail line would divide the neighborhood
- Coordination with other rail projects (e.g. Dumbarton Community Rail)
- Diesel pollution, use of electrical power, and safety

The letter also discussed the Board's request that further consideration of below-grade or trench alternatives be considered for North Fair Oaks so that the community be treated similarly to surrounding neighborhoods. . To read the letter submitted to the High Speed Rail Authority go to:

Dear Board Members,

We plan to issue the following news release on the Ascension project on Friday. Please let me know if you have any questions or concerns. Best,

Marshall

REDWOOD CITY, Calif. – Members of the community are invited to help planners design a process for public review of a proposed development in the San Mateo Highlands by attending the Wednesday, July 28, meeting of the Planning Commission. The proposed development, called Ascension Heights, was denied by the Planning Commission in December 2010. The developer is now revising the original 25-lot proposal, and staff planners expect a revised application will be submitted within six to nine months. Under the direction of the Board of Supervisors, County planners want to ensure that community members can provide their ideas and review the proposed revisions as early as possible. That is why planners are inviting the public to Wednesday's meeting to help shape the review process. "We will share our ideas for engaging residents but, more important, we want to hear ideas and recommendations," said Community Development Director Jim Eggemeyer. "We are committed to designing a review process that the community wants, not what we think the community wants." The Ascension Heights project is proposed for approximately 13 acres bordered on the west by Bel Aire Road, Ascension Drive to the south and single-family homes to the north and west. It is located about a quarter-mile from the College of San Mateo. The developer first submitted an application to the Planning and Building Department in 2002. The Planning Commission rejected the project's draft environmental impact in December 2009 over concerns about drainage, erosion and visual impacts. The developer appealed the Commission's decision to the Board of Supervisors. The Board then sent the project back to the planning staff to begin a review process for a revised application. Planners are committed to holding public workshops and posting all information about the project on the County's website. What the community wants will help shape the review process. Wednesday's meeting will be at 9 a.m. in the Board of Supervisors Chambers, 400 County Center, Redwood City. Metered parking is available on the nearby streets or in the County parking garage at Veterans Boulevard and Middlefield Road. If you have any questions or are unable to attend and wish to share your ideas, contact planner James Castaneda at (650) 363-1853, or by e-mail at [jcastaneda@co.sanmateo.ca.us](mailto:jcastaneda@co.sanmateo.ca.us) More information can be found at [www.smcplanning.org/ascension](http://www.smcplanning.org/ascension)

Dear Board Members,

We plan to issue the following news release on the Ascension project on Friday. Please let me know if you have any questions or concerns. Best,

Marshall

REDWOOD CITY, Calif. – Members of the community are invited to help planners design a process for public review of a proposed development in the San Mateo Highlands by attending the Wednesday, July 28, meeting of the Planning Commission.

The proposed development, called Ascension Heights, was denied by the Planning Commission in December 2010. The developer is now revising the original 25-lot proposal, and staff planners expect a revised application will be submitted within six to nine months.

Under the direction of the Board of Supervisors, County planners want to ensure that community members can provide their ideas and review the proposed revisions as early as possible. That is why planners are inviting the public to Wednesday's meeting to help shape the review process.

"We will share our ideas for engaging residents but, more important, we want to hear ideas and recommendations," said Community Development Director Jim Eggemeyer. "We are committed to designing a review process that the community wants, not what we think the community wants."

The Ascension Heights project is proposed for approximately 13 acres bordered on the west by Bel Aire Road, Ascension Drive to the south and single-family homes to the north and west. It is located about a quarter-mile from the College of San Mateo.

The developer first submitted an application to the Planning and Building Department in 2002. The Planning Commission rejected the project's draft environmental impact in December 2009 over concerns about drainage, erosion and visual impacts. The developer appealed the Commission's decision to the Board of Supervisors. The Board then sent the project back to the planning staff to begin a review process for a revised application.

Planners are committed to holding public workshops and posting all information about the project on the County's website. What the community wants will help shape the review process.

Wednesday's meeting will be at 9 a.m. in the Board of Supervisors Chambers, 400 County Center, Redwood City. Metered parking is available on the nearby streets or in the County parking garage at Veterans Boulevard and Middlefield Road.

If you have any questions or are unable to attend and wish to share your ideas, contact planner James Castaneda at (650) 363-1853, or by e-mail at [jcastaneda@co.sanmateo.ca.us](mailto:jcastaneda@co.sanmateo.ca.us)

Dear Board Members,

We plan to issue the following news release on the Ascension project on Friday. Please let me know if you have any questions or concerns. Best,

Marshall

**REDWOOD CITY, Calif.** – Members of the community are invited to help planners design a process for public review of a proposed development in the San Mateo Highlands by attending the Wednesday, July 28, meeting of the Planning Commission.

The proposed development, called Ascension Heights, was denied by the Planning Commission in December 2010. The developer is now revising the original 25-lot proposal, and staff planners expect a revised application will be submitted within six to nine months.

Under the direction of the Board of Supervisors, County planners want to ensure that community members can provide their ideas and review the proposed revisions as early as possible. That is why planners are inviting the public to Wednesday's meeting to help shape the review process.

“We will share our ideas for engaging residents but, more important, we want to hear ideas and recommendations,” said Community Development Director Jim Eggemeyer. “We are committed to designing a review process that the community wants, not what we think the community wants.”

The Ascension Heights project is proposed for approximately 13 acres bordered on the west by Bel Aire Road, Ascension Drive to the south and single-family homes to the north and west. It is located about a quarter-mile from the College of San Mateo.

The developer first submitted an application to the Planning and Building Department in 2002. The Planning Commission rejected the project's draft environmental impact in December 2009 over concerns about drainage, erosion and visual impacts. The developer appealed the Commission's decision to the Board of Supervisors. The Board then sent the project back to the planning staff to begin a review process for a revised application.

Planners are committed to holding public workshops and posting all information about the project on the County's website. What the community wants will help shape the review process.

Wednesday's meeting will be at 9 a.m. in the Board of Supervisors Chambers, 400 County Center, Redwood City. Metered parking is available on the nearby streets or in the County parking garage at Veterans Boulevard and Middlefield Road.

If you have any questions or are unable to attend and wish to share your ideas, contact planner James Castaneda at (650) 363-1853, or by e-mail at [jcastaneda@co.sanmateo.ca.us](mailto:jcastaneda@co.sanmateo.ca.us)

Another attempt at Highlands housing July 27, 2010, 03:42 AM By Michelle Durand Daily Journal Staff

A proposal to construct houses in a steep section of the San Mateo Highlands now in its eighth year in the public planning process is heading back to county officials who, this time, want the public to help review the latest revisions.

"We are committed to designing a review process that the community wants, not what we think the community wants," said Community Development Director Jim Eggemeyer in a written statement.

The project, known as Ascension Heights, is proposed for a 13.25-acre section approximately a quarter-mile from the College of San Mateo and bordered by Bel Aire Road, Ascension Drive and single family homes.

The project is predominately located on a hillside where the slopes average 40 percent. The area was graded more than 40 years ago but surface runoff caused erosion along Ascension Drive over time.

The first proposal was for 26 houses and one 40-unit condominium on 97 acres — a plan that in 2004 worried the community about landslides like one that tumbled homes on Rainbow Drive.

The developer is creating another scaled-down version. The latest proposal called for 25 single-family dwellings on 27 parcels.

The project won't reach the Planning Commission for final consideration for approximately six to nine months. In the meantime, county officials are asking the public to tell them how they want the controversial plan analyzed and is holding a meeting Wednesday morning to cull ideas for the process.

The proposed development is in its eighth year of applications, rejections, appeals and reviews.

The developer first submitted an application in 2002 and the Planning Commission rejected its draft environmental impact review in December 2009 because of worry over drainage, erosion and aesthetics. The developer appealed the decision to the Board of Supervisors which sent the project back to planning staff for a revised application.

The public process kicked off by Wednesday morning's meeting will help form that application. County staff hope for an open house in the Highlands neighborhood and at least two workshops.

Those who are unable to attend Wednesday's commission meeting but wish to comment can contact Planner James Castaneda at 363-1853 or [jcastaneda@co.sanmateo.ca.us](mailto:jcastaneda@co.sanmateo.ca.us).

More information can be found at [www.smcplanning.org/ascension](http://www.smcplanning.org/ascension).

Hi Shauna,

If community workshops are one of the recommendations to the Planning Commission tomorrow, then we'll certainly be in touch. I've copied Jim Eggemeyer on this email, so he'll be aware of the offer.

Thanks,

Peggy

>>> "Shauna Wilson Mora" <swilson@pcrcweb.org> 7/27/2010 10:52 AM >>>

Hi Peggy,

I read in the Daily Journal today that the County is considering a public input process for the proposed Ascension Heights development in the Highlands. Would the County be interested in PCRC assisting with community workshops?

When we have done similar community workshops for Redwood City, Daly City and Menlo Park the developer paid for the workshops.

Let me know if you'd like to discuss this further.

Thanks,

Shauna

Hi Shauna,

If community workshops are one of the recommendations to the Planning Commission tomorrow, then we'll certainly be in touch. I've copied Jim Eggemeyer on this email, so he'll be aware of the offer.

Thanks,

Peggy

>>> "Shauna Wilson Mora" <swilson@pcrcweb.org> 7/27/2010 10:52 AM >>>

Hi Peggy,

I read in the Daily Journal today that the County is considering a public input process for the proposed Ascension Heights development in the Highlands. Would the County be interested in PCRC assisting with community workshops?

When we have done similar community workshops for Redwood City, Daly City and Menlo Park the developer paid for the workshops.

Let me know if you'd like to discuss this further.

Thanks,  
Shauna

James and all,

You might know this already. I happen to talk to someone in County manager's office, and found they operate the Unincorporated Areas Blog called SMC News, which covers a lot of planning issues/projects, including your Ascension Heights Project

<http://smcnews.wordpress.com/>

I feel we can partnership with County manager's office to use the blog to better publicize issues currently under discussion in the Planning department.

Please take a look and let me know your thoughts.

Thanks

Annie

**Subject:** Counter Coverage Today, 3:30-5

Hey everyone, I know we're short staff today, but I have a meeting with the Jim and Ascension Heights I couldn't scheduled from any other time. I'm on counter this afternoon, and need to see if someone can cover the last half from 3:30 to 5 (or earlier if the meeting lets out sooner). I'd be happy to trade where possible. Sorry for the last minute request.

JAMES

**To:** PIngBldg@co.sanmateo.ca.us  
**CC:** JCastaneda@co.sanmateo.ca.us; JEggemeyer@co.sanmateo.ca.us  
**Date:** 1/2/2011 11:16 PM  
**Subject:** PLN NO: PLN 2009-00312 Attn: Summer Burlison, Project Planner

I am providing a comment objecting to the Negative Declaration proposal to place new Verizon communication antennas at 1452 Bel Aire Rd, San Mateo. My comments are as follows:

1) There appear to be at least three or four parties interested in locating additional antennas on this hill top. We ask the County to assume an active role in managing all requests to form a single, integrated plan minimizing both visual disruption and safety aspects of this antenna site. We believe this proposal should be delayed until the long-term intentions of all interested parties are collected and analyzed creating a cohesive and comprehensive proposal that will minimize the impacts of proposed antennas from all entities. Verizon has prepared a 10-year plan and it is reasonable to require all other interested parties to do the same.

2) The Ascension Heights Subdivision project is described in the Notice but no assessment of human safety is addressed. The project will build homes immediately adjacent on at least two sides of the Ca. Water Service Company property housing the antennas. How many additional antennas will be constructed by all other parties and what will their microwave output be? What microwave intensities will irradiate any potential new homeowner--in their yard? In their home? Are these levels of microwave radiation known to be safe to humans over a lifetime or during fetal gestation? To receive a determination of a "Negative Declaration", I submit the maximum radiation levels at the surrounding fences, or within homes, must be used in all health impact calculations.

3) The current pine trees surrounding the water tank were planted specifically to shield the tank from the 360 degree view of the hilltop, including Interstate 280. After at least 30 years of growth, these pine trees have done so successfully. The proposal to remove "six significant sized pine trees to accommodate an on-site fire access turn around" will produce a dramatic, negative visual impact. In the proposal there is no indication which trees are to be removed but since there are probably fewer than 12-15 significant pine trees, this would result in uncovering the tank in nearly a 180 deg arc. The neighborhood certainly doesn't consider this an 'insignificant impact'.

4) What mitigations or other approaches might be considered?

a) If the new housing development is built, the access road to the water tank undoubtedly would be modified and very likely make the current plans for a fire access turn around unworkable or inefficient. It is possible the Ascension Heights Subdivision will provide a turn around that will be adequate for the fire department, making this on-site turn around unnecessary.

b) The neighborhood must be involved in all plans for tree removal, including specific tree selection and alternate turn around options.

c) If any trees ultimately are removed, the size, type and location of replacement trees must be specified in collaboration with the neighborhood. Ten or fifteen foot replacement trees will be substantially inadequate.

d) Every replacement trees must remain alive, health and growing for as long as the companies use the hill top. Failure to maintain the trees must invoke substantial penalties for all parties and eventual removal of antennas.

Thank you for your consideration of this objection.

Sincerely,

Jerry,

I have spoken to Mr. Thomas regarding rescheduling the meeting, and the meeting will remain scheduled for today to continue to discuss the visual issues of the project as discussed at our last meeting. The tentative meeting date of January 10, 2011 had been indicated on the 11/22/2010 write-up. The next meeting is tentative scheduled for January 31, 2011 (as also indicated on the 11/22/2010 write-up). I'm willing to move this up to January 24th as I do have some availability, however we will start introducing our next topics. The visual topics will be revisited at Mr. Thomas' discretion.

While I understand staff has indicated we would do our best to provide you information as quickly as possible, due to time constraints and the topic to be discussed, it was not necessary to provide a write up for this meeting and only sent out the illustrations provided. I would like to point out that at the last meeting many individuals in attendance were supportive of continuing to have frequent meetings immaterial of the amount of new materials received in favor of continuing the dialog. At the end of that meeting, you yourself had assured me that circulating the materials before the December 13, 2010 meeting wouldn't be issue as long as it was before the weekend. The materials that would have been sent prior to that meeting are the same as what was sent out for today's meeting.

As I expressed in yesterday's email, continuing to have today's meeting would be beneficial to all parties, even if your group isn't ready to provide feedback. Viewing the live modeling and illustrations would have allowed the group to consider such (along with the sent materials) to provide feedback at the following next meeting. This is an attempt to keep the conversation and discussion moving, which seems to be echoed by all involved.

The meeting will continue as scheduled. Please forward this to any other members of the group who may not have other commitments and wish to attend. Otherwise, the next meeting is tentatively scheduled for January 31, 2011. Again, I can accommodate moving this meeting up to January 24<sup>th</sup>, but I will need to know that by 9am tomorrow in order to make the appropriate arrangements.

JAMES

James,

it appears that very few, if any people will be able to make the meeting tomorrow. Since we understood there would be a weeks lead time for any material provided, a significant number of people have made other commitments. I suggest rescheduling the meeting.

A couple of us have reviewed the drawings and find the contours add a substantial amount of new information. The 3-D images are very interesting but to fully appreciate them, we need to have scaled

houses placed on their lots. Can this be done before our next meeting?

Thank you,

Jerry

At the end of that meeting, you yourself had assured me that circulating the materials before the December 13, 2010 meeting wouldn't be issue as long as it was before the weekend. The materials that would have been sent prior to that meeting are the same as what was sent out for today's meeting.

As I expressed in yesterday's email, continuing to have today's meeting would be beneficial to all parties, even if your group isn't ready to provide feedback. Viewing the live modeling and illustrations would have allowed the group to consider such (along with the sent materials) to provide feedback at the following next meeting. This is an attempt to keep the conversation and discussion moving, which seems to be echoed by all involved.

The meeting will continue as scheduled. Please forward this to any other members of the group who may not have other commitments and wish to attend. Otherwise, the next meeting is tentatively scheduled for January 31, 2011. Again, I can accommodate moving this meeting up to January 24<sup>th</sup>, but I will need to know that by 9am tomorrow in order to make the appropriate arrangements.

JAMES

James,

it appears that very few, if any people will be able to make the meeting tomorrow. Since we understood there would be a weeks lead time for any material provided, a significant number of people have made other commitments. I suggest rescheduling the meeting.

A couple of us have reviewed the drawings and find the contours add a substantial amount of new information. The 3-D images are very interesting but to fully appreciate them, we need to have scaled houses placed on their lots. Can this be done before our next meeting?

Thank you,

Jerry

Not really. I have a 2 - 3 with Steve M. and Sarah Rosendahl from Sup. Horsley's Office to talk about Princeton land use planning. Then at 3 you and I have a meeting with James about Dennis Thomas/Ascension Heights project for 30 min. So how about 3:30?

Just let me know.

Thanks.

Tim,

I have an appointment in the morning on 12/20 down the Peninsula, so it would be very convenient if we could schedule the meeting on the afternoon of 12/20. Would 2pm work for you? Even if Mr. Eggemeyer can't attend, it is critical that we have a discussion about the legal issues so that ExteNet is able to move forward with its project as soon as the Section 320 deviation is granted in January.

Thanks, Anita

On 12/14/2011 8:45 AM, Anita Taff-Rice wrote:

Tim,

Thanks for your time yesterday to discuss ExteNet's proposed telephone network project on Highway 35. I am writing to request that you reply to this email and/or send a letter to myself and Helen Mickiewicz copied on this email clarifying that the letter sent by Mr. Jim Eggemeyer to the California Public Utilities Commission dated December 1, 2011 was not intended to oppose ExteNet's request for a deviation from Section 320 of the Public Utilities Code. Rather, you indicated that Mr. Eggemeyer intended only to notify the CPUC of his opinion that ExteNet is not exempt from San Mateo County ordinances applicable to the project.

As I indicated to you yesterday, it is and always has been ExteNet's position that San Mateo County's wireless ordinance (Chapter 24.5) and associated architectural review ordinance (Chapter 28) is not applicable to ExteNet because it is not a wireless carrier as defined in the ordinance. ExteNet is a telephone corporation certified by the CPUC to provide fiber optic telecommunications transport services (please see attached certificate of public convenience and necessity -- at that time ExteNet operated under the name Clearlinx Network Corp). Although ExteNet's distributed antenna system (DAS) network accepts a wireless handoff, it converts the signal to optical and carries the signal on fiber optic cable. The CPUC determined in the draft resolution approving ExteNet's Section 320 deviation that it is a telecommunications carrier, **not** a wireless carrier. Thus, it is ExteNet's position that all necessary aesthetic and environmental review is properly handled by the CPUC through its CEQA review as lead agency, and through its Section 320 analysis. ExteNet explained its regulatory status

and the inapplicability of San Mateo County's wireless ordinance to Mr. Eggemeyer in a letter in 2009 (please see attached letter). ExteNet did does not dispute that it must obtain excavation and encroachment permits for its construction, but because the project is located in Caltrans rights-of-way, it was and is our understanding that San Mateo County chose to defer to Caltrans' review for the issuance of such permits.

I appreciate the opportunity to discuss this matter with you and Mr. Eggemeyer further at a meeting with myself, you and Mr. Eggemeyer early next week. In the interim, I would appreciate an immediate response regarding the clarification of Mr. Eggmeyer's December 1 letter, as it has created confusion at the CPUC sufficient to cause staff there to remove an order granting the Section 320 deviation request from its December 15, 2011 agenda. This confusion has caused ExteNet substantial harm, and we wish to take steps to address this confusion before the holidays so that we can ensure our order will be placed on the January 12, 2012 agenda.

Please let me know if you have any questions about this matter, and I look forward to your immediate response to this email.

Thanks, Anita

**Date:** 5/11/2012 11:15 AM  
**Subject:** RE: MidPen WMA Contract Amendment Process

Hi Lisa and Jim,

For the June 26 hearing, June 11 is the day the report would be due to the County Manager's Office for Agenda Review. As we will need to include a discussion of Ag Advisory comments in the report, that will not work.

Lets shoot for July 10 (date subject to Jim's approval). A controversial project may be going forward on that day as well so I will leave this up to Jim (contract for Ascension Heights EIR).

If July 10th flies, I would need contract amendments and revisions to Neg Dec by May 22.

Let's see what Jim says.

Thanks

Hi Camille,

Our proposed schedule to amend the contracts is below:

Next week: District revises MND and submits applications and fees for Mindego, Silva, and potentially the El Corte de Madera Creek parcels

June 4: District consults with Farm Bureau

June 11: District consults with Ag Advisory Committee

June 13: District Board certifies MND

June 26 (??): County Board of supervisors considers contract amendments

July ? Planning commission considers permit approvals

Does this look good to you? I wanted to confirm that we are on the June 11 Ag Advisory Agenda (Mike

Williams) and if June 26 works for the Board.

Thanks!  
Lisa

Subject: Re: MidPen WMA Contract Amendment Process

Hi Lisa,

County Counsel and everyone else has reviewed the process outlined below. The only comment was that the Williamson Act only allows for amendment under Section 51253 (see below). Please include in your submittal a legal rationale for how the project qualifies for an amendment per this Section. MROSD will need to obtain a copy of the amendments made at that session and prove conformance (compatible uses are allowed and include public recreation).

51253. Amendment of prior contracts to conform to amended chapter. Any contract or agreement entered into pursuant to this chapter prior to the 61st day following final adjournment of the 1969 Regular Session of the Legislature may be amended to conform with the provisions of this act as amended at that session upon the mutual agreement of all parties. Approval of these amendments to a contract by the Director of Conservation shall not be required.

Thanks!

Hi Melissa and James,

MidPen wants to amend the WMA contract for 2 properties. They will be filing a formal application shortly. Please note Farm Bureau and Ag Advisory Dates below. Will these dates work for our review?

Lets talk about process when you get a chance :) I put together the following outline of my guess at the process:

- 1) File application and pay fees
- 2) MidPen to revise Neg Dec (in no particular order)
  - County to send referral to Dept. of Conservation (Maybe not necessary per Section 51253??? Anyone else?)
  - Farm Bureau and Ag Advisory review (due to Memorandum of Understanding)
  - County to write Staff Report
- 3) MidPen to certify MND
- 4) Board to review Contract Amendment
- 5) Regular Project review (RM projects, etc.)

Did I miss anything?

Thanks!!

Hi Camille,

We have drafted an amendment to the silva-Kenyon and Mindego contracts pursuant to WA section 51253. It is going thru review here and then we will send it over. Pls remind me of the process assuming this method is acceptable to your team. We are on the Farm Bureau agenda for May 7 and may try for the May 14 meeting of Ag Advisory.

Thanks,

Lisa

**Subject:** Upcoming Ascension Heights subdivision

Good afternoon Supervisor Pine,

I wanted to take a moment and point out an agenda item on the upcoming March 26th Board meeting for a forthcoming project in your district. The Ascension Heights subdivision, a 19-lot subdivision in the San Mateo Highlands area, requires an Environmental Impact Report to be circulated. The item on Tuesday's consent calendar will be to accept a contract authorizing a consultant team to start that effort in mid-April. At the conclusion of that process, we'll proceed to present the project to the Planning Commission for their consideration, which is projected for the end of the year.

To provide you with a brief background, the applicant (Dennis Thomas) has been working on this project since 2002, which was originally for 25-lots. The project was met with significant opposition from the community and in December 2009, the Planning Commission denied the project (as well as the EIR that accompanied it). The applicant has since revised his plan to reduce the number of lots to 19 in attempts to address concerns raised by the community. As such, the revised plan requires a new EIR.

Again, I wanted to take the opportunity to give you a heads up that the adoption of the contract will signal the start of the review process which will most likely receive attention within the community in the coming months. Both Jim and I are available to sit and discuss the history and particulars of the project further if you wish. Feel free to contact me to answer with any questions you have.

Regards,  
JAMES

Gerard,

I was in meetings all day today and I am just seeing your email now.

I believe your request to have this matter withdrawn from tomorrow's Board of Supervisors' meeting agenda is a reasonable one.

I would suggest that we schedule a call or a meeting with Planning Director Jim Eggemeyer and/or James Castañeda (the planner on the project) to discuss: (1) how to most efficiently obtain your input on the Analytical Environmental Services contract and the Statement of Work; and (2) when the matter should be scheduled to come back to the Board of Supervisors for consideration.

I will call or email you again following the Board of Supervisors' meeting on Tuesday. I would appreciate it if you would forward me your cell phone number.

To: The Honorable Dave Pine, Vice President San Mateo County Board of Supervisors  
 Re: Request to withdraw Board of Supervisors Tuesday, March 26, 2013 Consent Agenda item 24

Dear Dave,

We request that you have Board of Supervisors Tuesday, March 26, 2013 agenda item 24 listed on the consent agenda withdrawn.

Agenda Item 24 has been placed on the consent agenda as: Planning and Building, Item 24.

- A) Resolution authorizing an agreement with Analytical Environmental Services to prepare Draft and Final Environmental Impact Reports for the Ascension Heights Subdivision
- B) Resolution authorizing transfer in the amount of \$113,075 from unanticipated revenue to Contract

Services (4/5ths vote required)

Neither Baywood Park nor San Mateo Oaks Homeowners Associations, immediately adjacent to the project, were notified in advance that a proposed contract Statement of Work had been prepared for resolution authorizing an agreement with Analytical Environmental Services to prepare Draft and Final Environmental Impact Reports for the Ascension Heights Subdivision. Consequently, we have not had an opportunity to fully review it or provide our input.

We also request your support to return to the agreed upon procedures ensuring full communication with our communities specifically with respect to the Ascension Heights Subdivision project. Although the community, developer and Planning devoted extensive time to the exchange of issues, the most important next step is an appropriately specified Statement of Work directing the creation of the Draft and Final EIR. The current Statement of Work contains substantial deficiencies, ignoring serious issues raised in the many meetings with the developer and the December 2009 Planning Commission meeting with 400+ residents at CSM. In 2009 the Board of Supervisors directed that District One residents be involved throughout the entire process to derive an acceptable solution. The deficiencies inherent in this Statement of Work portend a repeat of the previous failure.

Dave, we ask you to intervene on behalf of District One residents to withdraw this resolution from the March 26<sup>th</sup> agenda for a minimum of 2 months. The community needs sufficient time to participate in the Statement of Work specifications to ensure the EIR adequately represents community concerns. This project has been actively developed for over a decade posing significant adverse impacts on this community and its surroundings and we strongly believe this request is both critical and eminently reasonable.

Thank you for your consideration,

Gerard Ozanne, President

Baywood Park Homeowners' Association

cc: The Honorable Don Horsley, President San Mateo County Board of Supervisors

Gerard,

I was in meetings all day today and I am just seeing your email now.

I believe your request to have this matter withdrawn from tomorrow's Board of Supervisors' meeting agenda is a reasonable one.

I would suggest that we schedule a call or a meeting with Planning Director Jim Eggemeyer and/or James Castañeda (the planner on the project) to discuss: (1) how to most efficiently obtain your input on the Analytical Environmental Services contract and the Statement of Work; and (2) when the matter should be scheduled to come back to the Board of Supervisors for consideration.

I will call or email you again following the Board of Supervisors' meeting on Tuesday. I would appreciate it if you would forward me your cell phone number.

Re: Request to withdraw Board of Supervisors Tuesday, March 26, 2013 Consent Agenda item 24

Dear Dave,

We request that you have Board of Supervisors Tuesday, March 26, 2013 agenda item 24 listed on the consent agenda withdrawn.

Agenda Item 24 has been placed on the consent agenda as:

Planning and Building, Item 24.

A) Resolution authorizing an agreement with Analytical Environmental Services to prepare Draft and Final Environmental Impact Reports for the Ascension Heights Subdivision

B) Resolution authorizing transfer in the amount of \$113,075 from unanticipated revenue to Contract Services (4/5ths vote required)

Neither Baywood Park nor San Mateo Oaks Homeowners Associations, immediately adjacent to the project, were notified in advance that a proposed contract Statement of Work had been prepared for resolution authorizing an agreement with Analytical Environmental Services to prepare Draft and Final Environmental Impact Reports for the Ascension Heights Subdivision. Consequently, we have not had an opportunity to fully

review it or provide our input.

We also request your support to return to the agreed upon procedures ensuring full communication with our communities specifically with respect to the Ascension Heights Subdivision project. Although the community, developer and Planning devoted extensive time to the exchange of issues, the most important next step is an appropriately specified Statement of Work directing the creation of the Draft and Final EIR. The current Statement of Work contains substantial deficiencies, ignoring serious issues raised in the many meetings with the developer and the December 2009 Planning Commission meeting with 400+ residents at CSM. In 2009 the Board of Supervisors directed that District One residents be involved throughout the entire process to derive an acceptable solution. The deficiencies inherent in this Statement of Work portend a repeat of the previous failure.

Dave, we ask you to intervene on behalf of District One residents to withdraw this resolution from the March 26<sup>th</sup> agenda for a minimum of 2 months. The community needs sufficient time to participate in the Statement of Work specifications to ensure the EIR adequately represents community concerns. This project has been actively developed for over a decade posing significant adverse impacts on this community and its surroundings and we strongly believe this request is both critical and eminently reasonable.

Thank you for your consideration,

Gerard Ozanne, President

Baywood Park Homeowners Association

Carol,

The email thread below will provide you with some additional background on why I asked for the Ascension EIR contract to be removed from today's BoS meeting agenda.

We are scheduling a meeting with Planning staff and the neighborhood representatives to discuss the Statement of Work for the EIR contract. In his email below, Mr. Ozanne suggested that it would require a "*minimum of two months*" to revise the Statement of Work. I think it can be finalized much faster than that. Earlier this afternoon I spoke to Mr. Ozanne about this and asked that he provide a written summary of where he feels the Statement of Work is deficient.

I also spoke with Dennis Thomas a few minutes ago. He stated that an extensive "scoping" process for the project was completed in 2010. In his view the Statement of Work reflects the issues that were flagged by the community. He understands why I needed to remove the item from today's agenda, and just asked that we work expeditiously to get the contract back to the Board for approval.

I will keep you posted.

Dave

Earlier this afternoon I spoke to Mr. Ozanne about this and asked that he provide a written summary of where he feels the Statement of Work is deficient.

I also spoke with Dennis Thomas a few minutes ago. He stated that an extensive "scoping" process for the project was completed in 2010. In his view the Statement of Work reflects the issues that were flagged by the community. He understands why I needed to remove the item from today's agenda, and just asked that we work expeditiously to get the contract back to the Board for approval.

I will keep you posted.

Dave

Re: Request to withdraw Board of Supervisors Tuesday, March 26, 2013 Consent Agenda item 24

Dear Dave,

We request that you have Board of Supervisors Tuesday, March 26, 2013 agenda item 24 listed on the consent agenda withdrawn.

Agenda Item 24 has been placed on the consent agenda as:

Planning and Building, Item 24.

A) Resolution authorizing an agreement with Analytical Environmental Services to prepare Draft and Final Environmental Impact Reports for the Ascension Heights Subdivision

B) Resolution authorizing transfer in the amount of \$113,075 from unanticipated revenue to Contract Services (4/5ths vote required)

Neither Baywood Park nor San Mateo Oaks Homeowners Associations, immediately adjacent to the project, were notified in advance that a proposed contract Statement of Work had been prepared for resolution authorizing an agreement with Analytical Environmental Services to prepare Draft and Final Environmental Impact Reports for the Ascension Heights Subdivision. Consequently, we have not had an opportunity to fully review it or provide our input.

We also request your support to return to the agreed upon procedures ensuring full communication with our communities specifically with respect to the Ascension Heights Subdivision project. Although the community, developer and Planning devoted extensive time to the exchange of issues, the most important next step is an appropriately specified Statement of Work directing the creation of the Draft and Final EIR. The current Statement of Work contains substantial deficiencies, ignoring serious issues raised in the many meetings with the developer and the December 2009 Planning Commission meeting with 400+ residents at CSM. In 2009 the Board of Supervisors directed that District One residents be involved throughout the entire process to derive an acceptable solution. The deficiencies inherent in this Statement of Work portend a repeat of the previous failure.

Dave, we ask you to intervene on behalf of District One residents to withdraw this resolution from the March 26<sup>th</sup> agenda for a minimum of 2 months. The community needs sufficient time to participate in the Statement of Work specifications to ensure the EIR adequately represents community concerns. This project has been actively developed for over a decade posing significant adverse impacts on this community and its surroundings and we strongly believe this request is both critical and eminently reasonable.

Thank you for your consideration,

Gerard Ozanne, President

Baywood Park Homeowners' Association

Carol,

The email thread below will provide you with some additional background on why I asked for the Ascension EIR contract to be removed from today's BoS meeting agenda.

We are scheduling a meeting with Planning staff and the neighborhood representatives to discuss the Statement of Work for the EIR contract. In his email below, Mr. Ozanne suggested that it would require a "*minimum of two months*" to revise the Statement of Work. I think it can be finalized much faster than that. Earlier this afternoon I spoke to Mr. Ozanne about this and asked that he provide a written summary of where he feels the Statement of Work is deficient.

I also spoke with Dennis Thomas a few minutes ago. He stated that an extensive "scoping" process for the project was completed in 2010. In his view the Statement of Work reflects the issues that were flagged by the community. He understands why I needed to remove the item from today's agenda, and just asked that we work expeditiously to get the contract back to the Board for approval.

**Date:** 3/27/2013 12:27 PM  
**Subject:** Re: Ascension Heights - Next Steps

Good afternoon Jim,  
 Supervisor Pine also followed up with me yesterday evening regarding the next steps, and echoed those thoughts on coordinating a meeting as early as possible. I will request that his written summary be sent as soon as possible so I may ask AES to assist in explaining the scope of work. I suspect many of Mr. Ozanne's issues (particularly with air quality and emissions) are already considered within their proposal. If possible, I'd like to include AES to participate (if they're willing to participate) in a conference call in whatever meeting we have with Mr. Ozanne to help clarify how the process and evaluation will occur. I'll be calling AES later this afternoon to explain where we're at.

I'll effort a coordination as soon as I can this afternoon, as I'm working on the Roundtable packet for next week's meeting that must go out tomorrow afternoon.

As an aside (and I've already mentioned this to Steve), this is the exact unanticipated scenario that makes it extremely difficult to be attentive to high-profile projects that require immediate attention during time sensitive, routine Roundtable duties (particularly the two weeks leading up to a Roundtable meeting). For the time being, I can manage through the adoption of the contract, but we need to keep this in mind as we move forward with this project and the attention it'll start to receive. I'll be in the office tomorrow, so I'll follow up in person regarding how the coordination is going.

JAMES

**CC:** David Burruto; Dave Pine; Tim Fox; Jim Eggemeyer  
**Date:** 3/27/2013 3:27 PM  
**Subject:** Ascension Heights EIR Contract Meeting

Good afternoon Gerard,  
Per Supervisor Pine's communications with you, I'd like to schedule a meeting to sit down with staff regarding the statement of work for the contract on the Ascension Heights EIR. I have a few time slots that work for us:

Tuesday 4/2 at 2:00pm  
Thursday 4/4 at 2:00pm

At your earliest opportunity, please confirm which of these time slots will work best. If not, please provide me with your earliest, general availability to see where we can accommodate.

As suggested by Supervisor Pine, it would be helpful to receive your written summary of the deficiencies in the Statement of Work as soon as you can provide it as to help facilitate our discussion.

Regards,  
JAMES

**Subject:** Re: Ascension Heights EIR Contract Meeting

Hi James,  
Many of us are tied up or out of town due to Easter holidays. We will need at least until the week of April 8th. Can you provide possible times for that week?

Thanks,

Jerry

Jerry,  
For the week of April 8th, I can offer the following:

Monday 4/8 at 2:00pm  
Thursday 4/11 at 2:00pm

Let me know if either of those will work for you. Thanks.

JAMES

Jerry,  
I'm following up on Wednesday's email regarding possible meeting dates the week of April 8th. Again, I can offer the following:

Monday 4/8 at 2:00pm  
Thursday 4/11 at 2:00pm

Please respond as earlier as possible so I may continue to coordinate with those attending on our end. Thank you.

**Date:** 4/1/2013 1:38 PM  
**Subject:** Re: Ascension Heights EIR Contract Meeting

James,

Thanks for pushing to get this meeting scheduled.

You'll want to let Dennis Thomas know that (1) we won't be able to bring the item to the BoS meeting on April 8th (which is his hope), and (2) we will update him immediately after we meet with the Ascension neighbors.

My hope is that one meeting with the Ascension neighbors is all that will be needed here as the task at hand (entering into a contract to have an EIR prepared) is not a major one and should be relatively straightforward.

Dave

Jerry,  
 I haven't received confirmation from you as indicated, but I have scheduled the meeting on our end for Thursday, April 11, 2013 at 2:00pm in order to lock in a date/time. Please also send your written deficiencies summary at your earliest convenience. Greatly appreciate.

Regards,  
 JAMES

Ascension Heights Subdivision Project

(County File number PLN2002-00517)

Dear Dave,

With your support, on April 11, 2013 representatives of the Homeowners Associations within CSA1 met with Jim Eggemeyer and Tim Fox to discuss the content of the statement of work in the EIR consultant contract. During discussions we were told the County would benefit if the statement of work in the EIR consultant contract remained relatively non-specific to facilitate any future negotiations with the EIR consultant. In addition, because James Castaneda, County Planner for this project, was unable to attend the meeting, we were not able to discuss in depth the issues outlined in our letter of April 3, 2013.

Our experiences with the 2009 DEIR demonstrated Community input was totally ineffective in ensuring adequate analyses were included in the DEIR. When we identified confusing, incomplete, or missing analyses, our Public Comments were misconstrued, inadequately responded to, or determined to be 'out of scope' and not relevant with no meaningful justifications offered. We were informed the EIR consultant efforts had been completed and there were neither funds nor time for any further analyses. Ultimately, our input had no measurable influence on the DEIR contents, analyses or recommendations, leading to an inadequate DEIR.

Despite our discussion with Mr. Fox and Mr. Eggemeyer on April 11th—we certainly appreciate their efforts—the Community still believes strongly the EIR process will be improved substantially by incorporating our detailed concerns sufficiently early into the Initial Study/ADEIR/DEIR process while there are sufficient funds and time to produce accurate and relevant analyses.

For the above reasons, we request County Planning involve Community representatives in a detailed discussion of our concerns at several stages of the EIR process; specifically, insuring the Initial Study does not exclude important environmental issues, the ADEIR accurately represents the Community concerns, and sufficient analyses are incorporated into the DEIR to enable County Planning Commission and Board of Supervisors to make informed decisions.

We thank you for arranging this meeting, your continued interest, and look to your further assistance in this matter.

Jerry
