

PHOTO GLOSSARY

Preliminary Measures - Subject to Change

1

New Accessible Curb Ramps

New accessible Curb ramps will bring intersections and crosswalk up to the latest americans with disability act code requirements and provide safe and smooth walkways for pedestrians

2

Bulbout/Curb Extension

Bulbouts/Curb Extensions bring the curb into the street to shorten crossing distances and increase visibility for pedestrians and vehicles

3

Traffic Circle

Traffic circles require drivers to slow down on their approach in order to comfortably travel around the circle, increasing driver awareness and decreasing speeds creating a safer environment for pedestrians

4

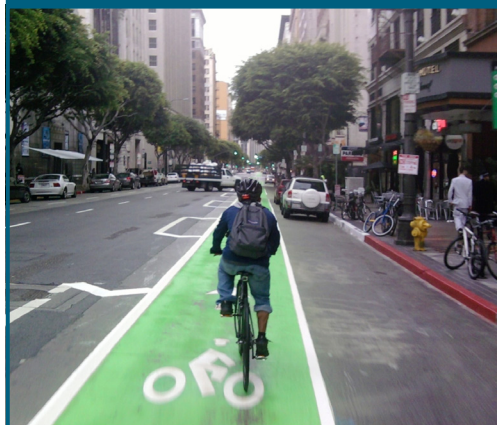

HAWK (High Intensity Activated Crosswalk)

A High-Intensity Activated Crosswalk Beacon (HAWK) is a pedestrian activated traffic control device used to stop oncoming motorists at crosswalks, creating a safer crossing environment for pedestrians.

5

Buffered Bike Lane

Buffered bike lanes enhance cyclist safety and comfort by providing a designated travel lane with a buffer area that adds separation from moving traffic. The bike lane will increase visibility of cyclists by drivers and allow cyclists room to maneuver within their line while avoiding conflict with parked car door zones and vehicular traffic.
